MINUTES OF THE HOUSE COMMITTEE ON TAXATION

The meeting was called to order by Chairman John Edmonds at 9:00 a.m. on January 30, 2001 in Room 519-S of the Capitol.

All members were present except:

Rep. Kirk, excused

Committee staff present:

Chris Courtwright, Legislative Research Department

April Holman, Legislative Research Department

Don Hayward, Revisor Winnie Crapson, Secretary

Conferees appearing before the committee:

Brian Hall, KPMG

John Sundeen, Waddell & Reed

Others attending:

See attached list.

The Chairman opened the meeting by asking for bill introductions.

By unanimous consent bill will be introduced to reclassify land used for recreational uses as requested by Representative Gatewood.. [HCR 5010 - Constitutional amendment reclassifying land devoted to recreational use for property tax purposes]

The Chairman called attention to material being distributed:

Memorandum prepared by Chris Courtwright, Principal Analyst, on Fiscal Notes on Property Tax Exemption Bills with Fiscal Notes for <u>HB 2008</u>, <u>HB 2009</u>, and <u>HB 2043</u> (<u>Attachment #1</u>).

Dept. of Education letter January 24 to Ben F. Barrett providing, as requested during Mr. Barrett's presentation on Revenue Side of School Finance January 17, data for 2000-01 Estimated supplemental general fund budget, general fund state aid, general fund state aid ratio, and general fund mill rate; alphabetically by County (pp 2-12), low to high aid ratio (pp 13-19) and low to high mill rate (pp 20-26) (Attachment #2).

Testimony of Kansas Farm Bureau on <u>HB 2008</u>, <u>HB 2009</u> and <u>HB 2043</u>, heard January 29 (<u>Attachment #3</u>).

Hearing was opened on:

HB 2061 - Income taxation of investment fund service companies

John Sundeen, Chief Finanical Officer for Waddell & Reed Financial, Inc., presented testimony in support of the bill (<u>Attachment #4</u>). He introduced Brian Hall, Senior Manager with KPMG, who discussed the research paper prepared by KPMG (<u>Attachment #5</u>). Mr. Sundeen and Mr. Hall responded to questions from members of the committee.

Hearing on HB 2061 was closed.

Chairman Edmonds appointed a subcommittee consisting of Representatives Palmer, Tafanelli and Gatewood to study this proposal and report to the Committee February 8.

Committee adjourned at 10:00 a.m. Next scheduled meeting is January 31.

MEMORANDUM

January 29, 2001

To: House Taxation Committee

From: Chris W. Courtwright, Principal Analyst

Re: Fiscal Notes on Property Tax Exemption Bills

The purpose of this memo is provide a more thorough discussion regarding the fiscal impact of bills which affect the property tax base, including the three bills we heard this morning - HB 2008, HB 2009, and HB 2043.

Any time legislation is enacted which narrows the property tax base (or slows the rate at which the base is currently projected to expand), two primary things occur which have policy implications of potential interest to the Committee.

First off, such legislation inevitably causes a property tax shift on the local level to all other kinds and classes of property within the same taxing jurisdiction as the property being given the tax-favored treatment. (Because you have unhooked another horse from the wagon, the remaining horses have to pull that much harder.)

Secondly, such legislation DOES have a fiscal impact at the state level in that it reduces the amount of local effort which will be produced by the 20-mill school district general fund levy. If it is the intent of the Legislature to continue to fully fund school finance up to the levels proposed in the Governor's Budget, increased expenditures in excess of the amounts recommended by the Governor would be needed to offset the loss in local effort. Also, the 1.5 mill levy earmarked for state building funds would raise less money than is contemplated in the Governor's Budget and under current projections.

I have spoken with the Department of Revenue and the Budget Division about making sure in the future that BOTH of these caveats are attached to fiscal notes assigned to legislation affecting the property tax base, including even those bills for which an impact is not readily identifiable.

2627 KFB Plaza, P.O. Box 3500, Manhattan, Kansas 66505-8508 / (913) 587-6000

January 29, 2001

Rep. John Edmonds, Chair House Taxation Committee Statehouse, Room 171-W Topeka, Kansas 66612

Dear Rep. Edmonds,

Thank you for the opportunity to share Kansas Farm Bureau's support for the concepts contained in HB 2008, HB 2009 and HB 2043 with you and the other members of the House Taxation Committee. As you know, HB 2008 provides a property tax exemption for property used in producing agricultural ethyl alcohol, HB 2009 provides a similar exemption for property used in producing biodiesel and HB 2043 enacts a property tax exemption for property used in dispensing E-85 motor fuel.

Kansas Farm Bureau strongly encourages increased efforts to develop, promote and utilize traditional and alternative products derived from the crops and livestock produced by our state's farmers and ranchers. Converting Kansas grown grain into renewable fuels is one such initiative. The use of crop-based fuels can reduce U.S. reliance on foreign oil, expand grain markets, improve air quality and protect water quality.

Farm Bureau policy supports consumer education, promotion efforts and tax credits to expand the production and use of crop-based alternative fuels. Although, technically the three tax bills discussed herein are tax exemptions, rather than credits, the goal of the bills appears to be that of providing incentives to increase the production, sale and use of renewable fuels. Farm Bureau has advocated for this type of initiative for many years.

Our farmer and rancher members adopted new language at their 82nd Annual Meeting this past November that urges agriculture producers to take the lead in utilizing cropbased fuels in their vehicles and machinery. Our policy also advocates the use of ethanol and biodiesel in state operated vehicles and machinery. As a means of encouraging greater retail availability of bio-fuels, our voting delegates adopted new policy language calling for all fuel marketers, including farmer cooperatives, to make ethanol blend and biodiesel fuels available to consumers. The tax exemption provided in HB 2043 is an incentive to make this happen.

House Taxation

Date 1/30/01

Page 1 of 2

Agriculture producers need a variety of markets and uses for their Kansas-grown products. We encourage the committee to look favorably on proposals, such as the concepts contained in HB 2008, HB 2009 and HB 2043, designed to help foster and develop traditional and non-traditional uses for crops and livestock.

Thank you again for the opportunity to share the views of farmers and ranchers from across Kansas with the House Taxation Committee. If you have questions or desire further information from us, please contact us at the following numbers:

Topeka Legislative Office: 785/234-4535 Lobbyist Message Center: 785/234-5500

Sincerely,

Leslie J. Kaufman, Associate Director

Public Policy Division Kansas Farm Bureau

"Source State" Tax Legislation for Investment Companies

Testimony before the Kansas House Tax Committee January 30th, 2001 9:00 am

Mr. Chairman and members of the House Tax Committee: I want to thank you for your interest in House Bill number 2061 and for giving me the opportunity to appear before you this morning. I am John Sundeen, Chief Financial Officer for Waddell & Reed Financial, Inc..

As you may know, our company is headquartered in Overland Park, though we have offices in 14 locations throughout Kansas and in over 300 locations throughout all 50 states. Waddell & Reed has been headquartered in Kansas since 1990, when we moved here from Kansas City, Missouri. We are an investment company focused on the businesses of mutual funds and financial planning. Our market is middle Americans located in smaller metropolitan and rural communities across the country, where our advisors meet with individuals one-on-one to help them develop plans for their financial future. Our products are 43 mutual funds that have some of the best performance track records in the industry. You may not be familiar with our company because our advertising is very limited.

We are a public company with \$2.9 billion in market capitalization, listed on the New York Stock Exchange, and included in the Standard & Poors 400 stock index. Our employees and advisors total approximately 4,000 people located around the country. Of those, 725 work in Kansas.

W&R has been around since 1937, but we think of it as a new company. We have only been on our own for 2 years, since being spun-off from an Alabama insurance company in November 1998. In that time we have been successful, but there is much more that we want to accomplish. We are now able to invest in ourselves and in our community in a way that an Alabama company didn't care to. Particularly because they were so focused on insurance. We are much more interested in growing Waddell & Reed, which is in a high growth business benefiting from an aging baby boom generation moving into their peak years of investing for retirement.

Despite having \$40 B of Assets Under Management and over \$500 million of revenue a year, a company our size is only a mid-tier player in the mutual fund industry on the national scale. We are facing significant competition. Baron's magazine stated that Waddell & Reed, as a mid-tier firm will have to quote-unquote "pair-off" with another firm or quote "need to dance pretty fast to keep up with the music" of "spending heavily to build their brands, maintain expensive marketing arms and plow cash into new technology". To give you a specific example, Fidelity reportedly spends \$1.5 billion a year on technology, whereas Waddell & Reed spends around \$15 million; that is only one percent as much. Added to that kind of competition, with the recent repeal of the Glass Steagull Act at the federal level, banks are now able to get into our business as well as insurance companies, which have been able to do so for years. Kansas investment companies must grow and we must invest in our business to survive this kind of competition.

Unfortunately, our state taxes put us at a disadvantage to our competitors. As I am sure you are aware, in Kansas as in other states, banks and insurance companies have special state tax rates that are lower than regular corporations. (Waddell & Reed is taxed as a regular corporation.) In addition, 10 other states, have passed legislation, similar to what we ask you to consider today, that allows mutual fund companies to pay lower taxes. In these states, mutual fund companies pay taxes on income in proportion to how many of their customers reside in the state — what we are calling the "source state".

Due to current Kansas tax statutes, we are essentially penalized for having our headquarters in this state. Less than ten percent of Waddell & Reed customers reside in Kansas, yet half of our income is subject to Kansas income tax. We would contend that it would be more logical to base our income taxes on where the customers reside – which is what we are proposing. This type of legislation was passed in Missouri in 1997 and was referred to as "Source-State Taxation".

States with this type of legislation include:

- New York
- Massachusetts
- New Jersey

Source State Tax I	egislation, Page 2	101
AH No	. 4	
Page_	2	13

- Connecticut
- Rhode Island
- Maine
- Utah
- Kentucky
- Texas
- And Missouri.

It just so happens that much of the mutual fund industry is concentrated in those 10 states.

If this legislation were to be passed, it would help the mutual fund industry to invest in itself and to grow. As a Kansas resident I would think that the mutual fund industry is one of the more desirable industries to have in our state — it's clean, non-polluting, and provides stable, good-paying jobs — so we should do what we can to attract and retain mutual fund companies. KPMG has conducted a research effort and published a research paper that supports this thesis.

Waddell & Reed plans on growing earnings between 15 and 20% per year over the long-term. Kansas will benefit from that growth. If we don't grow we might be gobbled up by a giant European bank or insurance company, which lately have been making numerous acquisitions of U.S. companies like ours.

But we are excited about our own prospects. The demographics are still great for this industry, as baby boomers are still increasing their investments for their retirement.

In a sense, we are suggesting that Kansas join us in making an investment in this industry by supporting "Source State Taxation". The bottom line is this: we suggest that Kansas mutual fund companies pay less tax on income that has a source from out-of-state customers. We appreciate any consideration you can give to what we have discussed today.

At this point I would like to introduce Brian Hall, who is a Senior Manager with KPMG, and who will offer some brief comments about their research. Brian and I will be happy to respond to any questions at the conclusion of Brian's remarks and after the hearing.

Analysis of Competitive Landscape of Mutual Fund Industry Prepared on Behalf of Kansas Advocates for Source-State Legislation for Investment Advisors

Prepared by

December 18, 2000

House Taxation
Date 13001

AH No. 5

Page 1 of 21

National Landscape

The mutual fund industry has been growing at a much faster rate than the overall economy. On a national basis, assets under management have grown at a rate in excess of 24% per year in the last three years. Total assets under management approximate \$6.846 trillion as of 12/31/99.

The industry is presently enjoying unprecedented growth as a result of a number of coinciding factors. These factors include: a prolonged bull market, a growing economy, governmental policies which promote contributions to pension plans and a larger number of net savers due to the maturing of the baby boomer generation.³

However, net cash inflows to mutual funds were significantly less in 1999 over the previous year according to the Investment Company Institute ("ICI"), an industry trade group. This means that the amount flowing into mutual funds was still a positive number, but less flowed in than in the previous year. Rationale for the decline in the overall growth rate includes the volatility of financial markets and an abundance of alternative attractive investment vehicles.

In recent years the industry has seen a few giant players arise. The biggest firms in this industry, Fidelity, Janus and Vanguard (the "Big 3"); garner approximately two-thirds of all money fund inflows. Another trend that has bearing upon the industry has been the development of mutual fund supermarkets such as Charles Schwab. A third significant development for the industry is the repeal of the Glass-Steagall Act. This repeal allows banks and other financial institutions, which were previously prohibited from selling investment products, to enter into the mutual fund industry. This will result in increased competition in an already competitive marketplace.

A mutual fund's ability to attract investors is a product of a number of factors, all of which are associated with the ultimate return the fund earns for its investors. Among such factors are the recruitment of talented fund managers to pick the right investments, the ability to efficiently market and distribute products and the reduction of costs associated with the management of the funds assets.

 $^{^1}$ 2000 MUTUAL FUND FACT BOOK, (ICI, Washington, D.C.), May 2000 (see table Chapter one page 2) at http://www.ici.org/pdf/00fb_ch1.pdf.

According to research performed by the ICI, fund shareholders tend to invest in funds with relatively lower costs than other funds of the same class. According to the ICI's survey, seventy-eight percent of all investor accounts are in funds that charge [management fees] less than the industry average. The ICI also notes that the larger funds have a distinct advantage over smaller funds as the larger funds maintain much lower expense ratios than their smaller counterparts. This implies that larger funds are more competitive in attracting new investment due to the economies of scale enjoyed by the larger funds.

Consequently, it has become increasingly important for small to mid-sized fund companies to reduce costs in order to remain competitive. Barron's noted that in the near term, mid-sized mutual fund companies will have to react quickly to these industry dynamics, consolidate with larger mutual fund companies, or carve out smaller niches within the mutual fund market.

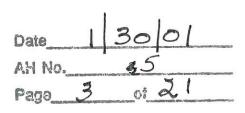

Kansas/Missouri Landscape

Kansas mutual fund companies have also experienced prosperity over the last five years. Kansas investment managers have assets under management of nearly \$58 billion, much of which is mutual funds. There are nine different companies that control a measurable share of the market within the state. These organizations employ approximately 2000 people with an average annual wage of \$47,993. This average wage is among the highest of all industry groups in the state.

Kansas mutual fund companies are expected to experience growth over the next five years, that will keep pace with the industry's growth rate at the national level. The Kansas Department of Human Resources ("KDHR") projects employment for financial management personnel to grow 19 percent each of the next five years.

In addition to the "Big three" mutual fund companies (one of which has significant Missouri ties), Kansas companies also face intense competition from Missouri domiciled companies. The state of Missouri ranks among the top ten states in the nation in mutual fund companies domiciled within its borders.

¹² Id.

Many of the states which have a large mutual fund presence have enacted legislation to encourage the continued growth of the industry. This type of legislation has been shown to precipitate growth of the mutual fund industry in these progressive states. Kansas has not yet offered similar legislation to help level the playing field for Kansas-based mutual fund companies.

Current States with Special Mutual Fund Apportionment

A level playing field will help Kansas-based mutual fund companies to compete with larger out-of-state mutual fund companies. In order to level the income tax playing field, Kansas mutual fund companies must be allowed to apportion their income differently.

Like most other industries these days the mutual fund industry is in a state of flux. Reliable industry sources predict consolidation in the industry. None of the Kansas-based mutual fund companies falls into the category of an industry Goliath. If the Kansas-based companies were acquired by these larger out-of-state companies, it is highly likely that many of the jobs now located in Kansas would be moved to another state. While the proposed tax legislation may not prevent takeovers within the mutual fund industry, it can make Kansas-based companies more competitive.

Date 1/30/01 AH No. 5 # 01 21

¹⁴ States that have passed legislation include: Connecticut, Kentucky, Maine, Massachusetts, Missouri, New Jersey, New York, Rhode Island, Texas and Utah. See e.g., RSMo §143.451, NY CLS Tax § 210.3(a)(6), Utah Code Ann. § 59-7-319(3).

¹⁶ See attached Exhibit A showing assets under management by Kansas-based investment managers, much of which is mutual funds.

Present Taxation of Mutual Fund Industry in Kansas

The current scheme of taxation for a mutual fund company in the State of Kansas is described below. The income generated from its day to day business is identified as apportionable income taxable by the various states in which the company conducts business.¹⁷ The amount taxable in any given state is driven by the apportionment factor in each state. In Kansas, the apportionment factor is computed as the average of three separate factors—(1) the payroll factor, (2) the property factor & (3) the sales/gross receipts factor. ¹⁸ It is the sales factor however that is key to the taxation of mutual fund companies. Under present rules in the State of Kansas, nearly all of the receipts of a Kansas-based mutual fund company are categorized as Kansas sales which increases the Kansas sales factor and thereby increases these companies' Kansas income tax liability.¹⁹

Other States' Procedures for Income Taxation of Mutual Funds

Most states begin with a three factor method of apportionment like the one Kansas uses.²⁰ However, in recent years there has been a trend towards using the single factor method of apportionment. This move to single sales factor apportionment allows market states to grab a larger percentage of the sales made into the state from businesses located outside the state.²¹

With respect to the mutual fund industry many states have seen fit to grant the industry special methods of apportionment which tend to more accurately reflect the companies activities in these states. The special apportionment factors granted to mutual fund companies in certain states all came about because of competitive pressures and the desire by states to attract and retain the mutual fund industry in these states. These states can be broken down into two categories.

The first category of state laws allows mutual fund companies to be taxed on a single-factor basis. Within this first category are Massachusetts, Connecticut, Rhode Island,

Date___|30|0| AH No.__5# Page__5_of_2/

¹⁷ See generally 1 JEROME HELLERSTEIN and WALTER HELLERSTEIN, STATE TAXATION ¶ 9.01 (2nd Edition 1990). See attached Exhibit C demonstrating present calculation of Kansas tax liability.

¹⁸ K.S.A. § 79-3279; KAR 92-12-53 See attached Exhibit C demonstrating Kansas' current apportionment formula.

 $^{^{19}}$ KAR 92-12-100 See attached Exhibit C and D illustrating the calculation of Kansas tax liability. 20 See generally 1 Jerome Hellerstein and Walter Hellerstein, State Taxation ¶ 9.06 (2^{nd} Edition

²¹ This trend cuts across industry lines and is not limited to the mutual fund industry.

²² See generally 1 JEROME HELLERSTEIN and WALTER HELLERSTEIN, STATE TAXATION ¶ 10.06 (2nd Edition 1990). By its very nature the apportionment concept is not designed to exactly measure income and expenses in each state. Instead, the concept of formulary apportionment is intended to approximate a company's activities and income in a state. Hence, where traditional methods of apportionment do not accomplish this objective, special methods are appropriate. Many states have now concluded that the traditional three-factor method of apportionment does not accurately reflect the activities of mutual funds domiciled in their states. For a list of states with special apportionment for mutual fund companies, see footnote 14.

Texas, Kentucky, Maine and Missouri. However, because of the workings of the Multistate Tax Compact (MTC), the mere adoption of the single sales factor method of apportionment provides very little relief to mutual fund companies. This is because the MTC sources service income based on where the costs of performance are incurred.²³ Based upon this costs of performance test most mutual fund companies would end up with nearly all of their sales being sourced to their state of domicile since most of the costs incurred in the sale of the fund shares would be at the funds headquarters.²⁴ Thus, adoption of a single factor apportionment method alone provides little, if any tax benefit.²⁵

To prevent this result from occurring, these states have not only adopted a single sales factor method of apportionment, but have also granted the fund companies a special method of computing the sales factor numerator that does not follow the traditional MTC costs of performance test. The method for computing the sales factor adopted by these states looks through the fund sales to the state of residency of the shareholders in the underlying mutual funds. It is this combination of single-factor apportionment coupled with shareholder based sourcing rules that would provide a truly level playing field for Kansas-based mutual fund companies. Thus, if a Kansas-based mutual fund were to sell shares to an investor in St. Louis, these sales would be sourced to Missouri and would only be placed in the denominator of the Kansas sales factor. This is the same sort of factor relief which Missouri-based mutual funds presently enjoy. 28

In the other category, states have opted to keep all three factors in the computation, but have adopted a special method for calculating the sales factor which excludes out-of-state sales altogether.²⁹ Thus, under this methodology, the property and payroll factors are computed normally, but the out-of-state sales are included only in the denominator of the sales factor. The in-state sales are placed in the numerator and denominator, and in-state sales are distinguished from out-of-state sales based upon the residency of the shareholders of the funds.³⁰

This methodology has been adopted by New York, New Jersey and Utah.³¹ The sales factor sourcing under this method once again sheds the MTC rule for sourcing based upon costs of performance in favor of a method that effectively excludes out-of state sales from the numerator of the apportionment factor. Under this methodology, if a New

²⁴ These headquarters costs would include accounting, marketing, payroll and other administrative costs.

²⁵ See attached Exhibit F.

²⁶ One example of this type of statutory provision can be found in Missouri at §143.451.2(5), RSMo.

²⁷ This would be the result under the proposed legislation. Under current law, this sale most likely ends up in both the numerator and denominator of the sales factor because the majority of the fund's cost of performance would be in Kansas. See attached Exhibit G.

²⁸ §143.451.2(5), RSMo.

²⁹ See NY CLS Tax § 210.3(a)(6) and Utah Code Ann. § 59-7-319(3).

³⁰ With respect to sourcing based on the underlying shareholder's state of residency, this second category of statute is identical to the first. See attached Exhibit E.

³¹ See NY CLS Tax § 210.3(a)(6) and Utah Code Ann. § 59-7-319(3).

York based mutual fund were to sell shares to a Kansan, the sale would only appear in the denominator of the New York sales factor.³²

Missouri Legislation

In 1997, the State of Missouri passed legislation similar to that already adopted by Massachusetts and Connecticut.³³ Under the Missouri law, mutual fund companies were allowed to elect a special single-factor apportionment method.³⁴ A qualifying mutual fund can elect to be taxed based upon the residency of the mutual fund shareholder.³⁵ The 1997 legislation enabled Missouri-based mutual funds to become more competitive in the industry.³⁶

Without this mutual fund apportionment legislation, Missouri mutual fund companies could be taxed under either the single factor or three factor methods of apportionment.³⁷ However, under either of these methods, a Missouri mutual fund would have had a relatively high Missouri apportionment factor. Under the three factor method, a Missouri based company would have most of its property and payroll in Missouri. Since mutual fund companies derive revenue from the sale of services, the sales factor would be nearly 100% Missouri based on the costs of performance test.³⁸

Even though Missouri had a pre-existing single-factor method of apportionment, use of this method would not provide much tax relief to Missouri-based mutual funds. Before the 1997 legislation, a Missouri-based fund company choosing the single factor method would still find itself with a Missouri apportionment percentage higher than fifty percent. As a service provider its sales factor would be computed using the source of income test

³³ The bill passed the Missouri legislature during the 1997 legislative session and became effective on January 1, 1998.

⁹ §143.451, RSMo.

Date 1 30 01
AH No. 5
Page 7 of 21

³²See NY CLS Tax § 210.3(a)(6).

³⁴ See also §§620.1350-1360. These sections require mutual fund companies to provide certain data to the Missouri Department of Economic development to qualify to use the special method of apportionment in §143.451.2(5).

³⁵ See § 620.1355, RSMo regarding qualification for the election.

³⁶ It should be noted that most out-of-state mutual funds were probably not materially impacted by the Missouri legislation. If these companies elected the traditional three factor method their costs of performance most likely dictated sourcing sales to Missouri customers to the States in which the funds were domiciled. If these out-of-state funds were using the Missouri single-factor method, the result would be that fifty percent of the sales to Missouri customers would most likely have been put in the numerator of the Missouri single factor apportionment factor. After the 1997 legislation, most out-of-state companies likely continued to file in Missouri using the three factor method which sources none of the sales to Missouri. Moreover, because this new method is elective, no company would choose it unless there was a benefit.

³⁷ See §§ 32.200 & 143.451, RSMo.

³⁸ This applies to the three-factor method of apportionment. Under the costs of performance test all of the revenue generated from a service is generally allocated to the state where the majority of the service providers costs are incurred in performing the service. We are assuming that a Missouri-based fund company would incur the majority of its costs of performance in Missouri on all of its sales rather than just upon sales to Missouri shareholders.

in Missouri. Since the fund company's headquarters would be located in Missouri, there would be a presumption that all sales would be included in the numerator of the sales factor at either fifty percent or 100 percent in accordance with the statutes at that time. Because of this treatment of Mutual Fund Industry sales, it was necessary for Missouri to enact legislation which would more accurately reflect this service industry apportionment.

Thus, until 1997, when Missouri mutual fund companies were granted the right to apportion their sales based upon shareholder domicile, Missouri mutual fund companies received little benefit from the Missouri single factor method of apportionment. It was not until the single-factor method was combined with shareholder sourcing that Missouri mutual fund companies were able to lower their state income taxes to effectively compete with companies domiciled in tax favored jurisdictions.⁴²

Proposed Treatment of Mutual Fund Industry in Kansas

Kansas should adopt legislation to put Kansas-based mutual funds on a level playing field with mutual funds located in sister states like Missouri. This level playing field is necessary to help Kansas companies to compete with their larger counterparts. Taxes paid by the mutual fund companies must ultimately be passed along to the underlying mutual funds which causes the costs associated with the funds to rise. In today's information age, consumers tend to shop around for funds with the lowest costs.

The Securities and Exchange Commission requires all costs for running a fund to be published. The mutual fund industry is fiercely competitive, and many sophisticated consumers closely scrutinize the costs associated with each fund. These costs are important because all other things being equal, funds with lower costs will provide investors with higher returns, and it is these lower cost funds that will have a competitive advantage in the marketplace. 44

Since 1980, the average cost for running equity mutual funds has decreased by about forty percent. As evidence that investors are cognizant of the costs associated with mutual funds, seventy-eight percent of all investor accounts are in funds that charge less than the industry average costs as of 2000. 46

A single factor apportionment method with apportioned sales sourced based upon the residency of fund shareholders would put Kansas companies on the same footing as their competitors in many other states. Under this proposal sales of fund shares to Kansas residents would be placed in the numerator and denominator of the Kansas sales factor while sales to residents of other states would be placed only in the denominator of the Kansas sales factor.⁴⁷

Kansas Taxation of Other Types of Financial Institutions

Other types of financial institutions such as banks and insurance companies are already taxed based on a methodology which caters towards financial institutions. The traditional three factor method of apportionment used by the Kansas income tax was developed in an era when most businesses were manufacturing concerns. As such, the three factor method does not always work very well when it is applied to a service provider such as a mutual fund company. This means that for most financial institutions, the three-factor method will either attribute too much income to a state or too little because the factors are not geared to measure the types of activities undertaken by financial institutions.

With the repeal of the Glass-Steagall Act, the mutual fund industry in Kansas will be competing not just with out-of-state mutual fund companies, but in the future banks will also be vying for a share of each saver's funds. In many states, including Kansas, banks are taxed differently because state legislatures realized early on that the banking business was different than manufacturing. In Kansas the tax rate for banks is 4.375% compared with the tax rate of 7.35% imposed on other corporations. As this tax rate for banks is almost 3 percentage points below the rate imposed on mutual fund companies, big out-of-state banks will be at a competitive advantage over in-state mutual funds.

Again, for Kansas based mutual funds to survive in the highly competitive world of mutual fund investing there must be a level playing field. Without providing Kansas' mutual funds with state taxation on the same basis as large out-of-state mutual funds and large out-of-state banks, the relatively smaller Kansas-based mutual funds, already at somewhat of a competitive disadvantage,⁵¹ will be even further hindered in their efforts to compete.

Practical Example of How Revenue is Taxed

For purposes of this example, the Company is based in State A, and earns \$100 of income. Of this \$100 in income, \$50 is from sales to residents in State A and \$50 is from sales to residents of State B. All of Company's sales are qualifying sales from the

Oate 1 30 01 AH No. 5 Page 9 of 21

⁴⁷ See Exhibit G.

 $^{^{48}}$ See generally 1 Jerome Hellerstein and Walter Hellerstein, State Taxation \P 8.06 (2nd Edition 1990).

⁴⁹ Glass -Steagall was repealed by the Gramm-Leach-Bliley Act signed into law on November 12, 1999.

⁵⁰ See K.S.A. § 79-1107 and § 79-32,110(c).

⁵¹ 2000 MUTUAL FUND FACT BOOK, (ICI, Washington, D.C.), May 2000 at http://www.ici.org/pdf/00fb ch3.pdf

provision of investment advisory services.⁵² All of Company's property and payroll is located in State A. Where the three-factor method is used assume that the state adopts an evenly weighted version where property, payroll and sales are each weighted one-third of the overall apportionment factor. Except in scenario two below it is assumed that the Company is a mutual fund.

Scenario 1—State A uses the Three-Factor method of apportionment⁵³

Under this scenario the apportionment factor is computed by adding together the property payroll and sales factors and dividing the sum by three.

Property Factor (100%) + Payroll Factor (100%) + Sales Factor (100%) = 100%

In this example, the property factor would be 100%, the payroll factor would be 100% and the sales factor would also be 100% because the costs of performance would be considered to be in State A. Hence 100% of the income earned by the Company will be taxed in State A even though 50% of its sales are made in State B because the majority of the costs Company incurs in making sales into State B occur at Company's headquarters in State A.⁵⁴

Scenario 2—State A uses the Three-Factor method of apportionment and Company is a manufacturer of widgets. 55

Under this scenario the apportionment factor is computed by adding together the property payroll and sales factors and dividing the sum by three.

Property Factor (100%) + Payroll Factor (100%) + Sales Factor (50%) 3 = 83.33%

In this example, the property factor would be 100%, the payroll factor would be 100% but the sales factor would also be only 50%. For manufacturing businesses, sales are sourced based upon the location of the customer to whom the goods are shipped. Using this methodology, Company's State A sales factor will be 50% since half of its sales are to customers in State A. Hence, the overall apportionment factor for the Company would be 83.33%. ⁵⁶

Date 13001

AH No. 5

Page 10 of 21

⁵² This relates to the requirements in other states' laws that only allows the special method of apportionment to be applied to qualifying sales. Other categories of income earned by mutual fund companies must be apportioned under the traditional methods of apportionment allowed under each state's laws.

⁵³ This is Kansas' present methodology.

⁵⁴ See Exhibit D.

⁵⁵ This is Kansas' present methodology for manufacturers.

⁵⁶ See Exhibit E. Because this company sells tangible personal property (i.e. widgets), rather than services/intangibles, Kansas sales would be those widgets shipped to Kansas. Those widgets shipped anywhere other than Kansas would be sourced to the destination state (unless subject to throw-back rules).

Scenario 3—State A uses the Three Factor method but allows mutual fund companies to compute the sales factor based on the shareholder's residence.⁵⁷

Under this scenario the apportionment factor is computed by adding together the property payroll and sales factors and dividing the sum by three.

Property Factor (100%) + Payroll Factor (100%) + Sales Factor (50%)

3

= 83.33%

In this example, the property factor would be 100%, the payroll factor would be 100% and the sales factor would also be 50% because the sales to customers in State A constitute 50% of Company's total sales. Hence, the apportionment factor for Company would be 83.33%. ⁵⁸

Scenario 4—State A uses the Single Factor method and allows mutual fund companies to compute the sales factor based on the shareholder's residence.⁵⁹

Under this scenario there is no property or payroll factor. The sales factor numerator only includes sales to residents of state A.

Resident Sales (\$50) Everywhere Sales (\$100) = 50%

Thus, the sales factor is 50%. Here State A can only tax 50% of Company's income based on the fact that only 50% of Company's sales are to residents of State A.

Corporate Income Taxes As a Percentage of Kansas Tax Collections:

Corporate income taxes made up 6.3% of the overall taxes collected by the State of Kansas in 1998.⁶¹ The largest piece of the Kansas tax pie was derived from sales taxes collections followed by individual income taxes, motor fuel taxes and corporate income taxes.⁶² Together the sales tax and the individual income tax made up 77.9 percent of Kansas's overall state tax collections.⁶³

It is estimated that if this legislative proposal passes, Kansas corporate income tax collections relating to the mutual fund industry will be reduced by approximately \$4,000,000 - \$6,000,000 in the law's first full year in effect. In future years, this amount will rise and fall with the income of the mutual fund companies based in Kansas. There

Date 1 30 01 AH No. 5

⁵⁷ This is the model presently adopted by New York, New Jersey and Utah.

⁶² Id.

⁶³ Id.

should not be a loss of any other type of tax directly attributable to the proposed amendment to Kansas' apportionment methodology for mutual fund companies.

As an industry that pays higher than average wages, the mutual fund industry in Kansas has an approximate payroll of \$112,000,000. Assuming an effective tax rate on these wages of 7%, this translates into \$7,800,000 of Kansas income tax paid by mutual fund employees.⁶⁴

If Kansas mutual fund companies continue to grow at rates in excess of 15%, approximately 1500 new jobs will be created in the next five years. If we can assume that the average industry wage will also follow its historical level, then the average wage in the industry in 2005 will be \$65,290. Thus, if the wage and employment data track historical norms, in the year 2005 the mutual fund industry will have Kansas employment of 3500 and an average wage of \$65,290. This translates into a projected 2005 Kansas payroll of \$228,515,000. If we again assume a seven percent effective tax rate applied to this Kansas payroll the total Kansas individual income tax collections attributable to the mutual fund industry will be \$15,996,050 in the year 2005.

The mutual fund industry has some direct feeder industries that supply it services. Thus, there are other industries that benefit from the mutual fund industry's presence in the state of Kansas. With the growth in the mutual fund industry and the stock market, many companies are emerging to take on the "back office" accounting responsibilities for the larger mutual fund companies. One of the world's largest mutual fund service providers has quadrupled in size in the past decade and anticipates the demand for their services to continue to grow. As the mutual fund industry grows in Kansas, these other industries receive a benefit which in turn generates additional tax flows into the coffers of the State of Kansas.

Pending Legislation:

There is legislation pending before the Kansas legislature that would adopt the Missouri methodology for taxing mutual funds. This would put Kansas-based companies on an equal-footing with Missouri based companies which are competing for much of the same regional investment dollars. This methodology would also put Kansas-based mutual fund companies on equal footing with many other large out-of-state mutual funds. Passage of this legislation should help to insure the continued prosperity of the mutual fund industry in this state. It would be beneficial to the state of Kansas to support an industry which pays above average and wages and is not a pollution concern.
