

MINUTES OF THE SENATE EDUCATION COMMITTEE

The meeting was called to order by Chairman Jean Schodorf at 1:35 p.m. on March 9, 2006, in Room 123-S of the Capitol.

Committee members absent:

Committee staff present: Carolyn Rampey, Kansas Legislative Research Department
Theresa Kiernan, Revisor of Statutes
Shirley Higgins, Committee Secretary

Conferees appearing before the committee: Michael Stewart, Director of Research & Analytics, Standard & Poor's School Evaluation Services
Jason Kingston, Lead Project Analyst and Associate Director, Applied Analytics, Standard & Poor's
Dale Dennis, Deputy Commissioner, Kansas State Department of Education

Briefing on Final Report on Standard & Poor's Kansas Educational Resource Management Study

Michael Stewart, Standard & Poor's School Evaluation Services, noted that the study was funded by the Kauffman Foundation, and the study's focus reflects the need to increase the "return" on educational investments, not simply the amount of money spent. He went on to discuss the three phases of the study. Phase 1 provided academic, financial, and demographic data on every district for analysis. In this phase, the districts which performed better on state reading and math tests than most other comparable districts were identified (highly resource-effective districts). In Phase 2, four districts were selected for site visits and in-depth study. In this phase, "best practices" were documented to help other districts improve. Phase 3, the final report, offers state policymakers and local school leaders a set of guiding principles around the effective use of money, staff, time, and programs. (Attachment 1)

Jason Kingston, Standard & Poor's, discussed the use of financial resources in Kansas' highly resource-effective districts (Phase 3). In the process, he referred to a Standard & Poor's booklet concerning the final phase of the study entitled, "Phase III: A Synthesis of Highly Resource-Effective District Strategies." He noted that individualized reports and all information in the booklet could be found on the Internet at www.schoolmatters.com. He explained that the whole purpose for analyzing and documenting the resource allocation practices was to provide an information resource for district superintendents, state education officials, and lawmakers. He discussed the findings when the 17 highly resource-effective districts were compared to the statewide average of all districts in Kansas and to the state's 20 less resource-effective districts.

Senator Apple asked, "How do we turn this from information into making an impact throughout the state?" Mr. Steward responded, "It's actually a conversation that we've been having with Governor Sebelius. She's asked the same question because these studies run the risk of not being read or, even if they are read, put on a shelf. Several recommendations we've provided the Governor that were talking about how to best move forward would involve working directly with a professional association, such as the Council of School Superintendents or the Kansas Association of School Business Officials or with the educational service agencies, and working with them directly on how to disseminate this information. We've also proposed to create units of study for those individuals who are in our colleges of education, particularly the graduate level, who are learning and getting the degree programs and the certifications that are going to be needed to assume the role of superintendent or school business official so that these kinds of findings can find their way into colleges and schools of education as we prepare our future leaders. We've even probed some possibilities of how to tie these findings in with the school improvement plans that schools and districts have to prepare if they do not make adequate yearly progress because we know that they have to actually address not just the pedagogy and instructional programs that they will attempt to change but also how they will use their resources to affect those changes. That would involve working closely with the professional associations and with the departments of education, which we hope to be able to do as we proceed further."

CONTINUATION SHEET

MINUTES OF THE Senate Education Committee at 1:35 p.m. on March 9, 2006, in Room 123-S of the Capitol.

With regard to a comparison table shown on page six of the handout, Senator Vratil commented that he found it interesting that the most highly resource-effective districts actually spend less in the classroom than the state average and the low resource-effective districts. Mr. Stewart responded, "Yes, we noticed the same thing, not only with the detailed findings in Kansas, but we've also published a report for the nation as a whole as part of the School Matters project I mentioned where we had actually looked at upwards of fourteen states to determine whether or not there is any correlation between the percentage of funds spent in the classroom and the percentage of students who are meeting or exceeding state standards in reading and math. In all fourteen states, we found no significant correlation between those two."

Senator Vratil asked, "Would you, as statistical analysts, say that there is a correlation or is not a correlation if I tell you that Kansas provides funding for 135,000 at-risk students, those who qualify for free lunch, but there are 200,000 students who are receiving at-risk services in Kansas. Is there a correlation there?" Mr. Stewart answered, "I would imagine you would have overlap, but not having seen the data or the definitions of the those terms, I would hesitate to give any definitive answer. But, because students who are eligible for free or reduced priced lunch are by definition coming from economically disadvantaged households, that, in and of itself, is generally regarded as a risk factor, a factor that is highly correlated with academic performance. So my guess is that there would be some overlap, but, again, not knowing the technical specifications of the data you referred to, I'd need to reserve judgement."

Senator Schodorf commented to the conferees, "I couldn't agree with you more that Kansas cannot afford to simply spend it's way to 100 percent proficiency. That's the dilemma that we are in right now, not just with the lawsuit but with the proficiency levels to 100 percent. That's the problematic area – what we're going to do about that. One thing that kind of jumped out also was that the districts were spending less than the average but they also spent more on principal's salaries. Would you say that it was two things, they increased contracts for teachers for planning." Mr. Mitchell responded, "That is probably one of the most fascinating findings in the study. In all four districts, the teacher contracts exceeded the number of student contact days between 11 and 15 days. In three of the districts, they had 15 more days in the teacher contract than they did student contact days. The other one was about 10 or 11. Overall, that was very significant. We found it significant because it was unusual. We asked around. We were told that, at least according to the teacher's union in Kansas, that number of days is typically 5, not 15. Certainly the districts that we interviewed attributed some of their better performance to that feature of the contract."

Senator Schodorf asked Mr. Stewart if the additional minutes per day for reading and math was statistically significant. Mr. Stewart said, "Whether it was statistically significant was not the question we asked, but it was significant enough particularly on the cumulative basis. The better question is, is it educationally significant. I would say so, in my judgement."

Due to the time limitation, Senator Schodorf closed the discussion on the study.

Dale Dennis, Deputy Commissioner, Kansas Department of Education, distributed copies of memorandum on school finance along with a computer printout (SF6072) which provided further detailed information on how the mandatory 2.5 percent of local option budget required to be transferred to the general fund works, based upon his understanding of the concept. He noted that the information was in county order and from low to high. He followed with a column explanation and responded to questions. (Attachment 2) Mr. Dennis also gave a column explanation for the handout he distributed at the March 8 meeting regarding increases in state aid within selected categorical programs as provided in the Senate school finance plan, **SB 584** (SF6071).

Written testimony submitted by Dr. Walt Chappell, President, Educational Management Consultants, regarding the definition of the at-risk student was distributed to the Committee as requested by Dr. Chappell. (Attachment 3)

The meeting was adjourned at 2:35 p.m.

The next meeting is scheduled for March 13, 2006.

Setting the Standard

Kansas Educational Resource Management Study

Standard & Poor's School Evaluation Services

Michael Stewart and Jason Kingston

March 9, 2006

Educational Resource Management Study

Governor Sebelius commissioned S&P to conduct a precedent-setting study to help the state improve the "return" on its educational investment. The study was funded by the Kauffman Foundation.

The study provides a set of guiding principles to help school districts cost-effectively produce higher levels of student achievement.

The focus isn't simply on conserving resources, but on strategies for maximizing student achievement with the resources at hand.

The study's focus reflects the need to increase the "return" on educational investments, not simply the amount of money spent.

Senate Education Committee
3-9-06
Attachment 1

Increasing the “Return” on Spending, Not Simply the Amount Spent

Why is it important to increase the return on educational resources?

- The State already devotes more of its budget to education than to any other funding category.
- Prior to the 2005 court order to increase educational spending, Kansas spent an average of nearly \$7,500 per student.
- The return on that spending was a statewide 67% proficiency rate on state reading and math tests.
- On a pro-rated basis, a 9% proficiency rate was achieved for every \$1,000 spent per student.

Increasing the “Return” on Spending, Not Simply the Amount Spent

- At that average rate of return, Kansas probably cannot afford to simply spend its way to 100% proficiency, even with the recent increase in spending. (Consider the improbability of spending over \$11,000 per student in every district.)
- The state needs to find ways of increasing the rate of return on educational investments, not simply the amount of money spent.
- To do this, “best practices” need to be identified from within the education community for increasing cost-effectiveness.

Phase 1 of the Study

The Kansas Educational Resource Management Study was conducted in three phases.

Phase 1 (Spring and Summer 2005): Kansas provided academic, financial and demographic data on every district to S&P for analysis.

S&P identified 17 highly resource-effective school districts.

Data "profiles" of these districts were published by S&P.

To insure statistical reliability, only those districts with 200 or more students were analyzed.

Identification of Highly Resource-Effective Districts (HREDs)

Arkansas City	Hays	Nickerson	Scott County
Baldwin City	Hesston	Olathe	Spearville
Geary County	Lincoln	Renwick	Stafford
Halstead	Macksville	Rock Creek	Vermillion
			Wamego

These districts performed better on state reading and math tests than most other comparable districts with similar enrollments of economically disadvantaged students.

Their spending was also more cost-effective than most other comparable districts (i.e., they achieved more for what they spent).

Each district made Adequate Yearly Progress under NCLB.

Demographic Context

Demographics are an important consideration, because poverty is strongly correlated with student achievement.

Principal's quote:

"If two districts have the same level of economically disadvantaged children but one outperforms the other, then we need to ask ourselves the tough questions. What are they doing differently? How can we raise performance in the lower-performing district?"

S&P considered each district's enrollment of students with economically disadvantaged backgrounds, limited English proficiency, and disabilities when analyzing the district's performance. This allowed us to identify districts that performed higher than statistically expected.

Phases 2 and 3 of the Study

Phase 2 (Fall 2005): Four districts were selected for site visits and in-depth study. S&P analyzed how they made the best use of their money, staff, time, and programs to raise achievement.

Their "best practices" were documented to help other districts improve.

Phase 3 (Winter 2006): The final report offers state policymakers and local school leaders a set of guiding principles around the effective use of money, staff, time, and programs.

Use of Financial Resources

Kansas Highly Resource-Effective Districts:

- Strategically allocate resources to get the best “return” on investment (the most student achievement for the amount of money spent).
- Make pro-active, highly intentional decisions based on data analysis, using a cycle of assessment, evaluation, and improvement.
- Align spending with the strategic plan, especially with goals for learning and instruction. Some districts even require staff to provide statements on trade-offs, alternatives, and implications. The key is rigor, not rigidity.
- Combine wise spending with smart cost-avoidance (cooperative purchasing options, targeted outsourcing, and economies of scale).
- Exercise shared authority between the central office and individual schools over major resource decisions.

Specific Examples – Financial Resources

- Olathe saved over \$4,400,000 in 2005 through a structured cost-avoidance program consisting of 69 specific strategies.
- Arkansas City has taken advantage of lower interest rates to refinance its bonded indebtedness.
- Geary County outsources student transportation to a local company more cost-effectively than it can provide the service itself.
- Scott County made the politically difficult but cost-effective decision to close an under-utilized elementary school.
- Districts invested in energy-saving utility equipment.

Highly Resource-Effective Districts Compared to Other Districts

To create statewide comparisons, the 17 Highly Resource-Effective Districts (HREDs) were compared to the statewide average of all districts in Kansas, or in some cases districts that responded to a survey.

HRED's were also compared to the average of the state's 20 Less Resource-Effective Districts (LREDs).

Comparison of Financial Resources

- On average, HREDs spent less per student (\$6,986) than the state's average expenditure of \$7,321 per student. They also spent less than the LRED average of \$7,495 per student.
- This doesn't necessarily mean that districts should reduce their spending. It only suggests that they may be able to increase their cost-effectiveness.

Highly Resource-Effective Districts Compared to Other Districts

HREDs spend less money than LREDs on instruction, central administration, operations and maintenance. However, they spend more on instructional support and pupil support.

SPENDING COMPARISON — 2004

	HREDs	LREDs	STATE AVERAGE
Core Spending (\$ Per Student)	\$6,986	\$7,495	\$7,321
Instruction (out of Core Spending)	65.4%	67.3%	66.5%
Instructional Support (out of Core Spending)	4.1%	2.5%	3.5%
Pupil Support (out of Core Spending)	4.0%	2.9%	3.4%
Central Administration (out of Core Spending)	4.9%	5.7%	5.4%
School Administration (out of Core Spending)	7.4%	7.7%	7.0%
Operations & Maintenance (out of Core Spending)	12.6%	13.6%	13.3%
Other (out of Core Spending)	1.5%	0.4%	0.8%

Use of Human Resources

Kansas Highly Resource-Effective Districts:

- Use aggressive recruiting techniques to get the highest quality staff.
- Support and enhance classroom teachers' performance with on-the-ground instructional guidance and assistance.
- Make staff assignments in the best interest of students, and make use of flexible staffing configurations to meet changing student needs.
- Invest in targeted professional development to ensure sustained effectiveness of strategic program investments. Encourage the adoption of effective practices from outside the district.
- Use teachers as expert resources for key decisions.

Specific Examples – Human Resources

- Olathe recruits new teachers from five states and 40 universities.
- Geary County uses the Haberman screening process to interview teachers for their ability and willingness to work with at-risk youth.
- Online employment applications offer convenience and increase the pool of candidates comfortable with the use of technology.
- Arkansas City and Olathe assign expert teachers known as "academic coaches" and "instructional resource teachers" to work with faculty (especially new hires) to insure instructional quality.

Highly Resource-Effective Districts Compared to Other Districts

Comparison of Human Resources

- Although average salaries are similar, the minimum and maximum salaries for HRED teachers and principals are higher than those of all other districts that responded to the statewide survey.
- HRED principal salaries start at \$60,659 on average, versus \$54,910 for other districts. The average maximum salary for HRED principals is \$78,241, while all other districts have an average maximum of \$71,474.
- HREDS have smaller student teacher ratios than the state average, especially in middle schools, with 14.5 students per teacher in HREDS compared to 16.1 students per teacher across all districts.

Use of Time

Kansas Highly Resource-Effective Districts:

- Place a premium on the amount of time students spend learning math and English.
- Focus staff meetings on learning and instruction rather than administrative “housekeeping.”
- Extend the faculty’s contract year to increase teacher development and planning time.

Specific Examples - Use of Time

Arkansas City reallocated time in its school schedules, resulting in a 100% increase in the time students spend learning math and reading. The district's elementary students now spend 210 minutes a day on these subjects — 90 minutes on math, 90 on reading, and 30 on writing.

After-school tutoring and summer school programs extend the time on core subjects even further for struggling students. Scott County provides mandatory after-school sessions for all grade levels.

Geary County estimates that 40% of its professional development and planning time is spent on math and 40% is spent on English.

Use of Programs

Kansas Highly Resource-Effective Districts:

- Consider using only research-based programs that have been thoroughly evaluated.
- Ensure that district assessment programs generate the performance data needed to guide program decisions and changes.
- Invest in academic support programs for at-risk populations to narrow achievement gaps.

Specific Examples – Use of Programs

Geary County leadership cites its strong investment in academic intervention and support programs as a key element of its success in improving graduation rates.

When considering the implementation of a new program, Geary County visits other districts already using it, and then involves its own faculty in evaluating the program's "fit" prior to its implementation.

Geary County also utilizes an unusually demanding process of peer critiques of the district's school improvement plans. Every other year, each school is provided with structured feedback on its school improvement plan from other schools in the district, who share their insights and best practices.

Highly Resource-Effective Districts Compared to Other Districts

Comparison of Time and Programmatic Resources

- HREDs spend significantly more time on instruction in core subjects at the elementary level, especially in English language arts.
- HREDs spend an average of 113 minutes per day in reading and writing in elementary schools, versus 91 minutes per day for all the other districts.
- HREDs spend an average of 71 minutes per day on mathematics in elementary schools, versus 61 minutes per day in all the other districts.

Using the Study's Findings

State policy makers can use this report to:

- Inform educational investments and policy decisions
- Encourage local school districts to analyze and adopt effective practices
- Identify organizational “performance gaps” across districts
- Address the public’s desire for demonstrated cost-effective use of educational resources

March 8, 2006

TO: Senate Education Committee

FROM: Dale M. Dennis, Deputy Commissioner of Education

SUBJECT: School Finance

Attached is a computer printout (SF6072) which provides further detailed information on how the mandatory 2.5 percent of local option budget required to be transferred to the general fund works based upon my understanding of the concept.

This information has been provided in county order and low to high on Columns 5, 7, and 8.

COLUMN EXPLANATION

- | | |
|--------|---|
| Column | 1 -- September 20, 2005 FTE enrollment |
| | 2 -- 2.5 percent of the estimated general fund under computer printout SF6052 |
| | 3 -- Estimated local option budget state aid using 2005-06 LOB state aid ratio of the 2.5 percent LOB in Column 2 |
| | 4 -- Local taxes (Column 2 – 3) |
| | 5 -- Projected mill rate to fund the amount in Column 4 |
| | 6 -- Estimated additional equalization aid from 81.2 percent to 100 percent |
| | 7 -- Amount per pupil of the 2.5 percent LOB authority (Column 2 ÷ 1) |
| | 8 -- Amount per pupil in additional equalization aid 81.2 percent to 100 percent (Column 6 ÷ 1) |

THE "AT RISK STUDENT" DEFINITION MUST BE CHANGED!

There are many assumptions about "At Risk" students which have nothing to do with teaching or learning. To start with, the use of the words "They have found" to imply that there is research to justify not taking an honest look at the complex issues which determine why some students have a hard time learning what is taught in our classrooms is both wrong and a gross over simplification.

The income level of a child's parents has little to do with any child's ability to learn. This is true in all populations and races. However, using the "Free or Reduced Lunch" criteria makes it easy for many urban and rural school districts to include large numbers of students who are having no problem learning. Furthermore, they don't have to verify each student's test scores or learning ability. Instead, the criteria for "At Risk" is based on each parent's or guardian's perceived income.

Unfortunately, this pads the funding these districts receive with no assurance that these millions of extra State dollars ever go to these "low income" students OR students who are truly "At Risk" of dropping out of school--for a whole variety of reasons.

For example, the Kansas graduation requirements assume that every K-12 student is going on to college. This "one size fits all" curriculum forces many kids into classes which have nothing to do with their interests in life or skills to earn a living for themselves and their future families. They get bored, burnt out and frustrated with the extra history, English, math and science classes which are required when they would prefer to learn practical skills which will allow them to get a job after graduation and earn a living wage.

This faulty "FREE LUNCH" definition of "At Risk" also ignores those students who do not qualify for Special Education plus those who are bored stiff with what they are forced to sit through each day they go to school. There is too much emphasis on memorizing useless trivia to pass multiple choice tests and not enough challenging classes which allow students to learn how to make decisions about real issues. We need a renewed emphasis on classes which teach modern technology, manufacturing and business skills such as how to set up and operate machinery, read blue prints, enter and interpret data correctly, read and understand instructions, and make even simple decisions.

The Legislature appropriates funds thinking districts will spend these extra funds on those students who are truly "At Risk", yet the funds are seldom spent to help specific Middle School and High School students who are on the verge of dropping out or to bring back those who already have.

Most students who get a "Diploma" have no employable skills. So, some "drift" aimlessly for years trying to find their way. They may turn to drugs, gangs, burglary, prostitution and identity theft to "earn money", live off of their parents or find a way for taxpayer funded Welfare programs to pay their bills.

It is finally time for the Kansas Legislature to redefine the term "At-Risk" to mean students who are at least one year behind in Reading and/or Math or have been cutting classes or not attending school for one month or more. Districts must also be allowed to teach students practical, basic skills to survive in a modern society and still "Graduate". Insisting that each student MUST pass a "College Bound" curriculum is a major part of the "At Risk" problem. Furthermore, if a District is to receive additional funding for these students who are truly "At Risk" of dropping out, then they must show that they actually spent that money on direct services to these specific students. Throwing millions of dollars at the problem without accountability will have little or no impact.

Keeping the current "At-Risk" definition as only kids whose parents have lost their job or have not found full employment wastes millions of tax dollars and gives a false sense that something is being done to help all kids learn and graduate with skills which employers actually need. Amending the definition as suggested above will spend our tax dollars wisely and make needed changes in how and what each student learns.
