Approved: February 28, 2001

MINUTES OF THE HOUSE HIGHER EDUCATION.

The meeting was called to order by Chairperson Lisa Benlon at 3:30 p.m. on January 29, 2001 in Room 231-N of the Capitol.

All members were present except: Annie Kuether (E)

Valdenia Winn (E)

Committee staff present:

Carol Rampey, Kansas Legislative Research Department

Paul West, Kansas Legislative Research Department Stuart Little, Kansas Legislative Research Department Avis Swartzman, Office of the Revisor of Statutes

Dee Woodson, Committee Secretary

Conferees appearing before the Committee:

John Lind, President, Kansas Association of Technical Schools and Colleges

Richard McWhorter, Director of Kaw Area Technical School

Eddie Estes, President & CEO Western Kansas Manufacturers Associaiton

Arty Strahela, Plant Manager, Goodyear Tire & Rubber

Jack Porteous, GO Topeka

Jim Schwarzerberger, Vice President, Wichita Area Chamber of Commerce

Jon Miles, Vice President of Governmental & Technical Services, Kansas Electrical

Cooperatives, Inc.

Steve Hall, Boelte-Hall Litho

Tom Whitaker, Executive Director, Kansas Motor Carrriers Association

Roger Kraft, Vektec, Inc.

James Oldebeken, President, Printing Industries Association of the Heartland

Jim Edwards, Kansas Chamber of Commerce & Industry (written only)

Others attending:

See attached sheet.

Chairperson Benlon opened the meeting with a welcome greeting to all in attendance, and announced that there would be numerous conferees testifying to the Committee on technical and vocational education schools. She introduced the first conferee, John Lind, President, of the Kansas Association of Technical Schools and Colleges, and the Director of the Kansas City Area Technical School. Mr. Lind also serves as a Board member of the SDA III Workforce Investment Board. Mr. Lind testified in support of the Regents' budget request for the technical institutions, and he gave the latest statistics regarding job openings, average salary of the Kansas worker, percentage of jobs that require more than a high school diploma, and the number of students enrolled in the technical schools. (Attachment 1)

Mr. Lind went over the operational costs, equipment costs and facility needs for FY 2003. He said the cost of these needs have increased and would continue to increase in the future. He asked the Committee to consider taking the following action: (1) to increase funding over the Governor's recommendation for post-secondary aid and for capital improvements; and (2) to support legislation to implement the Governor's Task Force recommendations on Workforce Development. He said the panel of speakers that the Committee would hear at this meeting would share their information and remarks on Workforce Development and the importance of their efforts for continued economic development in Kansas.

The second conferee, Richard McWhorter, Director of the KAW Area Technical School, spoke in support of the Workforce Development programs through the technical schools and colleges. He said that the Workforce Development Force made their report to the Governor in December, and their findings indicated there had been very little progress in addressing the problems which workforce development identified in the report three years ago. He testified that lack of resources was a major problem, and that

MINUTES OF THE HOUSE HIGHER EDUCATION COMMITTEE, Room 231-N of the Capitol at 3:30 p.m. on January 29, 2001.

the current funding formulas discourage community colleges and technical schools from developing programs to meet business training needs. He said there was also a great need for capital improvements as much of the equipment was outdated and overused. He explained further about the shortages for equipment upgrades, increased teacher salaries, the speed at which computer technology needs upgraded, necessary facility improvements, equipment needs for all of their industrial programs, and the fact that they have sixteen institutions that divide any appropriations they are given. Mr. McWhorter recommended establishing a commission with the responsibility to study the technical education delivery system in Kansas and make recommendations to the next legislative session. Mr. McWhorter explained that the two primary sources of revenue for the technical schools are the post-secondary aid appropriation and the vocational capital outlay fund. He strongly urged the Committee to support the Board of Regents request for the post-secondary aid appropriation for technical schools and colleges in Kansas. (Attachment 2)

The third conferee, Eddie Estes, President and CEO of Western Kansas Manufacturers Association, testified in favor of increased funding for the vocational colleges and area vocational schools. He told the Committee that his organization sponsors the 3i SHOW in April each year, and it is comprised of 150 manufacturers, service industry and associate members. He said the event brings together 600 companies from 33 states and several foreign countries to display the latest in agriculture technology and service. He explained that at this occasion these companies have the opportunity to discuss current business conditions, and the most critical issues that they all face nation-wide is the lack of properly trained employees. Mr. Estes said he serves on the National Work Force Board and they have made this skilled worker shortage a banner issue. He gave an example of the need for the technical schools by stating that the Northwest Kansas Technical School had a waiting list of 600 students wanting to enroll in three programs, i.e. Communications Tech, Communication Network Tech, and Electronic Tech.

Mr. Estes submitted to the Committee that around 1973 the Governor established a fund for capital outlay of \$2 million for area vocational and technical schools. He said that was 20 years ago, and they could not keep up with technology changes with no more commitment than that. He pointed out that students who are trained in Kansas Technical schools/colleges remain in the state and become tax payers. He asked the Committee for their support in better funding for these schools. (Attachment 3)

The fourth conferee to testify before the Committee was Arty Strahela, Topeka Plant Manager for Goodyear, and he spoke to the Committee from an industry point of view on the critical shortage of technically skilled workers. He stated this shortage hurts economic growth and development in our communities. Mr. Strahela said that as technology continues to evolve at an incredible pace, we need to evolve our workforce. Mr. Strahela explained the graph in his written testimony that depicts three of Goodyear's plants and the expected eligible retirements they foresee, which he feels will increase the need/demand for trained and skilled employees. He told the Committee that Goodyear strongly supports a cooperative training program between the state, city, and county and local employers. He gave an example of Lawton, Oklahoma; and then explained the funding that the State of Oklahoma has invested in order to retain existing business and attract new business to the state. He urged the Committee to seriously review the lack of skilled workers in our community, and consider the impact this lack will have on our current business and the opportunities to attract new businesses. (Attachment 4)

Jack Porteous, GO Topeka, was the fifth conferee to testify about the increased labor needs for technically trained employees. He stated that a recent study done by the Hudson Institute in Indianapolis disclosed that 82% of the jobs in the year 2020 would not require a college education. He said that we are in a technological revolution that is having a major impact on our labor force and we must prepare for tomorrow's labor needs. He added the key to future economic growth was the ability to train tomorrow's high skilled workforce. He shared with the Committee some facts on wage and salary employment (pace of work) for the Topeka and Shawnee County area, and commented that Topeka's anemic growth rate could partly be attributed to our lack of skills necessary to fill the increased demand for skilled labor. He asked the Committee to act now and give Kansans the ability to train for the new jobs of tomorrow. (Attachment 5)

The sixth conferee to speak was Jim Schwarzenberger, Vice President, Workforce Development for the Wichita Area Chamber of Commerce, and Chairman of the General Advisory Board for the Wichita Area

MINUTES OF THE HOUSE HIGHER EDUCATION COMMITTEE, Room 231-N of the Capitol at 3:30 p.m. on January 29, 2001.

Technical College. He testified that it was part of his responsibilities to work in Workforce Development with trainers, educators, and also meet with economic development prospects who come in from outside our community as well as within our community seeking to expand their operations.

Mr. Schwarzenberger testified he wanted to make three points: (1) The number one concern for site selectors and CEO's all across the country has been the availability and sustainability of a qualified workforce; (2) Kansas' economic development competitors are showcasing to prospects their technical training schools and colleges, and our state needs to take a look at national "best practices" and to consider the economic development consequences of not investing more in technical training; (3) He said we need to attract students to technical professions/trades. He stated he felt that Kansas stands to lose an increasing share of the high skill, high wage jobs to its competing states across the country. He concluded by saying the development and continued support of an outstanding technical training system is of great importance. (Attachment 6)

The seventh conferee was Jon K. Miles, Vice President of Governmental and Technical Services for Kansas Electric Cooperatives, Inc. (KEC). He spoke on behalf of Manhattan Area Technical College in support of adequate and continued funding. He related to the Committee the relationship between the rural cooperatives of Kansas and the Manhattan Area Vocational Technical College since 1970, when they first offered students the opportunity to receive classroom instruction and field training to become apprentice linemen in the electric utility industry. He said the current classroom size is a maximum of 18 students, and the total number of applications received by April 7, 2000 for the January 2001 class was 75. He further stated that for the employer, the school has provided the student the basic electrical and mathematical knowledge necessary to perform such technical duties as line construction, power substation and distribution transformer connections, etc. He testified that for the employee, the one-year school and on-the-job training provides the student an opportunity to decide whether the job is a good fit within one year at very little cost to the student.

Mr. Miles said that he was a graduate of the Manhattan Area Vo-Tech School, and to his knowledge every class since 1973 has had a waiting list for students. He added that the school has an excellent student placement record. (Attachment 7)

Steve Hall, President of Boelte-Hall Litho, Inc., was the eighth conferee to testify in support of better funding for vocational and technical schools. He shared with the Committee the problems his company has in finding well trained and qualified employees. He said that the printing industry is largely composed of small companies, and 80% of printing companies have 20 or fewer companies. He stated that the printing industry is not known as a large industry, and yet they employ almost 15,000 in Kansas. He concluded by saying it was his opinion that technical education in Kansas did not come close to the education quality Kansas offers in high schools and colleges, and industry in the state needed the legislators' help in addressing this situation. (Attachment 8)

Tom Whitaker, Executive Director of the Kansas Motor Carriers Association (KMCA), was the ninth conferee and appeared before the Committee representing 1,450 member firms and the Kansas trucking industry. He testified that KMCA had a long history of supporting the truck driver training at the Southwest Kansas Technical School in Liberal, the Wichita Area Technical School, and Fort Scott Community College. He said that KMCA initiated and passed legislation in 1989 to dedicate \$2.00 from every commercial drivers license fee to the truck driver training fund.

Mr. Whitaker shared with the Committee that recent studies have estimated the need for 80,000 new truck drivers annually over the next decade. He said that without a new supply of qualified drivers, the trucking industry would have difficulty in meeting the freight demands in this state and the U.S. He added that the trucking industry currently transports nearly 82% of all of the nation's freight. In summary Mr. Whitaker stated that continued funding for this valuable asset was imperative for continued growth of the Kansas economy in this global business climate. (Attachment 9)

The tenth conferee was Roger Kraft, President of Vektec, Inc., Emporia, Kansas, told the Committee his company manufactures hydraulic equipment and machine parts that most of which are shipped to locations outside the state. He said they employed 115 employees and have been developing their

MINUTES OF THE HOUSE HIGHER EDUCATION COMMITTEE, Room 231-N of the Capitol at 3:30 p.m. on January 29, 2001.

operation in Emporia since 1975. Mr. Kraft testified that he was a member of the newly established Advisory Board for the Flint Hills Technical College in Emporia, and was appearing before the Committee on behalf of the business and industry community in Emporia that supports and relies heavily on the Technical College to provide well trained graduates that could be upwardly mobile in their businesses.

Mr. Kraft said Flint Hills had established an all time enrollment record this year, beginning in school year 2000-2001, and is right at 400 students which is better than a 10% increase year over year. Mr. Kraft told the Committee that for the current year, Flint Hills has only received three quarters of one percent increase in funding from the Kansas Board of Regents. He stated that staff salaries alone would exceed that minimal increase, yet we have had over a 10% increase in the demands of that institution. He said that as an outsider looking in at the situation, it indicated to him that the Kansas Board of Regents essentially would be reducing the scope of that school. Mr. Kraft explained that they had a large increase in students, but they did not receive enough of an increase to support the existing situation let alone the increase in requirements at Flint Hills. He added that this is a real problem that must be dealt with if we are going to continue to grow industry in the State of Kansas. He said that the Committee had heard comments about the inability to bring industry into Kansas because those prospective companies have seen that there is a lack of good technically trained employees. Mr. Kraft testified that he felt that the State of Kansas was not treating the non-college bound student fair, whereas 2/3 to 3/4 of the high school graduates do not go to a four year institution, and they have not been given a good picture of technical and vocational training schools while they were in high school. He concluded by stating that Kansas needed to get priorities straight, and put the money where we need it in order to bring more industries into the state and take care of the existing industries.

James Oldebeken, President of Printing Industries Association of the Heartland, testified before the Committee as the eleventh conferee that his industry was Kansas' third largest manufacturing employer with nearly 15,000 employees (excluding Hallmark Cards) at 548 firms and sales of just over \$2 billion. He told the Committee that the printing companies owners have actively worked with the Kansas City Area Technical School and their administrators to develop the KCKATS Graphic Communications program into a "world-class" technical program. He said the program becomes the only second printing program in the state to attain PrintED accreditation.

Mr. Oldebeken stated that due to the printing industries' significant problems with finding trained workers, that the lawmakers would be hearing from them more often on the issue. He pointed out that the neighboring states such as Oklahoma has a dramatically stronger technical training program. He also said that the system for drawing students into the technical programs needed to be improved, and he feels that Kansas does not have a handle on the nature and extent of the workforce needs of their industry. Mr. Oldebeken concluded with the point that the relationship between state government, education and industry could do a better job of fixing the problems with communications, cooperation and partnership. (Attachment 10)

Written testimony only: Jim Edwards, Chamber of Commerce and Industry (Attachment 11)

The Chair opened the floor for questions and comments from the Committee members. She said that a question came up during a previous discussion with a fellow member of the Committee about whether the schools are teaching technology that can be used in today's business world, and we are not still hung up with teaching old technology like keypunch. She noted that heads nodded affirmatively in answer from those sitting in the audience that this was being done. The Chair also asked if the reason the schools had large waiting lists was due to lack of teachers, lack of technical equipment, and other capital improvements to teach. She asked if that was really the problem of not having the facilities and we don't have the teachers to teach? She continued to question if this was the reason we were not expanding the classes, or is it the inability to teach 40 students in one classroom in a technical field.

Ken Clouse, President of the Northeast Kansas Technical College at Atchison, responded in terms of the technology, he said he would tell the Committee that absolutely it was a high priority with all of them to be as current as they possibly could be. He stated that the men who testified at this meeting probably

MINUTES OF THE HOUSE HIGHER EDUCATION COMMITTEE, Room 231-N of the Capitol at 3:30 p.m. on January 29, 2001.

serve on advisory committees for all the schools, so they feel like they have close partnerships constantly to insure the viability of the programs and the technology level was relevant to the job which a worker will go to. He responded to the second part of the Chair's question and said the funding for equipment that Dr. Estes mentioned in 1970 there was \$2 million for capital money which could go for equipment or facilities. Today, he said he was talking about \$2.7 million some 30 years later, and everyone knows that inflation and cost of operating has increased drastically since 1973. Mr. Clouse went on to say the post-secondary aid money that they received last year that they were able to deliver services for more than \$250,000 more than what we were funded for. He felt they could deliver a lot more services today if they knew the funding was going to be there to hire the faculty, pay for supplies that it takes to operate a welding class for an example. He said that operational costs continue to go up, and if they don't have the funding coming in to address those needs, they are going to start to look at ways to cut back in order to meet costs. He concluded that they are looking at a lack of capital to operate with, lack of facilities, and a lack of equipment.

Chairperson Benlon asked if the students who stay on the waiting list year after year, do they finally give up and go to other non-skilled jobs? She inquired if they lose these students because of the waiting list who could possibly be good technical individuals. Dwight Dunn, President of the Manhattan Technical College, explained that the numbers on the waiting list are rolled over as we continue to contact the students on the list who are interested. He said they take the students on a first apply, first enroll basis, and each of those students pay a \$25 non-refundable application fee. He went on to explain what happens to the students who apply and are on the list, but do not wait for an opening, and the other choices they have for this type of education in electric power. Mr. Dunn also said that all the programs in Manhattan are underfunded, and they will probably have to start cutting the evening classes. He told the Committee that private industry and businesses might have to contribute more in order to maintain the programs if the state continues to under-fund these types of educational classes.

General questions and discussion followed regarding: what drives the idea of where the programs are located at which area schools, not having sufficient numbers of people in the program such as the printing industry; the lack of communication or mis-communication within the high school counselors or even selling it to parents to attend a vocational or technical school instead of a four year university, need funding to overcome the perception problem that technical schools have, possibility of raising the tuition in order to help schools fund themselves, and the actual necessity for admission.

The Chair gave some closing remarks regarding the Appropriations Committee's responsibility to allocate the funding, and that the Higher Education Committee would be willing to assist in this endeavor in any way that they can to help promote increased funding for the vocational and technical schools.

Steve Kearney said there were two things he wanted the Committee to work on, and they were: (1) to talk to their peers on the Appropriations Committee, and encourage them for the short term this next year to endorse the Board of Regents' recommendations to the Governor so these schools can survive another year and be able to serve the citizens of Kansas and the work force concern; (2) the technical schools and colleges would encourage a piece of legislation that would form a commission that would study singularly the needs of technical education in Kansas, and address the many issues that are being grappled with currently by the Board of Regents as they try and get their arms around all of these institutions that they suddenly inherited a couple of years ago.

Chairperson Benlon recommended that Mr. Kearney and the Revisor get together and draft the proposed legislation to be introduced in the Committee.

The minutes of the Higher Education Committee for January 10 were presented for additions and corrections. Representative Phelps made a motion to approve the minutes as written, seconded by Representative Gordon, and the motion carried.

Chairperson Benlon adjourned the meeting at 5:15 p.m. The next meeting of the House Higher Education Committee will be Wednesday, January 31, Room 231-N at the Capitol.

MEMORANDUM

TO:

Chairman Lisa Benlon and House Higher Education Committee Members

FROM:

John Lind, President

Kansas Association of Technical Schools and Colleges

DATE:

January 29, 2001

TOPIC:

Workforce Development in Kansas

Thank you for scheduling this hearing to receive testimony from our association leadership as well as leadership from industry who serve as Advisory Committee Members to our colleges and schools.

I have the pleasure of serving as the Director of the Kansas City Area Technical School and I also serve as a Board Member of the SDA III Workforce Investment Board. At our board meeting in Kansas City last week, Secretary of the Kansas Department of Human Resources Rick Beyer shared the following statistics:

- There are 100,000 job openings in Kansas and there are only 50,000 unemployed Kansans. The average salary of the Kansas worker is \$30,000. If we could fill these jobs, it would bring three billion in personal income and the state would realize \$100 million in income tax revenues. For each 1,000 jobs filled, the state will receive \$8.5 million in income tax revenue. The average employee produces \$50,000. in net income for an employer.
- Eighty percent of these jobs require more than a high school diploma, but less than a bachelors degree. Preparing Kansans for these high demand technical jobs is the focus of our institutions and the center of our mission statement. Our schools and colleges transform our students into responsible tax paying citizens in one year or less.
- Our association includes five community colleges, five technical colleges and six technical schools. Last year the 11 technical schools and colleges served 27,512 students enrolled in over 100 programs statewide.

We come to you today to urge your support and consideration of the Regents budget request for our institutions.

House Higher Education 1-29-01 Attachment 1 Over the past three years, our schools have seen costs of operations increase at the rate of five percent annually. In FY 2000, our post secondary aid was cut .0067 in FY 2001 we received a .0076 increase or \$200,000. for our 16 institutions. Our net increase in state post secondary aid the past two years has been a total of \$22,834. for 16 schools and colleges.

This years Regent budget request called for a five million dollar increase in post secondary aid and a 3.3 million dollar increase in capital outlay funds. The Governor recommended a total of .6 million or 2.2 percent. The Governor's recommendation for capital outlay of \$2.7 million reflects no increase over 2001.

Not investing in Workforce Development is a missed opportunity! Our schools and colleges are the premier provider of a technically skilled workforce. We ask you to consider taking the following action:

*To increase funding over the Governor's recommendation for post secondary aid and for capital improvements

*To support legislation to implement the Governor's Task Force recommendations on Workforce Development.

A quick look at operational costs, equipment costs and facility needs for FY 2003 brings us to the reality that our equipment will become more obsolete and our buildings in great disrepair. At the same time, our payrolls increase at a rate of about 3.5 percent each year. The past three years we have operated deficit budgets. I have spoken to some directors who predict waiting lists for program enrollment will be common place. The expected increases in payroll and energy costs will force hard choices resulting in program closure and discontinuing evening division programs as well as custom programs for business and industry.

I am pleased to introduce a panel of speakers who will share their remarks on Workforce Development and the importance of our efforts for continued economic development in Kansas:

Richard McWhorter, Director Kaw Area Technical School

Eddie Estes, President & CEO Western Kansas Manufacturers

Association

Arty Strahela, Plant manager Goodyear

Jack Porteous GO Topeka

Jim Schwarzenberger, Vice-President Wichita Area Chamber of

Commerce

Jon Miles KEC

Steve Hall Boelte-Hall Litho

James Oldbeken, President Printing Industries Association of

the Heartland

Thank you for taking time to listen to our concerns. We are grateful for the time and leadership you so generously provide our state.

COMMITTEE ON HIGHER EDUCATION PRESENTATION ON WORKFORCE DEVELOPMENT Richard McWhorter, KAW Area Technical School January 29, 2001

I am here today to seek your assistance in securing adequate funding for technical education in Kansas and for Kaw Area Technical School in particular.

In 1997, Kansas Inc. issued a report, "A Kansas Vision for the 21st Century". The report stated that, "Access to a well trained workforce will be absolutely essential to the competitiveness of Kansas firms". It goes on to report a shortage of skilled workers in nearly all fields. It points out that these imbalances "weaken the state's economy and capacity to grow".

Last month the Workforce Development Task Force made it's report to the Governor on Kansas Jobs for the 21st Century. Sadly, we find that Kansas has made little progress in addressing the problems with workforce development identified in the report three years ago. The current report finds that "Kansas has depleted the available supply (of skilled employees) and now must enter crisis management to prepare our students for the future—that is, if Kansas wants to maintain economic prosperity".

The technical schools and colleges are the State's frontline resource for addressing the problems identified in these reports. Unfortunately, they are woefully lacking in resources to attack the problem. The report finds that, "the current funding formulas discourage community colleges and technical schools from developing programs to meet business-training needs". The report also points out the need for capital improvements when it states, "It is difficult for post-secondary institutions to be fully utilized as workforce-training centers when much of their equipment is outdated and overused".

The two primary sources of revenue for the technical schools are the post-secondary aid appropriation and the vocational capital outlay fund. At Kaw forty-eight percent of our operating revenue comes from the post-secondary aid formula. The increase in the post secondary aid appropriation from FY 00 to FY 01 was .76%. Our salary increases, based on negotiated agreement, were 4%. This means that if we aggressively pursue additional training programs for business and industry, the state will not participate financially in the operation of those programs. Last year the post-secondary aid fund experienced a \$221,109 funding shortfall in paying the technical schools for the services that they delivered. This means that we started the current year in the hole and received less than a one percent increase to fund programs for the current school year. If this continues, the technical schools will face a funding crisis. The only way that we were able to respond to this situation at Kaw was to reduce our workforce.

House Higher Education 1-29-01 Attachment 2 For next year the Governor has recommended an increase of approximately 3% in post secondary aid, which amounts to approximately \$32,000 per school. We anticipate that our salaries alone will increase over \$90,000 next year.

Our ability to upgrade equipment is an equally difficult problem for the technical schools to address. The State appropriation for vocational capital outlay aid for the current year is \$2,700,000. This figure represents an 8% increase over the FY 00 appropriation, but only amounts to a \$200,000 increase. This appropriation must meet the equipment needs of all sixteen institutions in the State of Kansas. Kaw's share of that appropriation this year amounts to \$214,838. We need to spend almost \$200,000 a year just to keep our computer equipment up to date at Kaw. We cannot begin to address the equipment needs for all of our industrial programs or facility improvements. If the technical schools are going to play an important role in workforce development in Kansas these problems must be addressed.

In the short term, I would request that the legislature fund the Regents recommendation for Technical Schools and Colleges. The Board of Regents has requested that the post-secondary aid appropriation for technical schools and colleges in Kansas for FY 2002 be increased to \$31,465, 968. They also requested that the appropriation for capital outlay be increased to \$6,004,625. The LEPC Committee, in their final report, noted that they support the State Board of Regents' recommendation for FY 2002. I am asking for your support in securing this level of appropriations for FY2002.

In the long term I would request that the legislature establish a commission with the responsibility to study the technical education delivery system in Kansas and make recommendations to the next legislative session. The report on "Kansas Jobs for the 21st Century report would provide an excellent starting point for this study.

If the Topeka/Shawnee County area, and the state as a whole, is to prosper economically, we must address the challenge of workforce development. Employers in our area have identified skilled labor shortage issue as a primary problem. We are in competition with other communities and states to attract new industry and to retain the companies that we have. If the legislature approves the Board of Regents request for funding for the technical schools and colleges it would amount to a total appropriation of \$37 million. Our competitor to the south, Oklahoma, appropriated about \$80 million in direct support of their technical schools this year.

I would appreciate your support of this issue during the coming legislative session.

Presentation to the House Higher Education Committee

January 29th, 2001

Prepared by Eddie D. Estes, Ph.D. CEO

Western Kansas Manufacturers Association, Dodge City

Chairman Benlon and Committee members, it is my pleasure to have this opportunity to visit with you regarding some of the issues that face our vocational colleges and area vocational schools. First, the Western Kansas Manufacturers Assocation, sponsor of the 3i SHOW, is comprised of 150 manufacturers, service industry and associate members. Each year, in April, the 3i Show brings together 600 companies from 33 states and several foreign countries displaying the latest in ag technology and ag service. This is an opportunity for these companies to not only display their goods and services, but to also discuss current business conditions. One of the most critical issues that they all face is the lack of properly trained employees. Whether it is western Kansas or nation wide this is a critical issue. During the year, our association provides several workshops on subjects such as marketing, and supervision. Again, the discussion revolves around the shortage of skilled employees. The National Work Force Board, on which I serve, has made this skilled worker shortage a banner issue. The Kansas WorkForce Investment Partnership (KWIP), appointed by Governor Graves also discusses the problems of a lack of skilled labor. Some reports have indicated that they may be as many as 100,000 jobs in Kansas that are unfilled due to our current labor pool.

How do we face this problem? One method might be a review of funding for the institutions that provide this skilled training. Suggestions have been made through the years as a result of several studies authorized by the Kansas legislature. One major flaw has been that though recommendations regarding funding were made, they were not tied to governance issues. It was always my view that you can not study funding without governance or governance without funding. Currently, it appears to me that we now have the governance issues at hand, but again funding is not being addressed.

Over the past two years, funding recommendations from the Governor's office would only reflect about a 3% increase for technical colleges and area schools. Have you looked at your utility bills lately? Compared to other state funded educational systems, this is a bit short. The question is Why?

In one institution, the Northwest Kansas Technical School, there is a waiting list of 600 students that would like to enroll in three programs. The programs are Communications Tech, Communication Network Tech, and Electronics Tech. As the speaker at the Joint Advisory Council of the school recently, I asked several of the advisory committee members what their most critical problem was, and again it was the skilled help issue. On one hand we have 600 students on a waiting list, and on the other we have employers needing to hire those employees. Something isn't right here.

After the meeting, I meant with Larry Keirns, director of the school and asked a simple question, What would it take to solve this problem? Keirns indicated that in capital outlay alone the cost would be about 2,500,000 dollars. The entire capital outlay fund for these schools last year was only 2.7 million dollars and that was based on a 2 for 1 match. For every two dollars the state provided, the schools needed to come up with one dollar. Again, a major problem.

During the early 70's, around 1973 the Governor established a fund for capital outlay of 2 million dollars for area vocational schools and area vocational technical schools. That was 20

House Higher Education 1-29-01 Attachment 3 years ago. We can not keep up with technology changes with no more commitment than that. It appears to me that technical schools/colleges must have increased funding just to meet their current operational costs.(utility cost example) Many of the schools are unable to expand or grow because of facilities and the funds that are needed to operate new and expanded programs. It appears that some schools will be forced to close programs if funding resources aren't addressed. If we expect these institutions to meet business and industry employee needs we must be prepared to fund them properly.

This is a simple question. Why is it that technical/schools and colleges who continue to maintain a 90-95% placement of graduates, are not recognized as a first class educational system? We all know that technical education is expensive due to the high tech equipment required. The Board of Regents has recommended a 19.1 % increase which seems to be at least an attempt to address these problems.

The Governor's Vision 21st Century Task force chaired by Lt Governor Gary Sherrer indicated that the current workforce mix has changed dramatically over the past several years. The current mix is 20 percent managerial and professional, and 60 percent skilled and 20 percent unskilled. The task force recommended increased funding of capital outlay items for community colleges, technical schools and technical colleges. It also recommended increased funding of technology in Kansas schools by the legislature. If you look carefully at the workforce mix, you can see that these recommendations make good sense. The legislature needs to adequately deal with the 80%.

Students that are trained in our technical schools/colleges remain in our state and become tax payers. We are able to keep most of these graduates in our state according to the followup studies. This is certainly the perfect opportunity for the Kansas Legislature to promote HIRE education. Yes, HIRE education. Don't let this great opportunity go by, whatever it takes, lets get the job done. Thank you Very Much.

NORTHWEST KANSAS TECHNICAL SCHOOL

P.O. Box 668 1209 Harrison Goodland, Kansas 67735-0668 Ph. 785-899-3641

January 22, 2001

The Honorable Governor Bill Graves 2nd Floor – State Capitol Building Topeka, KS 66612-1590

Dear Honorable Governor Graves:

The Northwest Kansas Technical School Area Board of Control is deeply concerned with funding of technical education in Kansas. The vast majority of the workforce of Kansas requires less than a four-year college degree, yet technical education has received little attention for needed funding.

If Kansas is to progress then technical education, the means by which the skills of our workforce are obtained by individuals, must be funded at a MUCH higher level than is currently recommended to the Kansas Legislature.

A waiting list of students pre-enrolled, having paid the \$60 enrollment fee, is attached to this letter. This list sets forth the names, towns and states from which students have enrolled to enter three of the technical programs offered at NWKTS.

My point, Governor, is that funding is the one and only reason that these students cannot be served in a timely manner. Your review, consideration, and ultimate support is needed to assure that technical education is funded at the Kansas Board of Regent's recommended level in order for technical education to be delivered to those desiring such training. Remember that a trained workforce promotes the Kansas economy and assures jobs for our Kansas citizens. Our economy will slow not grow without technical schools/colleges being funded adequately to prepare skilled graduates for Kansas employers.

Sincerely,

Larry Keirns Director

LK/sak

Topeka Plant 2000 Highway 24 Topeka, KS 66618

Monday, January 29, 2001

Kansas House Higher Education Committee Attn: Chairman Lisa Benlon and Committee Kansas State Capitol Topeka, Kansas

Dear Chairman Benlon and Committee,

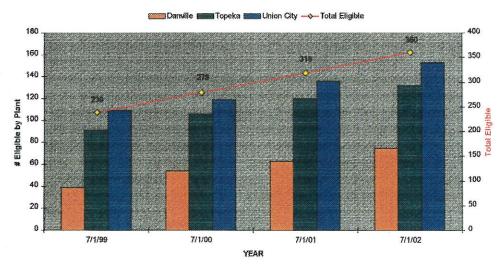

Thank you for the opportunity to come before you and present this important information concerning the health of our community and the obstacles for future growth.

While not a native Kansas or Topekan, I come before you today with a story to tell. It's a story of a community on the edge of experiencing a revitalization similar to the growth seen in surrounding communities. It's a story of a community pulling together in a variety of ways to meet the needs to ignite a burst of economic growth, which will not only help those of us in this room, but our children and grandchildren. But, every story must have a antagonist, and ours is the critical shortage of technically skilled workers.

Goodyear-Topeka is Topeka's largest private employer. We have around 1,800 associates earning top dollar wages. Our payroll exceeds \$100 million, and some estimate that those dollars turn over in our community an average of five times. Goodyear makes annual purchases upwards of \$34 million. Yet, as our work force ages and more and more associates retire, taking with them their 30 plus years of experience, we are unable to fill the void. As I said, we offer some of the best wages and benefits, yet we find ourselves advertising for technically skilled associates in three states—and still coming up empty handed. We are not alone in our plight. As a member of Go Topeka and the Chamber of Commerce, I've been able to work with other business leaders in the community. What I've found is that all major employers in Topeka are suffering from the lack of a skilled work force base in Topeka. The problem can be seen nationwide.

Maintenance Retirement Eligibility

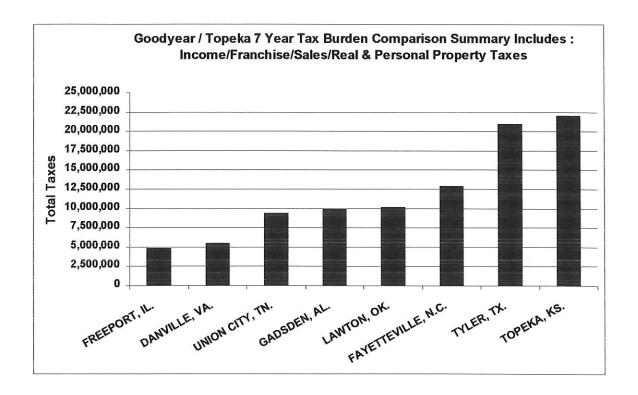

for Danville, Topeka, & Union City Plants

RED LINE SHOWS TOTAL RETIREMENT ELIGIBILITY, read on right scale

House Higher Education 1-29-01 Attachment 4 When business looks for a new site to build a factory or corporate headquarters or an existing business looks where to invest its capital investment dollars, it considers many factors including workforce availability, training availability, land development, and tax burden. All of these factors combine to present a picture of a location's competitiveness. And, all of these factors combine to, at times, limit what an employer can do without assistance.

As you can see from the chart below, Goodyear-Topeka has the highest tax burden of all of Goodyear's North American plants. This translates into fewer dollars available to be reinvested into our workforce.

Keeping up with Technology to Remain Competitive

The root of the issue is the fact that as technology continues to evolve at an incredible pace, we need our workforce to evolve. Even in the three years I've been at the Topeka Plant, our world has changed dramatically. More and more of manufacturing is becoming automated for speed, safety and quality reasons. But, the human element is still the most essential element. Without associates to program, run and maintain the equipment, we lose our competitiveness and ultimately our livelihood.

What can be done?

Goodyear-Topeka strongly supports a cooperative training program between the state, city and county and local employers. Goodyear's tire plant in Lawton, Okla., has pioneered a program that could serve as a role model for our community, and a similar program began last year in Danville, Va.

In Lawton, the local technical school provides associates and prospects the general and technical education and training. Then, Goodyear works with the school to provide the process and equipment specific training for its factory.

The state of Oklahoma, recognizing the value of a trained workforce for not only attracting new business, but retaining existing business has made a sizeable investment in the Great Plains Technical School Program. The state underwrote the construction of the building and the purchasing of the training equipment. There is also an annual state grant for "existing industry" training.

I know that you are aware of the attraction a well-trained force is for new business to our community. By investing in our present situation, we are also investing in our future success.

Chairman Benlon and all committee members, I urge you to seriously review the lack of skilled workers in our community and consider the impact this lack will have on our current businesses and the opportunities to attract new business. I also strongly urge you to consider helping out the community by financially supporting initiatives to develop our vocational technical training for the benefit of existing employers, including Goodyear, Hallmark, Hills, and others, as well as helping to attract new business to our Topeka community.

Thank you.

Sincerely,

Arty Straehla Plant Manager

WORKFORCE TRAINING

&

KAW AREA TECHNICAL SCHOOL

The Workforce 2020 study done by the Hudson Institute in Indianapolis says that by the year 2020, 82% of the jobs will not require a college education, but will require a technical education, and 50% of those jobs have not yet been created. We are in a technological revolution that is having a major impact on our labor force, and we must prepare for tomorrow's labor needs today. The key to future economic growth is the ability to train tomorrow's high skilled workforce.

Topeka/Shawnee County's wage and salary employment (pace of work) grew at exactly half the pace of the statewide total from 1988 to 1997. Statewide total wage and salary employment grew by 20.6%, while employment growth for the Topeka MSA grew by only 10.3%. Topeka's anemic growth rate can be partly attributed to our lack of skills necessary to fill the increased demand for skilled labor in three of our major employment cluster groups for growth: manufacturing technology, computer technology, and medical technology.

During the past year, GO Topeka (the economic development organization of the Greater Topeka Chamber of Commerce) made 149 visitation calls on existing business and industry. The survey taken on these calls indicated that the lack of skilled labor to fill available jobs was the number one concern of business. A follow-up mail survey to the major employers in the market asked them to identify the critical job titles for their growth in the future. The jobs identified from the survey fell into seven cluster groups; manufacturing/distribution; information and communication; health care and bio-medical; electronics/software and hardware technicians; financial services, automotive and truck technicians; and aircraft/airframe and engine technicians, all skilled positions with good wages.

GO Topeka formed a Workforce Development committee (WDC) to improve the workforce in our community. A vision statement and mission statement were created by the WDC and five subcommittees were started to create goals, objectives and action plans to improve our workforce skills. They are: Needs Assessment;

Education & Training; People Recruiting; Target Industries; and Funding. The Workforce Development Committee has visited two successful technical training centers in Oklahoma and Texas, and we now realize how far we are behind our neighbors in capital funding for technical training. We discovered a great need to expand the capabilities of the Kaw Area Technical School to meet the needs of existing industry for technical training and have the potential to attract new high tech industry to our community.

We have a great opportunity before us if we act soon. Our Kaw Area Technical School can become the state-of-the-art training center for maintenance technicians and computer technicians in Northeast Kansas. To do this we need to invest adequate capitol in training modules, equipment, classroom space and instructors. You can make a difference for Shawnee County and Northeast Kansas with an investment in technical training at the Kaw Area Technical School. If we don't make the investment in our technical schools we will not only not have the ability to attract new high tech industry, but we will not be able to keep the industry we have. The window of opportunity to position our state as a leader in technical training will not be open very long. Other states are already gearing up to meet the demand, and if we do not move now, our opportunity for economic growth will be gone.

I urge you to take the initiative to act now and give Topeka/Shawnee County and all Kansas the ability to train for the new jobs of tomorrow.

State of Kansas

House Committee on Higher Education Monday, January 29, 2001

In Support of Technical Education
Jim Schwarzenberger
Vice President, Workforce Development
Wichita Area Chamber of Commerce
Chairman, General Advisory Board, Wichita Area Technical College

Point #1

The availability and sustainability of a qualified workforce is the number one concern for site selectors and CEOs all across the country. In Wichita, studies by the Center for Economic Development and Business Research show the challenge becoming more acute over the next thirty years. "Workforce concern" translates to:

- 1. Current availability of specific basic and technical skills
- 2. Capacity to effectively and efficiently train on short notice and often in specialized "niches" to meet customer specifications
- 3. Facilities, equipment, instruction and sustaining resources to ensure the capacity to respond in the future

Our state needs to support technical training much more aggressively in order to attract new employers, but perhaps more importantly, to enable existing employers to grow their business in Kansas.

Point #2

Our economic development competitors are showcasing (to prospects) their technical training schools and colleges while we...well consider:

- One of our largest facilities which houses office, communications technology, marketing, accounting, and health/human services was built 90 years ago and hasn't undergone much noticeable renovation since.
- The facility housing our engineering technology program was formerly an elementary school built in the 50s. Almost no exterior or interior work has been done to enhance the facility.
- Construction of the newest WATC facilities dates back to the mid 60s.
- Our manufacturing and construction trades disciplines are offered in facilities built in the 40s.
- Equipment offering hands on training using current or recent technology is also often inadequate.

Our state needs take a look at national "best practices" and needs to consider the economic development consequences of not investing more in technical training.

Point #3

We need to attract students to technical professions/trades

- The backlog of students in various technical disciplines is used to help justify more attention for technical education. But the numbers don't fully reflect the demand nor the potential interest. Employers are increasingly being forced to "bid each other up" for needed skills and are off-loading work to service/product providers outside Kansas. The lack of local skilled labor is one of the primary reasons this is occurring. In addition, many more students would likely be attracted to technical programs offered in modern facilities with modern technology and with the best instructors. Funding streams have not made that very feasible in Wichita.
- Some 75% of high school students pursue a four-year college education upon graduation. About 50% of these drop out or stop out after, or during, the first year. All of this goes on while 80% of the jobs available are better prepared for through vocational/technical training. Incidentally many employers financially support all employees who pursue a four year degree during employment.
- Lending credence to the above point, more college graduates appear to be entering our technical schools and colleges to pick up the technical being demanded by employers. (Example: the WATC is training engineers in the latest computer aided drafting applications.)

Our state and all its communities need to promote technical education and training as an exciting and productive path to meaningful careers and a prosperous lifestyle.

In summary, I believe Kansas stands to lose an increasing share of the high skill, high wage jobs to its competing states across the country. Further, we risk losing more and more of our manufacturing base and other "high tech" industries which are the bed rock of our economy. The development and continued support of an outstanding technical training system is of great importance.

Testimony of Jon K. Miles Before the

Higher Education Committee

Kansas House of Representatives Monday, January 29, 2001

Good afternoon, Madam Chairman Benlon and members of the Committee. My name is

Jon K. Miles and I am Vice President of Governmental and Technical Services for Kansas

Electric Cooperatives, Inc. (KEC), the statewide association of rural electric cooperatives in

Kansas.

I would like to take the opportunity to thank you for allowing me to speak on behalf of

Manhattan Area Technical College in support of adequate and continued funding.

To provide you with information regarding the rural electric cooperatives in Kansas, each

member of the Committee has received a copy of the KEC (statewide) Directory for 2001.

For over 30 years, the rural electric cooperatives of Kansas and the Manhattan Area

Vocational Technical College have enjoyed an excellent business and industry relationship. In

1970, Manhattan Vocational Technical School first offered students the opportunity to receive

classroom instruction and field training to become apprentice linemen in the electric utility

industry.

The Vo-Tech College in Manhattan has been an extremely valuable resource for electric

apprentice linemen and the electric cooperatives in Kansas. Since the early '70s, rural electric

cooperatives have almost exclusively hired students from the Vo-Tech school to fill employment

needs. Oftentimes, the school has not been able to supply the full needs of the cooperatives in

the state because of classroom size.

House Higher Education

1-29-01

Attachment 7

The current classroom size is a maximum of 18 students. The total number of applications received by April 7, 2000 for the January 2001 class was 75. As you can see, there was a significant waiting list for placement of 18 students.

For the employer, the school has provided the student the basic electrical and mathematical knowledge necessary to perform such technical duties as line construction, power substation and distribution transformer connections, etc. In other words, the student is ready to go to work under the close supervision of an authorized and responsible supervisor.

For the employee, the one-year school and on-the-job training provides the student an opportunity to decide whether the job is a good fit within one year at very little cost to the student.

I am proud to be a graduate of the Manhattan Area Vo-Tech School, now the Manhattan Area Technical College. Being somewhat undecided on a career, upon graduating from a high school near Hutchinson, Kansas, I enrolled in the late spring of 1972 to attend the Vo-Tech School in Manhattan. When I contacted the school in Manhattan, I found that the next Electrical Power and Distribution class would start in January 1973. I was informed that the class was almost filled and if I planned to attend, an application would be needed as soon as possible to make sure a space would be reserved. To my knowledge and based on personal contact with the school since 1973, I believe every class has had a waiting list for students to enter the Vo-Tech College. I believe that this speaks well for the success of the electrical power program that has prepared nearly 500 students to enter the electric utility industry. The rural electric cooperatives employ approximately 500 outside line personnel across the state. As a result of the successful program at Manhattan, a good portion of the 500 employed are graduates of the Vo-Tech College.

As indicated in the table below, the school has an excellent student placement record.

Year	Completed	Placed	Employed	Avg. Hr. Rate
1999	18	17	16	\$12.39
1998	18	18	15	12.33
1997	17	16	16	12.24
1996	17	17	17	12.51
1995	18	18	18	11.89
[Enroll 18/yr.]				

Electrical Power and Distribution Class -- Application History

Year	Applications On-File	Placed on Waiting List
Nov. 2000	115	97
Dec. 1999	107	89
Dec. 1998	104	86
Nov. 1997	100	82
Dec. 1996	123	103
Dec. 1995	110	92

The class was designed to begin in January and run through May. At that time, students would be released to an electric utility for the summer to receive on-the-job training. The student would return to school in the fall and graduate in December. The student would have received the basic skills and safety training to enter the job market.

I would like for the Committee to know that I testified in March of 1996 supporting legislation (HB 2606) to convert the Manhattan Area Vo-Tech School to a technical college. This legislation gave added credibility to vocational training across the state, providing students added incentive to enroll and earn credit hours toward an Associates Degree. As you know, vocational schools have struggled for acceptance in the academic and business arena. For those students who wish to focus on a chosen technical profession, technical colleges provide excellent education and career opportunities.

Thank you for allowing me to testify in support of the Manhattan Area Technical College.

January 29, 2001

Kansas House Higher Education Committee Kansas State Capitol Building 10th & Jackson Street Topeka, KS

Dear Chairman Benlon and Committee Members:

I am the president of Boelte-Hall Litho, Inc. Our firm currently employs 45 people and provides printing for approximately 350 customers. My father bought the company in 1967. At the time, the company had two employees and was located in the basement of H & R Block's headquarters in Kansas City, Missouri. Very soon after buying the company, we moved to Roeland Park, Kansas. In 1980 we built a new building in Roeland Park and remain there. We feel that Kansas is a good state to do business in.

I was born in Lawrence, Kansas and have lived in Kansas my entire life. I attended school in the Shawnee Mission School District, graduating from Shawnee Mission West. I also attended the University of Kansas. In my opinion, my education has been second to none. My daughter graduated from Shawnee Mission West and the University of Kansas. When attending "Back to School Nights" at West, I was amazed that many of my teachers were still there. Most impressively, they were the best ones.

One of the reasons for our company's success is the people we are able to employ. Most of our employees are Kansans. The school system is a major reason many of them choose to live in Kansas.

The printing industry is largely composed of small companies. Eighty percent of printing companies have 20 or fewer employees. Thus, we are not well known as a large industry. Yet, we employ almost 15,000 in Kansas.

We have a hard time finding employees, particularly for our manufacturing operations. For example, in October of 1997, a bindery machine operator resigned. We did not find a suitable replacement until May of 2000. In December of 1999 we doubled our capital investment with the purchase of a new press. It offers increased productivity and capacity. We plan to double our sales over the next two years. If we are successful, we will need ten to fifteen additional production employees. This is the most difficult part of the plan.

We have hired graduates of Kansas City Kansas Area Technical School and Flint Hills Technical College. However, there are never enough graduates. The Printing Industries of the Heartland has become active in working with KCKAT to assure they are teaching the skills our industry needs. I have volunteered to serve on the advisory committee. Two years ago I did not believe graduates from this program learned the skills necessary to be a Boelte-Hall employee. Thanks to recent improvements, I am excited to consider graduates from this school. I will be greatly disappointed if the school is not adequately funded.

We also face serious challenges in recruiting students for these schools. For the last two years I have served as a judge in the Skills USA Challenge program held in Kansas City. The students in this competition have impressed me greatly. Unfortunately, the ones who impress me the most are not from Kansas. I know that technical education is alive and thriving in other states.

In summation, it is my opinion that technical education in Kansas does not come close to the education quality Kansas offers in high schools and colleges. Industry in the state needs your help in addressing this situation.

Sincerely,

Stephen E. Hall President

TOM WHITAKER Executive Director

LEGISLATIVE TESTIMONY
By the
Kansas Motor Carriers Association

Presented to the House Higher Education Committee Representative Lisa Benlon, Chairman Statehouse, Topeka Monday, January 29, 2001

MADAM CHAIRMAN AND MEMBERS OF THE COMMITTEE:

My name is Tom Whitaker, executive director of the Kansas Motor Carriers Association (KMCA). We appear here this afternoon representing our 1,450 member firms and the Kansas trucking industry.

KMCA has a long history of support for truck driver training at the Southwest Kansas Technical School in Liberal, the Wichita Area Technical School and Fort Scott Community College. In 1989, KMCA initiated and passed legislation to dedicate \$2.00 from every commercial drivers license fee to the truck driver-training fund. Moneys in the truck driver-training fund are distributed to area technical schools in Kansas to provide courses for truck drivers. In addition, KMCA is currently partnering with the Southwest Kansas Technical School to market the use of a truck-driving simulator to train and retrain truck drivers. The SWKTS simulator is the only one in the Midwest and was displayed at the capitol last week during Kansas Trucking Industry Day at the Capitol.

Recent studies, including those by the Gallup Organization and the American Trucking Associations Foundation, estimate the need for 80,000 new truck drivers annually over the next decade, primarily within the long-haul truckload sector of the industry. Without a new supply of qualified drivers, the trucking industry will have difficulty meeting the freight demands of the Kansas and U.S. economy. The trucking industry currently transports nearly 82 percent of the nation's freight.

In Kansas, the trucking industry employs almost 100,000 people. More than 35,000 of them are professional truck drivers. Our industry pays an estimated \$3.0 billion in salaries, and we serve every address in Kansas. In order to continue to meet the transportation needs in Kansas we must have a reliable and affordable program for training quality truck drivers. Kansas' area technical schools provide that critical need for the industry.

Continued funding for this valuable asset is imperative to continued growth of the Kansas economy in this global business climate. Thank you for the opportunity to appear before you today to express our support for Kansas's area technical schools. We would be pleased to respond to any questions you may have.

Ansas House of Representatives Higher Education Committee January 29, 2001

Testimony of: A. James Oldebeken, CAE President, Printing Industries Association of the Heartland (PIAH)

Introduction

PIAH is affiliated with Printing Industries of the America, the world's largest trade association for the graphic communications industry.

PIAH was founded in metro Kansas City in 1887 and serves the printers and related firms in Kansas and Western Missouri. Our industry is Kansas' third largest manufacturing employer with 14,914 employees (excluding those of Hallmark Cards) at 548 firms and sales of just over \$2 billion dollars.

Background

Kansas is a good state in which to do business. It is a right-to-work state. We find Kansas agencies, such as air quality and Department of Revenue more "business-friendly" than other states in the region. The Department of Commerce offers significant incentives for firms to relocate in the state.

Over the last two years, our printing companies owners have actively and enthusiastically worked with Kansas City Kansas Area Technical School and their administrators, John Lind and Hal Shute, to develop the KCKATS Graphic Communications program into a "world-class" technical program. I am excited and proud to tell you that we are half-way to our goal because the program becomes the only the second printing program in the state to attain PrintED accreditation!

Because of this generally favorable business environment, members of the Kansas House have not heard much from our industry.

Due to the printing industries' significant problems with finding trained workers, you will be hearing from us more often on this issue.

<u>Industry Position on Technical Education in</u> Kansas

I know your schedules are busy and this agenda is jam packed so my remarks will be very brief. Our observations are:

- Neighboring states such as Oklahoma, where I worked for five years, has a dramatically stronger technical training program. As a result, the State was successful in recruiting two of the nation's largest printing companies to build printing facilities in the state: World Color in Stillwater and QuadGraphics in Oklahoma City.
- The system for drawing students into the technical programs needs to be improved. Although some programs have a waiting list, other programs, like graphic communications, need greater coordination and awareness in the schools and community.
- Across the nation, other states and legislatures and thoroughly studied the workforce needs of their industries. I am not sure that we in Kansas have a handle on the nature and extend of the problem.
- The relationship between state government, education and industry can be better. Through communications, cooperation and partnership we can do a better job of fixing the problem.

~ Over ~

ےttom line:

- Our industry needs a minimum of 500 trained workers to fill positions in our industry in 2001 and in following years
- When we are unable to fill openings, industry becomes less competitive with other states and regions in the U.S.
- Kansas will not be able to attract major employers unless we develop a reputation nationwide for excellence in technical education.

I cancelled a business trip to be here today. I and many of our printing industry leaders, including CEOs of major employers, have spent considerable time to assist Kansas Technical Schools. I assure you we will continue to work with educators and legislators to develop new workers.

Lester C. Thurow once said:

"Social welfare programs may be a mater of ethics and generosity, but education and training are not. I am willing to pay for, indeed insist upon, the education of my neighbors' children, not because I am generous but because I cannot afford to live with them uneducated."

I am also reminded of the words of printing's "Patron Saint," Benjamin Franklin, a printer, whose words regarding the revolution also apply today regarding need for government, schools and industry to work together: "We must all hang together for if we do not, assuredly, we will all hang separately."

Printing Industries Association of the Heartland 250 Richards Road, Suite 267 Kansas City, MO 64116 816/421-7877, Fax 816/421-7073 jimo@veracom.net

Workforce Training

January 29, 2001

KANSAS CHAMBER OF COMMERCE AND INDUSTRY

Testimony Before the

House Higher Education Committee

by

Jim Edwards Senior Vice President

Madam Chair and members of the committee:

Thank you for the opportunity to appear today and express KCCI's concern for the lack of skilled workers needed desperately by Kansas business and industry.

The Kansas Chamber of Commerce and Industry (KCCI) is a statewide organization dedicated to the promotion of economic growth and job creation within Kansas, and to the protection and support of the private competitive enterprise system.

KCCI is comprised of more than 2,000 businesses which includes 200 local and regional chambers of commerce and trade organizations which represent over 161,000 business men and women. The organization represents both large and small employers in Kansas, with 48% of KCCI's members having less than 25 employees, and 78% having less than 100 employees. KCCI receives no government funding.

The KCCI Board of Directors establishes policies through the work of hundreds of the organization's members who make up its various committees. These policies are the guiding principles of the organization and translate into views such as those expressed here.

This lack of workers it not a problem that is unique to Kansas. It is faced by many states around the country. The one area that Kansas might differ in is that we don't necessarily lack employable bodies to fill the jobs, but we do lack the bodies with employable skills. An example of this is that the aircraft companies could, by their estimates, put 4,000 persons to work today in the companies in Wichita but can't find persons with the skills, or persons that want to work in that field.

of study. They end up leaving the state or going back to gain additional skills in order to find work.

According to Kansas Department of Human Resources sources, there are approximately 100,000 jobs open in business and industry around Kansas today. When you put an economic figure on these ready, yet unfilled jobs, you are talking about a loss of taxable income to the state in excess of \$2.5 billion, at the lower wage computations and up to around \$3.9 billion at a more realistic wage rate for the unfilled jobs.

The Legislature, Kansas schools and Kansas parents will soon have to address the increasing importance of skilled vocational training in Kansas.

I appreciate the opportunity to share these thoughts with you and would be happy to answer questions you might have.
