

Approved March 29, 1984
Date _____

MINUTES OF THE Senate COMMITTEE ON Energy and Natural Resources

The meeting was called to order by Senator Charlie L. Angell at
Chairperson

8:00 a.m. ~~XXX~~ on Wednesday, March 28, 1984 in room 123-S of the Capitol.

All members were present except:

Senator Paul Hess
Senator Ed Roitz

Committee staff present:

Ramon Powers, Research Department
Don Hayward, Revisor's Office
LaVonne Mumert, Secretary to the Committee

Conferees appearing before the committee:

Barbara Sabol, Secretary, Kansas Department of Health and Environment
Bill Bryson, Kansas Department of Health and Environment
Dennis Murphey, Kansas Department of Health and Environment
Matt Selby, Sierra Club
Marsha Marshall, Kansas Natural Resources Council
Bill Henry, Kansas Engineering Society
Jim Aiken, Kansas Engineering Society
Bruce Bodecker, Furley

Senator Werts moved that the minutes of the March 27, 1984 meeting be approved. Senator Vidricksen seconded the motion, and the motion carried.

H.B. 2725 - Ground burial of hazardous waste; prohibited

H.B. 2726 - Hazardous waste clean-up fund; established

Copies of "Hazardous Waste Generation and Treatment, Storage and Disposal Practices in Kansas 1981 and 1982 Annual Report Summary" (Attachment 1) were distributed to the Committee.

Barbara Sabol reviewed "Questions from March 27, 1984 Meeting of Senate Energy and Natural Resources Committee" (Attachment 2). She said that her answer that Vulcan Materials Company was not paying any hazardous waste fees was not correct. They pay a generator monitoring fee and fees for the hazardous waste storage and treatment performed on-site. Responding to a question from Chairman Angell, Ms. Sabol stated that Vulcan is not paying any fees into the perpetual care fund.

Bill Bryson explained the situation at Vulcan. He said they have a system of five interceptor wells that pump contaminated groundwater from underneath the plantsite. The system is designed to keep the contamination from migrating. Mr. Bryson stated that the groundwater underneath the plant became contaminated from leaks, spills and disposal problems.

Ms. Sabol said the question concerning whether Vulcan should pay perpetual care fund fees has been referred to the legal department of Health and Environment. Chairman Angell questioned whether the definition of "hazardous waste" in Section 1(f), the definition of "radioactive waste" in Section 1(r) and Section 2(b) in H.B. 2725 puts Kansas in conflict with the terms of the Low-Level Radioactive Waste Compact and whether there is also a problem of what will be done until a site is developed under the Compact. Ms. Sabol said that there is a package of four bills: H.B. 2725 - prohibition on ground burial, H.B. 2726 - superfund, H.B. 2760 - low-level radioactive waste and H.B. 2740 - which amends the current hazardous waste statutes to bring them into compliance with the federal statutes. She advised that the bills amend the definition of hazardous waste so that it does not include low-level radioactive waste.

Chairman Angell asked why above-ground landfill mounds are preferable to ground burial. Dennis Murphey said that the mounds are more easily monitored and the leachate does not remain on the liner but is pumped off. Ms. Sabol pointed out that with ground burial disposal, the groundwater is already contaminated by the time a problem is diagnosed, but with mound disposal, there is a much better possibility that problems can be discovered before the groundwater is contaminated.

CONTINUATION SHEET

MINUTES OF THE Senate COMMITTEE ON Energy and Natural Resources,
room 123-S, Statehouse, at 8:00 a.m./~~xx~~ on Wednesday, March 28, 1984

Chairman Angell asked what H.B. 2725 allows the Secretary of Health and Environment to do that cannot be done under current statutes. Ms. Sabol replied that this bill would be a clear statement that other methods of disposal must be utilized. Further, she stated that she does not presently have authority to deny an application simply on the basis of ground burial. This bill shifts the burden of proof from the Secretary having to show why an application should be denied to the applicant having to show why an exception should be granted to allow ground burial.

Matt Selby read his written statement (Attachment 3) in support of H.B. 2725 and H.B. 2726. He stated that prohibiting land burial will provide added protection for groundwater. He feels the bills also provide incentive to find alternate sources of disposal. Mr. Selby said the superfund would provide funds to investigate potential problem areas before they become major, very expensive clean-up projects.

Marsha Marshall said her organization strongly supports both of the bills.

Bill Henry testified that H.B. 2725 allows for disposal by mound landfill, land treatment and underground injection and cautioned that these methods have the potential to be just as hazardous as ground burial. Mr. Henry stated that they would suggest that a section be added to H.B. 2726 to allow the Secretary to use funds for clean up of spills of hazardous materials.

Jim Aiken reviewed his written testimony (Attachment 4). He mentioned the possible conflict in the bills with the Low-Level Radioactive Waste Compact. He voiced concerns that mentioning injection wells in the statute might increase the use of such disposal methods. He recommends that along with banning ground burial of hazardous wastes, the state should provide or arrange for facilities to treat, process, recycle and dispose of hazardous wastes.

Bruce Bodecker testified in favor of H.B. 2725 and H.B. 2726. He said burial of hazardous wastes should be banned for many reasons: eventually there will be leakage, satisfactory monitoring is impossible, clean-up of hazardous waste sites is very expensive, clean-up after contamination is almost impossible, closures are extremely difficult to maintain and air and groundwater contamination cause present and future health problems. Mr. Bodecker stated that he does not agree with the prohibition on burial is not needed in the statute because the state administration changes and it is necessary to have the prohibition in statute to insure that the policy will continue.

The meeting was adjourned at 9:05 a.m. by the Chairman. The next meeting of the Committee will be at 8:00 a.m. on Thursday, March 29, 1984.

HAZARDOUS WASTE GENERATION AND TREATMENT,
STORAGE, AND DISPOSAL PRACTICES IN KANSAS
1981 AND 1982 ANNUAL REPORT SUMMARY

PREPARED BY

STATE OF KANSAS
DEPARTMENT OF HEALTH AND ENVIRONMENT
BUREAU OF WASTE MANAGEMENT
BUILDING 321, FORBES FIELD
TOPEKA, KANSAS 66620
(913) 862-9360

October 1983

Atch. I

1981 AND 1982 ANNUAL REPORT SUMMARY

The Kansas Department of Health and Environment (KDHE) began regulation of the generation and treatment, storage, and disposal of hazardous waste in 1977. With the advent of federal regulation of hazardous waste in 1980, KDHE adopted the federal standards for management of hazardous waste. These standards require that all hazardous waste generators and treatment, storage, and disposal facilities (TSDF) submit an annual report which details the types, quantities, and management practices used during the previous calendar year.

The deadline for submittal of the first annual reports for calendar years 1981 and 1982 was March 1, 1983. The appendix contains an alphabetical listing of Kansas industries which submitted annual reports for these two years. The following is a summary of this information:

1. The following table summarizes the total number of Kansas generators and TSDF which reported that they managed regulated quantities of hazardous waste. In Kansas a regulated quantity is defined as the generation of more than 100kg (220 pounds) in a calendar month or accumulation of more than 1000kg (2,200 pounds) at any one time.

<u>Year</u>	<u>1981</u>	<u>1982</u>
Generators	130	147
TSDF	<u>47</u>	<u>50</u>
TOTAL	177	197

The total number of facilities handling regulated quantities of hazardous waste increased by 11 percent from 1981 to 1982.

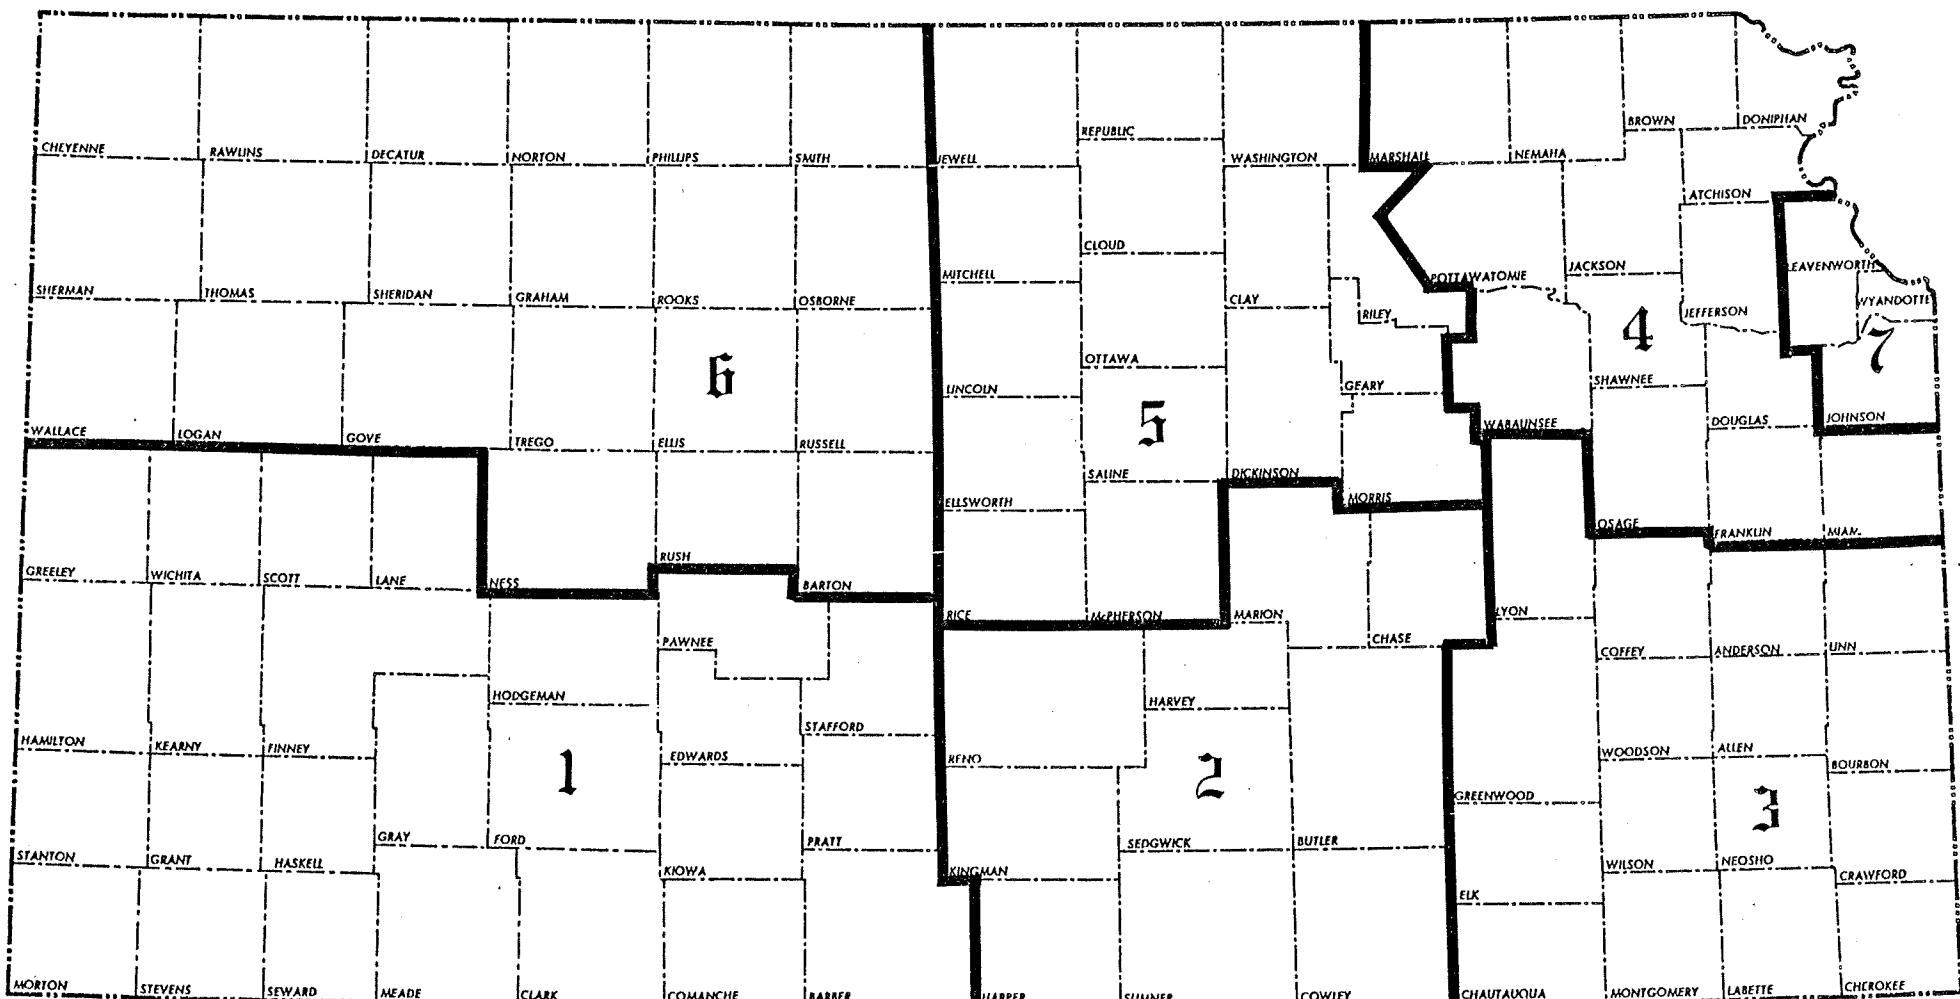

2. The geographical distribution of these regulated facilities in Kansas is summarized below.

Rank	District	1981			Percent Total
		Generators	TSDF	Total	
1.	Metropolitan Kansas City	45	16	61	34.5
2.	South Central	45	15	60	34.9
3.	South East	11	5	16	9.0
4.	North East	12	3	15	8.5
5.	North Central	10	4	14	7.9
6.	South West	5	2	7	4.0
7.	North West	2	2	4	2.2
	TOTAL	130	47	177	

Rank	District	1982			Percent Total
		Generators	TSDF	Total	
1.	South Central	59	15	74	37.6
2.	Metropolitan Kansas City	46	17	63	32.0
3.	South East	14	7	21	10.7
4.	North East	16	3	19	9.6
5.	North Central	6	4	10	5.1
6.	North West	4	2	6	3.0
7.	South West	2	2	4	2.0
	TOTAL	147	50	197	

The Metropolitan Kansas City and South Central Districts together contain approximately 70 percent of the total number of generators and TSDF in Kansas. A map of Kansas on the next page outlines these geographical districts.

KANSAS

GEOGRAPHICAL DISTRICTS

- | | | | |
|---|---------------|---|--------------------------|
| 1 | SOUTHWEST | 5 | NORTH CENTRAL |
| 2 | SOUTH CENTRAL | 6 | NORTHWEST |
| 3 | SOUTHEAST | 7 | METROPOLITAN KANSAS CITY |
| 4 | NORTHEAST | | |

3. A further breakdown of the distribution of regulated facilities by counties is as follows:

Southwest District

TOTAL	2	4	2	2

Metropolitan Kansas City District

<u>County</u>	Generators		TSDF	
	1981	1982	1981	1982
Johnson	23	21	5	5
Leavenworth	3	4	2	2
Wyandotte	<u>19</u>	<u>21</u>	<u>9</u>	<u>10</u>
TOTAL	45	46	16	17

During 1982, Kansas counties would rank as follows by total number of generators and TSDF:

<u>Rank</u>	<u>County</u>	<u>Total Generators and TSDF</u>	<u>Percent Kansas Total</u>
1.	Sedgwick	51	25.8
2.	Wyandotte	31	15.7
3.	Johnson	26	13.2

This indicates that over 50 percent of generators and TSDF are concentrated in just three of the 105 Kansas counties.

4. Kansas regulated industries managed the following quantities of hazardous waste during 1981 and 1982.

<u>Year</u>	<u>Total Quantity (Short Tons)</u>
1981	3,172,101.4
1982	3,041,968.8

The quantity of hazardous waste managed in Kansas decreased by approximately four percent from 1981 to 1982. This decrease is due to the following factors:

- a. the suspension of operations at National Industrial Environmental Services, Inc., the only commercial hazardous waste disposal facility in Kansas;

- b. the slow national economy which reduced industrial production and thus, quantities of hazardous waste;
 - c. increased knowledge of waste products by industry which resulted in some waste previously thought hazardous being reclassified as non-hazardous;
 - d. increased use of recycling to eliminate generation of hazardous waste; and
 - e. change in raw materials or processes which decreased or eliminated generation of hazardous waste.
5. The types of Kansas industries which manage the majority of hazardous waste are ranked as follows by standard industrial classification (SIC) code:
- | <u>Rank</u> | <u>Standard Industrial Classification</u> |
|-------------|---|
| 1. | 28 - Chemicals and Allied Products |
| 2. | 30 - Rubber and Miscellaneous Plastics Products |
| 3. | 29 - Petroleum Refining and Related Industries |
| 4. | 37 - Transportation Equipment |
6. The geographical distribution of the quantities of hazardous waste managed in Kansas parallels quite closely the distribution of total number of facilities previously discussed. The districts and counties would rank as follows for total quantity of hazardous waste managed in 1982:

<u>1982 Rank</u>	<u>District</u>
1	South Central
2	North East
3	Metropolitan Kansas City
4	South East
5	North Central
6	South West
7	North West

<u>1982 Rank</u>	<u>County</u>
1	Sedgwick
2	Shawnee
3	Wyandotte
4	Douglas
5	Johnson
6	Butler
7	Cowley

7. The following table presents a comparison of the methods used in Kansas during 1981 and 1982 to manage these quantities of hazardous wastes:

EPA Handling Code	Management Method	1981		1982	
		Rank	Total Quantity (Short Tons)	Rank	Total Quantity (Short Tons)
D80	Underground Injection	1	2,666,200	1	2,607,800
T31	Neutralization	2	228,588	2	227,553
T02	Surface Impoundment Treatment	3	177,131	3	154,110
D81	Landfill	4	51,403	13	571
-	Ship Off-Site	5	26,001	4	26,173
D84	Disposal Surface Impoundment	6	6,758	17	190
S04	Storage Surface Impoundment	7	5,425	6	6,059
S01	Storage Container	8	3,335	7	4,118
S02	Storage Tank	9	1,575	9	1,251
T77	Other Biological Treatment	10	1,170	5	8,622
D82	Land Treatment	11	1,073	8	1,519
T06	Liquid Injection Incinerator	12	1,014	12	609
D85	Other Disposal Methods	13	445	15	337
T57	Evaporation	14	406	18	179
T63	Solvent Recovery	15	361	20	78
T24	Chemical Reduction	16	322	11	703
S05	Other Storage Methods	17	316	-	-
S03	Storage Waste Pile	18	237	19	133
T66	Other Treatment Specific Components	19	203	16	199
T68	Aerobic Lagoon	20	80	21	60
T18	Other Thermal Treatment	21	50	22	30
T12	Pyrolysis	22	8	23	17
T07	Rotary Kiln Incinerator	-	-	10	1,235
T16	Cement Kiln	-	-	14	420

A review of this data reveals some very important facts about hazardous waste management in Kansas:

- a. During 1981 and 1982, 99 percent of the hazardous waste generated in Kansas was managed on-site. Thus, only one percent of Kansas hazardous waste is shipped off-site for treatment, storage, or disposal.
- b. During both 1981 and 1982, the three primary management methods ranked as follows.

Rank	Management Method	Percent of Total Hazardous Waste	
		1981	1982
1	On-site underground injection	84.1	85.7
2	On-Site neutralization	7.2	7.5
3	On-site surface impoundment treatment	<u>5.6</u>	<u>5.1</u>
	TOTAL	96.9	98.3

These three methods are used to manage no less than 96 percent of the hazardous waste generated in Kansas. Even though underground injection is the predominant method of waste management, this fact must be used in the context that all of this hazardous waste is generated by one facility Vulcan Materials Company, Wichita, Kansas.

- c. The management of hazardous waste remained relatively unchanged during 1981 and 1982, except for the following:
 - i) The landfilling of hazardous waste in Kansas decreased significantly from 1981 to 1982. This was due to the suspension of operations at the only commercial hazardous waste disposal facility in Kansas.

- ii) The disposal of hazardous waste in surface impoundments decreased significantly due to the closure of the majority of these facilities. The long-term monitoring and liability for operation of these facilities appears to be the primary factor for these closures.
8. The generation and management of hazardous waste in Kansas is concentrated in three Kansas industries. These industries rank as follows.

Rank	Industry/Location	Percent of Total Hazardous Waste	
		1981	1982
1	Vulcan Materials Company, Wichita	84.1	85.7
2	EI Dupont DeNemours and Company, Tecumseh	6.7	7.0
3	Cooperative Farm Chemical, Lawrence	<u>3.9</u>	<u>4.0</u>
	TOTAL	94.7	96.7

9. The types of hazardous waste managed in Kansas rank as follows:

Rank	EPA Waste Code	Contaminant Description	1981		1982	
			Quantity Short Tons	Percent	Quantity Short Tons	Percent
1	D007	Chromium	791,870	24.9	776,306	25.5
2	D001	Ignitable	686,138	21.6	665,242	21.8
3	U080	Dichloromethane	666,550	21.0	651,950	21.4
4	U044	Chloroform	666,550	21.0	651,950	21.4
5	D002	Corrosive	251,626	<u>7.9</u>	239,501	<u>7.8</u>
		TOTAL		96.4		97.9

These five waste types account for 96 plus percent of all hazardous waste generated in Kansas. The breakdown of waste types remained essentially the same between 1981 and 1982.

10. During 1982, 61 percent of the hazardous waste shipped off-site by Kansas industry was to Missouri TSDF; 17 percent to Oklahoma TSDF; four percent to Kansas TSDF; and the remaining 18 percent to TSDF located in Alabama, Arkansas, California, Colorado, Illinois, Indiana, Kentucky, Nebraska, Ohio, Pennsylvania, Tennessee, Texas, and Wisconsin. This distribution parallels that of 1981 with one exception. During 1981, Kansas TSDF received 21 percent of the hazardous waste shipped off-site by Kansas industry while in 1982 this percentage had decreased to four percent. This dramatic decrease was due to suspension of operations at the only commercial hazardous waste disposal facility in Kansas.
11. During 1981 Kansas was a net importer of approximately 37,000 tons of hazardous waste for disposal. In 1982 operation of the one commercial hazardous waste disposal facility was suspended. This resulted in Kansas becoming a net exporter of approximately 25,000 tons of hazardous waste. It is anticipated that Kansas will continue to be an exporter of hazardous waste as long as commercial hazardous waste disposal facilities are not available for use by Kansas industry.

This is the first time KDHE has had an accurate accounting of hazardous waste generation and management practices in Kansas. The collection and evaluation of this data is essential for long-term planning and operation of the Hazardous Waste Management Program. KDHE, therefore, will continue to require the submittal of annual reports from all generators and TSDF.

In conclusion, Kansas generates a much larger quantity of hazardous waste than previously estimated by the U.S. Environmental Protection Agency (EPA). The generation of hazardous waste is concentrated in three Kansas industries. Over 99 percent of all hazardous waste is managed on-site and deep well injection is the primary hazardous waste management method.

This information follows quite closely recent information released by EPA which indicates that nationally the quantity of hazardous waste is much larger than previously calculated. Also, nationally on-site management and deep well injection rank as the major management methods.

This summary in no way presents all of the data in the detail which is available. Anyone wishing to examine any or all of the annual report information should contact the Bureau of Waste Management, in the Topeka Office.

djl/4b

APPENDIX I

The following computer printout lists by name, location, waste type, quantity, and management method the 1981 and 1982 Annual Report information. This information is arranged alphabetically by name of facility.

For each different facility the following information is provided.

1. Facility Name

2. EPA Identification Number

3. Facility City

4. DS identifies the geographical district where the facility is located.

SW - South West

NC - North Central

SC - South Central

NW - North West

SE - South East

MT - Metropolitan Kansas City

NE - North East

5. HW No. identifies the EPA Waste Code for each specific waste which a facility managed. For further information 40 CFR Part 261 should be consulted.

6. 1981 TSD and 1982 TSD identifies for each specific waste listed the method used to manage the waste. The following is a summary of these codes.

Gen - Waste shipped off-site for treatment, storage, or disposal

S01 - On-site storage in containers

S02 - On-site storage in tanks

S03 - On-site storage in waste pile
S04 - On-site storage in surface impoundment
S05 - Other on-site storage methods
T02 - On-site treatment in surface impoundment
T06 - On-site liquid injection incinerator
T07 - On-site rotary kiln incinerator
T12 - On-site pyrolysis
T16 - Cement kiln
T18 - Other on-site thermal treatment
T24 - On-site chemical reduction
T31 - Neutralization
T57 - On-site evaporation
T63 - On-site solvent recovery
T66 - Other on-site treatment of specific components
T68 - On-site aerobic lagoon
T77 - Other on-site biological treatment
D80 - On-site underground injection
D81 - landfill
D82 - On-site land treatment
D84 - Disposal in surface impoundment
D85 - Other disposal methods

7. Amount identifies for each specific waste listed the total quantity in short tons (1 short ton = 2,000 pounds). If only a period appears in this column no waste was managed during that year.

| STATE OF KANSAS ANNUAL HAZARDOUS WASTE REPORT SUMMARY |

Questions from March 27, 1984 Meeting of Senate Energy
and Natural Resources Committee

Question

Is Vulcan Materials Company paying hazardous waste fees?

Answer

Yes. Vulcan has submitted a generator monitoring fee for those wastes shipped off-site for disposal. They also have paid fees for the hazardous waste storage and treatment performed on-site.

Question

Are the Vulcan injection wells subject to a regular inspection program?

Answer

Yes. The Kansas Department of Health and Environment reviews quarterly monitoring results for the five deep Arbuckle disposal wells. The injection wells are monitored for leaks by Vulcan in the following ways.

- (a) At least once a year, the 4" fiberglass tubing is raised, inspected and any defective joints replaced. The casing is inspected by down hole logs when the tubing is out of the hole.
- (b) Leak detection is monitored by a pressured oil column in the annulus which is atop the natural Arbuckle fluid level at 250' feet below surface.
- (c) Vulcan submits monthly reports showing pH and other analyses results of weekly grab samples of injected wastes water from each well. Organics are expressed in terms of Total Organics Carbon (TOC). Additional well monitoring information provided under the Underground Injection Control (UIC) Program includes:
 - 1) Annulus pressure (daily reading)
 - 2) Injection rate (daily reading)
 - 3) Gravity or vacuum reading (daily)
 - 4) Log of malfunctions and well related problems (submitted as a part of quarterly report)

Question

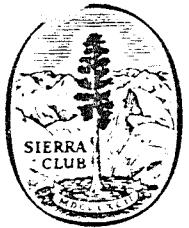

What percentage of the total amount of hazardous waste generated in Kansas does the quantity generated by Vulcan and disposed via injection wells constitute?

Atch. 2

Answer

In 1981 Vulcan generated 84.1% and in 1982 they generated 85.7 of the total quantity of hazardous waste generated in the State of Kansas if the quantity of contaminated groundwater being withdrawn for deep well disposal is included as hazardous waste generation.

Of the total quantity of wastes disposed via injection wells at Vulcan approximately 10% is contaminated groundwater, 10-30% is process waste which is RCRA hazardous waste, and the balance is process waste which is not RCRA hazardous waste.

SIERRA CLUB

Kansas Chapter

Testimony to
the Senate Energy and Natural Resources Committee
by
Matt Selby
March 28, 1984

The Sierra Club supports the ban of ground burial of hazardous waste because we believe it addresses one of the most important issues and concerns facing Kansans today - groundwater. Groundwater is a vital resource in Kansas. Over 80% of our total water usage is from the ground - this is higher than any other state in the nation. Our groundwater must be protected in every way possible so as to assure a high quality, affordable, and easily obtainable supply of water for future generations of people in this State. One way of protecting our supply of groundwater is by preventing contamination of the resource. Banning ground disposal of hazardous waste is a major step towards achieving that goal.

At the present time it is not technologically possible to bury hazardous waste in such a manner that will prevent eventual contamination of the surrounding water, land, and air. By prohibiting land burial, the State's water resources will be better protected and generators of hazardous waste will be provided with an incentive to find alternative methods of dealing with their hazardous waste. 80 - 90% of hazardous waste can be disposed of by alternative means such as

Hab. 3

recycling, incineration, and treatment. On the national lavel 3M Co., Dow, Exxon, and Getty have not only reduced production of hazardous waste, but have saved millions of dollars in some cases. Kansas companies that have turned to alternative methods include Cessna, Boeing, Kansas Plating Co., and Coleman. To encourage these companies to continue using alternative methods, to give other companies that are just waiting for Furley to reopen an incentive to began finding and using alternative means, and to protect the health, economy, and environment of the State, ground burial of hazardous waste must be prohibited.

The problem of groundwater contamination is not limited to hazardous waste dumpsites such as Furley, but to all sites where hazardous waste has been dumped in sufficient quantities to present a danger of groundwater contamination. These sites are numerous. For years small generators have been exempt from all regulations controlling the disposal of hazardous waste. The 2000 - 3000, or more, generators who produce less than 100 kilograms (or 220 pounds) per month, are free to dispose of their waste in any manner including pouring it down the drain, dumping it in a ditch, or, most likely, hauling it to the local landfill. The amount of hazardous waste that has accumulated in some of this state's local and county landfills may be enormous, not to mention very dangerous. The sites with the greatest potential of causing groundwater contamination have been identified and need to be investigated to determine the extent of the danger. HB 2726 recognizes this need and attempts to create a Superfund to be used for the purpose of investigating the sites most likely to pose a threat to the groundwater in the area. It is essential that these sites be checked to see if there is a

problem present, and to catch and address the problem areas before they become major clean-up sites.

Clean-up of contaminated areas is extremely expensive, regularly running into the millions of dollars. While ground burial is the cheapest method of disposal in the short-run, it is by far the most expensive in the long run. Once a site becomes contaminated there is no cheap method. Right now we have a choice of whether to spend money to implement alternative methods of disposal or waiting until later and spending many times that amount to clean up today's mistakes. In the future we will not have a choice.

Hazardous wastes presents many problems. HB 2725 and 2726 deal with these problems.

- 1) 2726 provides funds to investigate potential problem areas before they become major clean-up sites.
- 2) They recognize that while most hazardous waste can be reused or disposed of by some alternative method, a small percentage will have to be stored in some manner. 2725 does not abolish storage of hazardous waste, it simply prohibits the most dangerous of the methods. Other types of storage such as mound burial, above ground storage, and underground injection are not prohibited. The secretary may also grant exceptions to the prohibition on land burial if the person seeking the exception meets the required standards.
- 3) 2725 prohibits the dumping of individually small but cumulative large and extremely dangerous amounts of hazardous waste in our local landfills, roadside ditches, and sewer systems. At the same, the bill recognizes the problems small generators might have with

immediate compliance of a complete ban by phasing out the exemption on small generators over a four year period.

4) Most importantly, the bill bans the ground burial of hazardous waste. This ban is vital to the protection of our groundwater resource. Permitting ground burial is equivalent to granting a license to contaminate groundwater.

For the reasons set forth, the Sierra Club supports HB 2725 and 2726.

A. Objective and Rationale

The Kansas Engineering Society (KES) has been concerned about the control and proper disposition of hazardous waste for several years. KES has taken an active role in making recommendations to the Legislature and to the Governor concerning hazardous waste, and has been the driving force in developing the position statement on hazardous waste by the National Society of Professional Engineers (NSPE).

Both the KES and the NSPE positions provide technically sound arguments regarding the proper treatment (detoxification) and disposal of hazardous wastes so that the population and the environment are not adversely affected. There are existing and proven engineering processes which can be applied to detoxify most hazardous wastes.

The KES evaluation of the present situation in Kansas is as follows:

1. Kansas does not have, and has not had for more than two years, an in-state facility for treatment or disposal of the broad spectrum of wastes generated in the State.

2. KES is not optimistic that the present facility or one like it will ever be operated in Kansas because of unfavorable public attitudes regarding this mode of hazardous waste disposal.

3. The lack of comprehensive hazardous waste treatment and disposal facility is neither environmentally sound nor conducive to the establishment of an increased industrial business base in the State.

KES, therefore, recommends that the Kansas Legislature take a fresh approach to solving the hazardous waste problem as rapidly as possible by establishing a centralized waste treatment, processing and disposal site. The planning and construction of such a site will require at least three to four years, so the Legislature is urged to move with dispatch to provide these urgently needed facilities.

The provision for such a centralized facility will be a great service to both the small quantity generator and to those generators who produce larger waste quantities but who elect not to provide approved and permitted on-site treatment.

B. Position Statement

The State of Kansas should own and operate or cause to be operated a comprehensive treatment facility for hazardous wastes. Such a facility will receive and store properly segregated hazardous waste from generators, provide appropriate treatment to render the wastes

non-hazardous, and dispose the residues in an environmentally sound manner.

The facility operator shall determine the amenability to treatment by the facility of specific wastes.

Generators of wastes which are non-treatable or for which the appropriate processing is not available within the facility must apply for and receive approval from the oversight agency for long-term storage and/or disposal of the waste while still in its hazardous form.

C. Implementation

The State of Kansas should create a separate authority operating in tandem with the Kansas Department of Health & Environment to implement this concept. The authority should be fully operational, funded from charges to industry for waste processing. The State of Kansas should purchase property, construct, own and cause the facility to be operated as a separate treatment and disposal utility. Legislation should be developed around this concept and fully funded, initially from the State General Revenues, with repayment by the using industries. Care should be taken to allow fiscal flexibility so as to insure and maintain the utilization of current technology.

Hazardous Waste

The National Society of Professional Engineers and the Kansas Engineering Society recommend that state and federal governments create economic incentives for private industry to provide treatment for hazardous wastes and to recover resources from waste materials. Comprehensive regional treatment and recycling facilities should be included under the options eligible for such incentives. Consideration should be given to mechanisms which expedite siting of these facilities.

The Society also recommends the following policies be legislated by Congress and implemented by the U.S. Environmental Protection Agency.

1. Increase emphasis on resource recovery, recycling, and detoxification of hazardous waste materials. Disallow land burial for materials that present a significant risk to the environment, and for which economically achievable, environmentally sound alternatives exist. Encourage the transfer of viable technology for recycling and detoxification of waste.

2. Simplify, streamline, and codify the complex regulations which have been issued to date, to make compliance requirements more understandable to those who generate, treat, or store hazardous wastes.

3. Codify procedures required for delisting petitions for treated wastes, and accelerate review and approval procedures by EPA. Specific guidelines for delisting petitions should be published, and properly prepared and submitted petitions should be acted upon within three months. Encourage delisting action by the states, where appropriate.

4. Restrict exemptions for small quantity generators of wastes which pose a significant hazard to human health and the environment.

5. The degree of risk inherent in any waste should be considered in all regulations concerning its disposal. Further controls on hazardous wastes should be limited to those wastes which pose a significant risk to the environment or to public health, and programs to encourage alternative methods of disposal should be emphasized to focus on those with the highest risk.
