

MINUTES OF THE SENATE WAYS AND MEANS COMMITTEE

The meeting was called to order by Chairperson Carolyn McGinn at 10:30a.m. on February 4, 2011, in Room 548-S of the Capitol.

Senator Vratil, excused

Committee staff present:

Jill Wolters, Office of the Revisor of Statutes
Daniel Yoza, Office of the Revisor of Statutes
David Wiese, Office of the Revisor of Statutes
Alan Conroy, Director, Legislative Research Department
J. G. Scott, Chief Fiscal Analyst, Legislative Research Department
Aaron Klaassen, Senior Fiscal Analyst, Legislative Research Department
Dorothy Hughes, Fiscal Analyst, Legislative Research Department
Brea Short, Intern, Senator McGinn's Office
Jan Lunn, Committee Assistant
Josh Lewis, Chief of Staff

Conferees appearing before the Committee:

Alan Conroy, Director, Legislative Research Department
Dr. Andy Tompkins, President and CEO, Kansas Board of Regents
John Dieker, Vice President, Bombardier Learjet, speaking on behalf of the National Institute for Aviation Research and the National Center for Aviation Training

Others attending:

See attached list.

Bill Introductions

Senator Umbarger moved to introduce a bill related to highway signage (#rs0544); Senator Teichman seconded the motion, which carried on a voice vote.

Senator Umbarger moved to introduce a bill related to the issuance of certificates of title for vessels (#rs0726); Senator Schmidt seconded the motion, which carried on a voice vote.

Senator Umbarger moved to introduce a bill concerning rail service improvement loans and grants (#rs0734); Senator Huntington seconded the motion, which passed on a voice vote.

Senator Umbarger moved to introduce a bill concerning repeal of K.S.A. 75-5002 and 75-5003 relating to the highway advisory committee (#rs0733); Senator Teichman seconded the motion, which carried on a voice vote.

Senator Huntington moved to introduce a bill increasing fees for the barbering board (#rs0039); Senator Teichman seconded the motion, which passed on a voice vote.

Senator Schmidt moved to introduce a bill (#rs0644) concerning unclaimed property and disclosure of tax information to the state treasurer; Senator Francisco seconded the motion, which passed on a voice vote.

Follow-Up Response

Senator McGinn noted that a response from Scott Frank, Legislative Auditor from the Division of Legislative Post Audit, was included in committee members' packets. He responded to numerous questions related to his presentation that was heard in the Senate Ways and Means Committee meeting on January 26, 2011. Mr. Frank's response is attached (Attachment 1), and considered part of this permanent record.

Preliminary General Fund Receipt Estimates

Alan Conroy, Director of the Legislative Research Department, was present to discuss the preliminary general fund receipt estimates. He noted that due to the closing of the State for the recent snow emergency, there has been a delay in closing out the January 2011 receipt report. Mr. Conroy reported that in January, preliminary figures indicate total State General Fund taxes increased 5.1% over projections. In terms of fiscal year-to-date through January, a modest

Unless specifically noted, the individual remarks recorded herein have not been transcribed verbatim. Individual remarks as reported herein have not been submitted to the individuals appearing before the committee for editing or corrections. 1

CONTINUATION SHEET
MINUTES OF THE WAYS AND MEANS COMMITTEE on February 4, 2011, 10:30 a.m. 548-S

economic gain has been realized of 0.2% over projected estimates (Attachment 2).

Dr. Andy Tompkins, President and CEO of the Kansas Board of Regents, was present to discuss the vision for higher education in Kansas (Attachment 3). He indicated the board has spent the past two years studying the needs of the Kansas economy, the trends in higher education, and the research on the future of higher education. As a result of this work, the Board approved a ten-year strategic agenda for Kansas higher education. He reviewed the six goals for the higher education system and the metrics that will be used to evaluate and assess achievement.

Responding to Committee members' questions, Dr. Tompkins indicated that:

- Progress is being made in program development that will assist experienced individuals in the workplace to go back to college to either complete a degree program or bridge into another career path such as teaching (alternative certification).
- The national standard for graduation or completion rates for a 4-year program is 33-34 percent, and the national standard for a 6-year program is 52-60 percent. He indicated the current trend reflects more time is being taken for full-time students to complete a 4-year program.
- Senator Kelly requested information, by university, related to how many students are retained. Dr. Tompkins indicated that information would be furnished at a later date. Not only is the persistence rate by university available but also information related to retention rates within the system.
- State universities in Kansas follow qualified admissions criteria when admitting undergraduate students. This ensures Kansas resident students meet certain admission criteria which enhance success at the university level.
- One strategic goal is to enhance alignment between the higher education system and the needs of the Kansas economy. In 2010, the Kansas Board of Regents met with business and industry leaders to assess workforce needs and identify gaps. Most universities routinely meet with advisory committees and undergo a program review process at determined intervals to ensure programs are aligned with identified needs. Information related to workforce resources and available jobs is communicated through job fairs and interaction with various businesses.

National Center for Aviation Training (NCAT) and National Institute for Aviation Research (NIAR)

John Dieker, Vice President of Bombardier Learjet, speaking on behalf of the National Institute for Aviation Research and the National Center for Aviation Training (Attachment 4), was present to discuss the aviation industry and to present the Senate Ways and Means Committee with annual reports from NCAT and NIAR, respectively (Attachments 5 and 6).

Mr. Dieker discussed with committee members the historical trend for aircraft production from 1970 through 2010. The Honeywell business jet forecast, the civil jet transport market, business jet market, and the economic impact of the aviation industry in Kansas were also reviewed. He emphasized global competition and methods to sustain Kansas' competitive advantage. Mr. Dieker reported on research funding through NIAR which leverages federal and industry funding in Kansas. NCAT programs launched or planned for launch in 2011 were reviewed. Mr. Dieker described success factors in growing the Kansas economy.

Mr. Dieker responded to questions from Committee members as follows:

- Aviation is a globally competitive industry. Some U.S. companies have manufacturing sites in other countries.
- During the economic downturn, business was impacted negatively. Production line rates dropped 40 percent, and experienced employees were laid off. Currently, the industry is in a growth position and in 2011, it is anticipated approximately 200-300 employees could be hired back. Employees laid off during the economic downturn will have recall rights.
- The knowledge and innovation seen in the aviation industry is integral in maintaining competitive advantage in Kansas.

The meeting was adjourned at 11:36 a.m.

MEMORANDUM

Legislative Division of Post Audit
US Bank Building, 800 SW Jackson, Suite 1200
Topeka, KS 66612-2212
voice: 785.296.3792
fax: 785.296.4482
email: lpa@lpa.ks.gov
web: www.kslegislature.org/postaudit

TO: Members, Senate Ways and Means Committee
FROM: Scott Frank, Legislative Post Auditor
DATE: February 3, 2011
SUBJECT: Follow Up on January 26 Testimony

This is in response to a number of questions that members asked during my testimony last week that required some additional research on my part. I have summarized the questions and answers below, and have attached sections from our annual follow-up reports that provide additional information.

1. What impact did the audit of business procurement cards have on the frequency with which agencies' use those cards for purchases?

According to officials from the 10 agencies we reviewed as part of the audit, each agency adopted policies and procedures to increase the use of procurement cards. Some saw a significant increase in use (e.g., procurement card purchases at the University of Kansas more than doubled, from \$8 million in FY 2009 to \$20 million in FY 2010). In addition, the Division of Accounts and Reports increased agencies' share of any cash-back rebates, from 50 percent to 75 percent, making procurement card purchases more advantageous to agencies. (*See Attachment A*)

2. Is the \$272,758 in savings the State Conservation Commission has already realized included in, or in addition to, the \$710,000 in potential savings cited in the agricultural-related agencies audit?

The savings realized as a result of actions taken by the State Conservation Commission are included in the \$710,000 in potential savings cited in the audit. This leaves an estimated \$438,000 in other potential savings possible through consolidation. (*See Attachment B*)

3. What is included in the \$295,000 of non-consolidation savings that were identified in the financial regulatory agencies audit?

The audit report cited a total of \$555,600 in potential annual savings. Of that, \$262,000 would come from consolidating the three financial regulatory agencies—the Department of Credit Unions, the Office of the Bank Commissioner, and the Office of the Securities Administrator. The remaining \$295,000 a year would come from other operating efficiencies, including reducing the number of examinations to the statutory requirement (\$107,000), allowing examiners to work from home to reduce space and travel costs (\$106,000), and stricter adherence to State space standards (\$80,000). According to information provided by agency officials, some of these recommendations have now been implemented. (*see Attachment C*)

I hope this sufficiently answers the Committee's questions. Please let me know if you have any other questions, or if there is anything else I can do for you.

Business Procurement Cards: Expanding Their Use To Increase Cash Rebates to the State (March 2009) Contact: Scott Frank

Summary of the audit: For fiscal year 2008, we estimated that \$27 million of the non-procurement-card purchases agencies made from the 37 highest-volume vendors potentially could have been charged to a procurement card. Charging all those purchases would have generated more than \$380,000 in cash-back rebates. Agencies also made \$327 million of similar non-procurement-card purchases from the thousands of other vendors we didn't analyze. If just 20% of these purchases could have been charged, agencies would have generated \$940,000 in additional cash-back rebates, for a total of \$1.3 million. Among other things, agency officials told us they didn't always use their procurement cards when they could because of concerns about the complexity of tracking such purchases, and the perceived lack of thorough controls over procurement card purchases.

What We Recommended	What the Agency Says It Did	Recommendation Status
1. To help ensure that agencies use the business procurement card program to the maximum extent feasible to generate cash-back rebates, the Division of Accounts and Reports should do the following:		
a. Compile, maintain, and disseminate to State agencies a list of vendors that accept the State's procurement cards	Department of Administration: Department officials reported that individual Statewide open-end contracts, issued by the Division of Purchases for use by State agencies, specifically note whether P-Cards are accepted.	Implemented
b. Continue to actively promote the procurement card program, through such things as newsletters, e-mailings, and relevant user groups such as ASTRA.	Officials said that the implementation of the Statewide Management, Accounting and Reporting Tool (SMART) will make using the card easier, and thus a more attractive option. Officials said that after SMART went live on July 1, 2010, they planned to institute a BPC conference.	Implemented
c. Encourage agencies to pay procurement card bills quickly so the State can obtain the higher rebate rate it has negotiated under the contract with UMB Bank. The Division should also take whatever steps are necessary to ensure that these payments are processed as quickly as possible through the State's accounting system.	Department officials report that at least one agency has taken advantage of early payment terms. They anticipate that the electronic reconciliation feature of SMART will allow additional agencies to take advantage of early payment terms.	Implemented
2. To help ensure that agencies receive the maximum amount of the cash rebates they generate through their procurement charge cards, the	The Department of Administration reviewed its costs and as a result the percentage of the cash rebates shared with agencies was increased from 50	Implemented

What We Recommended	What the Agency Says It Did	Recommendation Status
<p>Division should periodically review its cost of running the procurement card program and adjust the share of the rebates it keeps to stay in line with those costs.</p> <p>3. To help ensure that they maximize their procurement card rebates, the 10 State agencies we identified in this report should review their policies and procedures regarding the use of procurement cards, and should explore ways for making significantly more of their purchases with procurement cards.</p>	<p>percent to 75 percent, for calendar year 2009. Officials said they will continue to review the administrative costs in the future to maximize agency rebate revenues.</p> <p>All 10 State agencies have implemented policies and procedures to increase the use of the Business Procurement Cards. As a result, some of these organizations have seen significant increases in BPC use. For example, the University of Kansas reports BPC use has more than doubled, from \$8 million in FY 2009 to more than \$20 million in FY 2010.</p>	<p>Implemented</p>

FOLLOW-UP REPORT:

Adoption of Calendar Year 2009 Audit Recommendations

 Legislative Post Audit Committee and the Legislative Division of Post Audit
 September 2010

Agricultural-Related Agencies: A K-GOAL Audit Determining Whether Cost Savings Could Be Achieved By Making the Animal Health Department and the Conservation Commission Part of the Department of Agriculture (December 2008) Contact: Joe Lawhon

Summary of the audit: Kansas is one of six states that doesn't place any of its animal health oversight or conservation grant functions within its Department of Agriculture. The remaining 44 states have varying degrees of those functions placed under their Department of Agriculture. Kansas could save about \$710,000 a year by merging the two agencies with the Department of Agriculture. About \$630,000 of the savings comes from eliminating or restructuring staff positions, while about \$80,000 comes from other operating cost reductions. Although agency officials expressed concerns about restructuring, we found those issues could be overcome. During this audit, we identified other issues regarding the operations of the Animal Health Department and the Conservation Commission. For example, the Animal Health Department hasn't fully developed and implemented policy manuals and criteria for assessing the results of inspections—these items were recommended in a previous audit issued in 2002. Other issues related to the efficient use of staff and technology need to be studied by management at both agencies.

What We Recommended	What the Agency Says It Did	Recommendation Status
For the Executive Branch: To help ensure efficient and effective operations, the Animal Health Department should:		
<ul style="list-style-type: none"> formalize all verbal agreements with the U.S. Department of Agriculture by entering into written agreements that outline each party's duties and responsibilities concerning animal disease control inspections and any other pertinent matters. 	Animal Health officials reported the federal Kansas Area Veterinarian in Charge previously indicated he would not sign a document that binds the federal government staff to a particular staffing arrangement, in part because the federal staff may be called to emergency work in another state.	Not implemented Animal Health officials said they would pursue this avenue again, and may propose a memorandum of understanding that recognizes that USDA may need to sometimes suspend the agreement
<ul style="list-style-type: none"> develop written policy manuals describing the processes and actions that all of the Department's inspectors should take. 	Officials reported that animal facility inspectors have a policy manual. However, livestock inspectors, brand inspectors, and brand investigators still do not have manuals.	Not implemented
<ul style="list-style-type: none"> develop guidance and criteria for determining whether a facility passes or fails an inspection. Separate guidance will need to be developed for each of the agency's programs. 	Officials reported that, for the Animal Disease Control Program, they have found it difficult to develop a written document that will fit all operations they inspect.	Not implemented
<ul style="list-style-type: none"> Develop a written plan that would implement a risk-based inspection model for the Companion Animal Facility Inspection program. 	Officials reported that they have such a plan that has been in use for several years, and has been used in the budgeting process to request additional inspectors.	Implemented However, during the audit, we thought the agency didn't have enough data to know how many additional inspectors are needed.

FOLLOW-UP REPORT:

*Adoption of Calendar Year 2008 Audit Recommendations
Legislative Post Audit Committee and the Legislative Division of Post Audit
August 2009*

What We Recommended	What the Agency Says It Did	Recommendation Status
<ul style="list-style-type: none"> evaluate the benefits of moving from an annual licensing process to a multi-year licensing process. 	<p>Officials said they register brands for a five-year period, but they think multi-year licensing in other areas would create a financial hardship on producers, and would meet with great resistance.</p>	<p>Not implemented</p>
<ul style="list-style-type: none"> evaluate the benefits of computerizing various processes, such as inspection reporting, licensing, and permitting. By moving from a paper-oriented process to one that makes use of modern technology, it is likely that many hours of staff time could be freed up. 	<p>Officials reported they are working toward more computer-based processes as funding allows. They cited lack of funding and resistance by some veterinarians and livestock producers as obstacles to full adoption of electronic processes. Department of Agriculture officials have said they will help the Animal Health Department use the information technology services they have adopted for their licensing and permitting programs. They have provided Animal Health officials with a preliminary list of equipment and funding needed for using electronic inspection forms.</p>	<p>Not implemented</p>
<ul style="list-style-type: none"> compare, as its office lease agreement expires, the amount of office space the agency has been renting to the Department of Administration's recommended space standards. The agency should either make the necessary adjustments to meet the standard or seek an exemption from the Department of Administration. <p>To help ensure efficient and effective operations, the Conservation Commission should:</p>	<p>Officials reported that, by their calculations, they have only a small amount of excess space. They said they will pursue an exemption from the Department of Administration.</p>	<p>Implementation planned</p>
<ul style="list-style-type: none"> evaluate the benefits of computerizing various processes, such as inspection reporting, grants application, licensing, and permitting. By moving from a paper-oriented process to one that makes use of modern technology, it is likely that many hours of staff time could be freed up. 	<p>Officials reported that the transition to paperless processes started in fiscal year 2004. The Department said that, since implementation, the new system has contributed to a savings of \$250,000, as well as significant increases in efficiency.</p>	<p>Partially implemented Officials said they recently re-evaluated the potential for further automation, beyond what's in place now, and determined there wasn't a positive cost benefit to doing so.</p>
<ul style="list-style-type: none"> evaluate the merits of shifting all or portions of certain duties, such as inspections, grant application review, and possibly others, to local conservation districts. 	<p>Officials don't think moving duties to local conservation districts is a good option, citing small staff sizes and varying levels of technical knowledge in the local districts.</p>	<p>Not implemented</p>

What We Recommended	What the Agency Says It Did	Recommendation Status
<ul style="list-style-type: none"> compare, as its office lease agreement expires, the amount of office space the agency has been renting to the Department of Administration's recommended space standards. The agency should either make the necessary adjustments to meet the standard or seek an exemption from the Department of Administration. <p>For the Legislature: To help achieve goals of reducing operating costs and increasing administrative efficiencies, the Legislature should merge the Conservation Commission and the Animal Health Department with the Department of Agriculture. When considering how a merger can best be accomplished, the Legislature will need to clarify the roles and powers of the agencies' advisory boards, ensure that fees generated by one industry don't subsidize another, and determine whether powers presently given to the Livestock Commissioner and the Executive Director of the Conservation Commission would transfer to the Secretary of Agriculture, or whether those powers should be given to the heads of these divisions.</p>	<p>Commission officials said they intend, when their lease is up, to make the necessary adjustments to meet the Department of Administration space standards, or to seek an exemption.</p> <p>In 2009, the Legislative Post Audit Committee introduced Senate Bill 231, which would abolish the Animal Health Department and State Conservation Commission, and place the powers and duties of those agencies within the Department of Agriculture. The Senate Agriculture Committee held hearings on the bill, but no further action was taken.</p> <p>The Conservation Commission reorganized internally as an alternative to consolidation:</p> <ul style="list-style-type: none"> The Commission dissolved an agreement with USDA's Natural Resources Conservation Service, and terminated the three full-time temporary staff assigned to the program as of June 13, 2009. The Commission eliminated one clerical position, effective June 13, 2009, and redirected that person's duties to other Commission staff. 	<p>Implementation planned</p> <p>Partially implemented Although the agencies weren't consolidated, the Conservation Commission's actions accomplished many of the cost savings that would have been achieved by consolidation. Officials reported that the fiscal year 2010 savings total almost \$273,000.</p>

Financial Regulatory Agencies: Determining Whether Functions Could Be Combined To Gain Cost Efficiencies

(September 2008) Contact: Katrin Osterhaus

Summary of the audit: Kansas is one of only five states with three or more separate agencies that oversee financial entities and institutions. By consolidating Kansas' Department of Credit Unions, Office of the Bank Commissioner, and Office of the Securities Commissioner, at least \$260,000 could be saved annually, mostly from staff reductions or restructurings. However, several issues related to governance and operation of a consolidated agency would need to be addressed. An additional estimated \$295,000 in annual savings could be achieved even if the agencies aren't consolidated. Those savings come from reducing credit union examinations to the minimum number required by law, allowing bank examiners to work from home, and reducing the amount of office space the agencies rent to the standards established by the Department of Administration. Total estimated cost savings of \$2.8 million over five years are conservative. Savings could be significantly higher after a detailed review and restructuring of examination schedules.

What We Recommended	What the Agency Says It Did	Recommendation Status
<p>For the Legislature: To help achieve the goals of combining the three agencies with similar missions and functions, reducing operating costs, and increasing administrative efficiencies, the Legislature should consolidate the regulation of banks and credit unions under a single financial-regulatory agency. The Legislature should consider consolidating the regulation of securities under the same financial-regulatory agency.</p>	<p>The Legislative Post Audit Committee introduced Senate Bill 230, which would consolidate the Bank Commissioner's Office, Credit Union Department, and Securities Commissioner's Office into a new Department of Financial Institutions. The bill would create 3 divisions within the new Department: the Division of Banks and Credit Unions, the Division of Securities, and the Division of Consumer and Mortgage Lending. The State Banking Board and Credit Union Council would be continued with the same duties and powers they currently have.</p>	<p>Not Implemented The bill was referred to the Senate Financial Institutions and Insurance Committee, but no action was taken.</p>
<p>For the Executive Branch: If the agencies are consolidated, management should conduct a comprehensive review of the exam sites to be visited with a goal of reducing the overall distance individual examiners have to travel.</p>	<p>The Office of the Bank Commissioner is reviewing the number of banks in each region to see if there's a need to adjust regional boundaries. The Office bought mapping software to calculate mileage between regional offices and banks, to help regional managers determine whether the exam teams should commute from their duty station or stay out overnight. Office officials have reviewed travel and vehicle-use policies with the regional managers to ensure they are making the lowest-cost travel choices. The Department of Credit Unions says it has instructed examiners to pool travel, and to only visit credit unions when necessary.</p>	<p>Partially implemented Although the Legislature didn't consolidate the agencies, the Office of the Bank Commissioner and Department of Credit Unions reported steps to reduce travel. The Securities Commissioner reported no actions to review or reduce travel.</p>

FOLLOW-UP REPORT:

Adoption of Calendar Year 2008 Audit Recommendations
Legislative Post Audit Committee and the Legislative Division of Post Audit
August 2009

What We Recommended	What the Agency Says It Did	Recommendation Status
To help achieve significant operational efficiencies, <u>whether or not</u> a decision is made to consolidate regulatory functions under a single agency, the Office of the Bank Commissioner should restructure its examination function to close its regional offices, and examiners could work from their homes.	Officials said they are considering the cost of closing the regional offices and having examiners work from home, but they cite concerns about: <ul style="list-style-type: none"> • security of confidential bank and consumer information • the collaborative nature of bank examinations if the teams of examiners don't have a central work location. 	Not Implemented
The Department of Credit Unions should do the following: <ul style="list-style-type: none"> • reduce the frequency of its examinations of credit unions with good CAMEL ratings to once every 18 months, as currently required by Kansas law. That requirement is the same as the requirement for Kansas banks. 	Officials said that it is unsafe and unsound to reduce the frequency of examinations at this time, both because of economic conditions, and because the National Credit Union Administration is requiring credit unions to recapitalize the National Credit Union Share Insurance Fund.	Not implemented
<ul style="list-style-type: none"> • revise its policy to visit branch offices only on an "as needed" basis. 	Officials said that examiners now visit branches less frequently as a result of the recommendation, but that some branch visits continue to be necessary to review records, check signage, and interview personnel.	Implemented
<ul style="list-style-type: none"> • eliminate unnecessary travel. 	Officials reported that they have instructed financial examiners to reduce travel by sharing vehicles, and by using the phone and e-mail instead of face-to-face contact when feasible.	Implemented
To ensure the Office of Bank Commissioner complies with K.S.A. 9-1707, officials should ensure that bank and trust examinations are examined once every 18 months.	Officials said they are tracking the schedule of examinations, but they can't do much to ensure that the federal examiners do their examinations on time.	Implemented
If the three agencies' rented space exceeds the State's office space standards, they should make the necessary adjustments or seek an exemption.	The Office of Bank Commissioner says it is within the space standards. The Office of Securities Commissioner currently is reducing its space by about 2,000 square feet. The Credit Union Department said it would take the recommendation into consideration when its lease expires in 2010.	Implementation planned
The Department of Credit Unions and the Office of the Securities Commissioner should ensure that they reimburse staff at the lesser of either rental car costs or private vehicle reimbursement rates.	Officials from both agencies reported that they have established procedures to ensure that the regulation is followed.	Implemented

February 8, 2011

To: Legislative Budget Committee

STATE GENERAL FUND (SGF) RECEIPTS July through January, FY 2011

This is the third month of experience under the revised estimate of SGF receipts in FY 2011 made by the Consensus Estimating Group on November 2, 2010. The figures in both the "Estimate" and "Actual" columns under FY 2011 on the following table include actual amounts received in July-October. That means that this report deals mainly with the difference between estimated and actual receipts in November through January.

Total receipts through January of FY 2011 were \$6,000 or less than 0.1 percent above the estimate. The component of SGF receipts from taxes only was \$8.2 million or 0.2 percent above the estimate. Total SGF taxes only, at the end of December, were \$18.7 million or 0.7 percent below the estimate. Total receipts at the end of December were \$28.6 million or 1.0 percent below the estimate.

Tax sources that **exceeded** the estimate by more than \$1.0 million were individual income (\$33.2 million or 2.2 percent), compensating use (\$3.8 million or 2.3 percent), insurance premiums \$3.3 million or 6.6 percent), and corporation franchise (\$1.7 million or 26.4 percent). Of particular note is that individual income tax quarterly estimated payments for this most recent quarter paid in January were 8.0 percent above the same quarter from last year. This is the first January quarterly payment that increased since 2008. Another positive sign was individual income tax withholding payments increased 10.9 percent compared to the same period last year.

The tax sources that **fell below** the estimate by more than \$1.0 million were corporation income (\$22.2 million or 15.0 percent), retail sales (\$5.7 million or 0.5 percent), cigarette (\$2.0 million or 3.4 percent), financial institutions (\$1.3 million or 13.2 percent), and severance (\$1.1 million or 2.2 percent).

Interest earnings exceeded the estimate by \$1.9 million. Net transfers were \$8.0 million less than expected, and agency earnings were \$2.1 million less than expected

Total SGF receipts through January of FY 2011 were \$412.4 million or 13.9 percent above FY 2010 receipts for the same period. Tax receipts only for the same period were above FY 2010 by \$325.6 million or 11.0 percent. Remember that the FY 2011 receipts include the retail sales tax rate increase authorized by the 2010 Legislature.

This report excludes a deposit to the SGF of \$700 million, pursuant to issuance of a Certificate of Indebtedness. This certificate will be discharged prior to the end of the fiscal year.

KANSAS BOARD OF REGENTS

SENATE COMMITTEE ON WAYS AND MEANS

February 4, 2011

Goals for Higher Education

Dr. Andy Tompkins, President & CEO

Madam Chair and members of the Committee, it is my pleasure to be with you today. As you may know, I became President and CEO of the Kansas Board of Regents last June following Reginald Robinson who had served with distinction in that position for over seven years. My background in higher education is as an associate professor of educational leadership, a department chair, and a college dean. Prior to serving in higher education, I was a high school English teacher, a high school principal, a school district superintendent, and Commissioner of Education in Kansas.

Part of my charge today is to briefly explain our vision for higher education in Kansas. The Kansas Board of Regents has spent the last two years studying the needs of the Kansas economy, the trends in higher education both in Kansas and throughout the United States, and the research on the future of higher education. As a result of this work, the Board approved in September of last year a ten year strategic agenda for higher education which we call *Foresight 2020*.

Foresight 2020 includes six goals for the higher education system and a set of metrics that will be used to gauge the progress that is being made on these goals. A copy of the approved plan is attached. The goals are as follows:

- ★ Achieve alignment between the state's preK-12 and higher education systems and continue to enhance alignment between higher education institutions.
- ★ Achieve participation in the state's higher education system that better reflects the state's demography and more fully engages adult learners.
- ★ Achieve measurable improvement in persistence and completion rates for higher education institutions.
- ★ Ensure that students earning credentials and degrees possess the foundational skills essential for success in work and in life.
- ★ Enhance alignment between the work of the state's higher education system and the needs of the Kansas economy.
- ★ Enhance the regional and national reputation of Kansas universities through aspirational initiatives.

The Board believes that achievement of these goals is critical to the future success of higher education in Kansas in meeting the needs of the Kansas workforce and providing a highly educated citizenry.

★ LEADING HIGHER EDUCATION ★

Senate Ways and Means

FORESIGHT 2020

A STRATEGIC AGENDA FOR KANSAS HIGHER EDUCATION

Approved by the Kansas Board of Regents
September 15, 2010

A STRATEGIC AGENDA FOR KANSAS HIGHER EDUCATION

In the spring of 2009, Reginald Robinson, President and CEO of the Board of Regents, presented five strategic questions and associated data related to issues that would directly affect the future of higher education in Kansas. After more than a year of study, Foresight 2020 emerged as a new strategic agenda for higher education in Kansas. Five strategic goals, initially characterized as “pillars”, form the foundation for this agenda.

Specific objectives were then developed to serve as the initial focus for each goal. In some instances specific dates were identified for achievement of the objectives and in other instances long term objectives were established. As certain objectives are accomplished and new data gives greater focus to achievement of the goals, additional and/or revised objectives will be proposed.

This strategic agenda and its associated objectives will now be used as the focus of performance agreements with each of the state’s public higher education institutions. Also, it will serve as the framework for creating a systematic monitoring of progress that will result in an annual report to the Board of Regents on these strategic goals.

Strategic Goal #1

Achieve alignment between the state’s preK-12 and higher education systems and continue to enhance alignment between higher education institutions.

Objectives

- 1.1 By December of 2010, the Board of Regents and its staff in cooperation with the P-20 Education Council and the Kansas State Department of Education will identify gaps that currently exist between preK-12 completion and higher education preparation expectations.
- 1.2 By August of 2011, all higher education institutions will have had discussions with local preK-12 partner high schools regarding these gaps and a plan to eliminate them.
- 1.3 By June of 2011, the Board of Regents will adopt a revised set of university admissions standards designed to identify a level of high school preparation that significantly enhance student success at the state’s higher education institutions.
- 1.4 During the 2010-11 academic year, the Board will create a task force to review progress on alignment of higher education institutions and charge the task force with developing recommendations for additional enhancements needed to ensure greater alignment.

Strategic Goal #2

Achieve participation in the state’s higher education system that better reflects the state’s demography and more fully engages adult learners.

Objectives

- 2.1 By 2020 or before, Kansas will improve levels of participation, within each higher education institution and across the system, that reflect the racial, ethnic, and economic demography of the

state with a special focus on the most underrepresented students as measured by biannual progress on the baseline year of 2010.

- 2.2 By 2020 or before, Kansas will achieve “first in the nation” state status for in-state postsecondary participation among “traditional” students, which currently would require an increase from the current participation rate of 53 percent - which is third in the nation – to approximately 59 percent.
- 2.3 By 2020 or before, Kansas will achieve “top five” state status for participation of adults between the ages of 25-39 with only a high school diploma, which currently will require an increase from the current participation rate of 238 per 1000 - which is above the national average – to approximately 317 per 1000.
- 2.4 By 2020 or before, Kansas will achieve “top five” state status for participation of adults between the ages of 40-64 with only a high school diploma, which currently will require an increase from the current participation rate of 48 per 1000 - which is above the national average - to approximately 103 per 1000.
- 2.5 By 2020 or before, Kansas will achieve the national average for enrollment of those with less than a high school diploma in the state-administered Adult Basic Education (ABE) programs with an immediate goal of removing waiting lists, which will require an increase from the current enrollment of 55 per 1000 to approximately 101 per 1000.
- 2.6 By 2020 or before, Kansas will achieve the national average for enrollment of those with limited or no English language proficiency in English as a Second Language (ESL) programs, which will require an increase from 83.3 per 1000 to approximately 101 per 1000.
- 2.7 By 2020 or before, Kansas will double the percentage of Kansas ABE participants who achieve the goal of continuing on to postsecondary education after completion of their ABE programs, which will require an increase from 14 percent to 28 percent.
- 2.8 By January of 2011, the Board of Regents will develop and submit for legislative consideration a proposal that would authorize new state funding to provide need-based assistance to students at public universities.
- 2.9 By September of 2012, the Board of Regents, in cooperation with state university leaders, will develop an initiative aimed at bringing additional out-of-state students into Kansas to pursue their postsecondary studies.
- 2.10 By January of 2012, the Board of Regents will develop and submit for legislative consideration a proposal that would authorize new state funding to expand the state’s Comprehensive Grant Program to provide need-based student assistance for two-year, certificate, and part-time students with an initial focus on those students who pursue studies that lead to jobs in high demand areas of the state’s economy.
- 2.11 By the summer of 2012, Regents’ institutions will have an approved plan to meet the Regent’s policy on distance education which includes the use of alternative delivery systems to accommodate the variety of student educational needs.

Strategic Goal #3

Achieve measurable improvement in persistence and completion rates for higher education institutions across the state.

Objectives

- 3.1 By September of 2012, the Board of Regents, in cooperation with higher education institutional leaders, will develop an initiative aimed at identifying and recruiting back into the higher education system working adults who have earned substantial credit but have not finished the work necessary to earn a credential or degree.
- 3.2 By 2020 or before, Kansas will achieve a 10 percentage point increase in first-to-second year retention rates across the higher education system.
- 3.3 By 2020 or before, Kansas will achieve a 10 percentage point increase in the six-year graduation rate for public universities and the three-year graduation rate for community and technical colleges.
- 3.4 By 2020 or before, Kansas will achieve "top 10" state status for the percentage of students who have earned an associate degree or higher, which currently will require an increase from 39.2 percent to approximately 43.4 percent.

Strategic Goal #4

Ensure that students earning credentials and degrees across the higher education system possess the foundational skills essential for success in work and in life.

Objectives

- 4.1 During the 2010-11 academic year, the Board of Regents' system-wide learner outcomes task force, in consultation with the university Chief Academic Officers, shall make recommendations regarding the identification and measurement of foundational skills (such as oral and written communication, technical and numerical literacy, critical thinking and problem-solving) which institutions will report to the Board.
- 4.2 By June of 2011, the Board of Regents will adopt a framework that enables each institution to report on the measurement of the foundational skills identified as essential to success in work and in life.
- 4.3 By September of 2012, the Board of Regents will receive its first report on the measurement of foundational skills across the higher education system.

Strategic Goal #5

Enhance alignment between the work of the state's higher education system and the needs of the Kansas economy.

Objectives

- 5.1 By December of 2011, the Board will begin receiving an annual report on the workforce needs of the state and the number of persons educated in the higher education system to fill those needs to determine alignment and gaps.
- 5.2 By December of 2012, the Board will begin receiving an annual report on university research initiatives designed to meet the needs of the Kansas economy.
- 5.3 By 2020 or before, Kansas will achieve or exceed the regional average for percentage of credentials or degrees awarded in science, technology, engineering, and mathematics (STEM) fields.

Strategic Goal #6

Enhance the regional and national reputation of Kansas universities through aspirational initiatives.

Objectives

- 6.1 By June of 2011, Regents' universities will identify benchmarks of excellence in comparison with peer institutions and establish goals to pursue in order to increase regional, national, and/or peer rankings.
- 6.2 By June of 2012, Regents' universities, according to mission, will identify areas for expansion of research capacity and/or focus and will establish goals to pursue.
- 6.3 Regents' universities will demonstrate increased collaboration including alignment within the Kansas higher education system through a biennial report.

FY 2010 – 2004	29 - 35

NIAR/Industry/State (NIS) Aviation Research Program

Program Summary – December 2010

The Kansas aviation industry is pleased that the Governor and Kansas Legislature have maintained their focus on economic growth in Kansas. Boeing, Bombardier-Learjet, Cessna Aircraft, Spirit AeroSystems, and Hawker Beechcraft account for a significant portion of the gross domestic product of the state and have a vested interest in initiatives that help maintain and grow their contribution to the state economy. By 2016 it is forecasted that 16.1% of all wages earned in Kansas will be attributable to the aviation industry.

The importance of the existing aviation industry on the Kansas economy is noted below by the following 2009/2010 statistics:

- ~\$7.1B annual economic impact, leading the nation with \$2,561 per capita contribution (twice that of the next most competitive state)
- Industry leading OEM's such as Cessna, Bombardier Learjet, Hawker Beechcraft, Airbus (Engineering) and Boeing (Military)
 - Kansas GA OEM's shipped 1,708 airplanes worth \$5.8B with exports accounting for 537 airplanes or \$2.3B (40%)
- Kansas aviation companies deliver over 50% of all GA aircraft employing 17.8% of all Kansas manufacturing employees
 - Aerospace products and parts employment represents 19.8% of all Kansas manufacturing employees.
- Each Kansas taxpayer saves \$525 in taxes paid in Kansas as a result of the aviation industry
- Each aviation job generates an additional 3.7 jobs

Today, the aviation industry must compete in a global economic environment far different from that of the past. New challenges to our leadership are arising from aircraft manufacturers in Europe, the Pacific Rim, and Brazil. For example, the commercial airplane industry must now compete against the European union (13 countries). Furthermore, new foreign government-supported research and test facilities, particularly in Europe, are attracting business from United States aircraft companies because of availability, quality of results, rapid response and low cost.

To address this competition, the nation's research and development base in aircraft design and manufacturing must be expanded in partnership with the aviation industry and state governments. It is through research and the application of new technology in aerodynamics, materials, structures, sensors, and safety that the U.S. will be able to maintain its leading position in aviation in the 21st century.

The NIAR/Industry/State (NIS) program was created in FY 2003 to aid the aerospace industry in Kansas and enable technology that allows the Kansas aviation industry to compete in a global economic environment. The program was funded by the State Legislature as a result of an industry campaign. It is executed by industrial representatives through an executive committee comprised of representatives from Boeing, Bombardier-Learjet, Cessna, Hawker Beechcraft and Spirit AeroSystems. WSU representatives on the executive committee consist of J. David McDonald (Assoc. Provost for Research) and John Tomblin (National Institute for Aviation Research) who collectively serve in an

advisory role for the industry executive committee with respect to university policies and procedures.

Each program year the industry's most pressing problems are identified by industry representatives on the executive committee, and are matched to existing expertise within NIAR. Each project is conducted with a fixed budget, definite deliverables, and a one-year schedule. The researchers work closely with industry representatives who serve as points of contact and monitor the progress of the research.

The NIS program is structured differently than traditional research program in that the deliverables are more focused towards keeping the Kansas aviation companies competitive by rapid insertion of technology, reduced time-to-market, reduced cost and increased quality and safety. Due to these specific goals, the Principle investigators (PIs) on each project agree to the following:

- (1) Most NIS projects are proprietary in nature and therefore publication opportunities may have to be negotiated with the aviation companies.
- (2) Each project will be assigned a primary industry contact who will develop and monitor the project. Weekly or biweekly meetings with the industry project contacts will be required for each project. The executive committee has also assigned a NIS Liaison to forward briefing information to the executive committee. Regular briefing meetings will be held with the NIS Liaison and it is the responsibility of the principal investigator to brief the liaison, as he/she will represent each project to the executive committee.
- (3) Budgets developed under the NIS program will not be charged University research overhead due to State funding. Routine research expenditures such as release time, summer salary, post docs, graduate/undergraduate students, laboratory fees and materials and supplies will be typical in the budget developed for the project. Limited equipment purchases and travel will be allowed for the project but must be approved by the executive committee and industry monitors and must be directly related to the successful project outcome.
- (4) The industrial executive committee will periodically review each project and reserves the right to discontinue or reduce funding for nonperformance or lack of expenditures. PIs are required to submit monthly expenditure reports on the project.

In 2003, 2004, 2005, and 2006 the Kansas Legislature and the Governor approved \$1M, \$2M, \$2M, and \$2M, respectively, for aviation related research to support future products. In 2007, the Kansas aviation industry requested a second initiative for enhanced funding over a five-year period, which was funded at \$4.75M, \$5M, \$4.9M, and \$4.75M respectively, in 2007, 2008, 2009, and 2010. In 2011, the industry is requesting the fifth year of funding of \$10M to support research and technical support in the areas of:

- Composites and Advanced Materials Applications
- Aircraft Icing
- Environmental Effects on Aircraft Operation
- Advanced Manufacturing Techniques
- Crash Dynamics and Crash Safety
- CAD/CAM Applications and Design
- Advanced Joining

These research projects will help the Kansas aviation industry reduce cycle time-to-market, reduce costs, enhance quality and safety for improved competitiveness, and retain and create jobs. Based upon the report by the Commission on the Future of the United States Aerospace Industry, Wichita was cited as having the largest concentration of aerospace and aviation industry jobs in the nation, accounting for one out of every five jobs. While Boeing, Bombardier-Learjet, Cessna, Hawker Beechcraft and Spirit AeroSystems dominate employment in south central Kansas, there are 1,800 smaller manufacturing shops in the 13-county region surrounding Wichita. Economists estimate that there are 2.9 jobs outside aerospace for every direct job within aerospace.

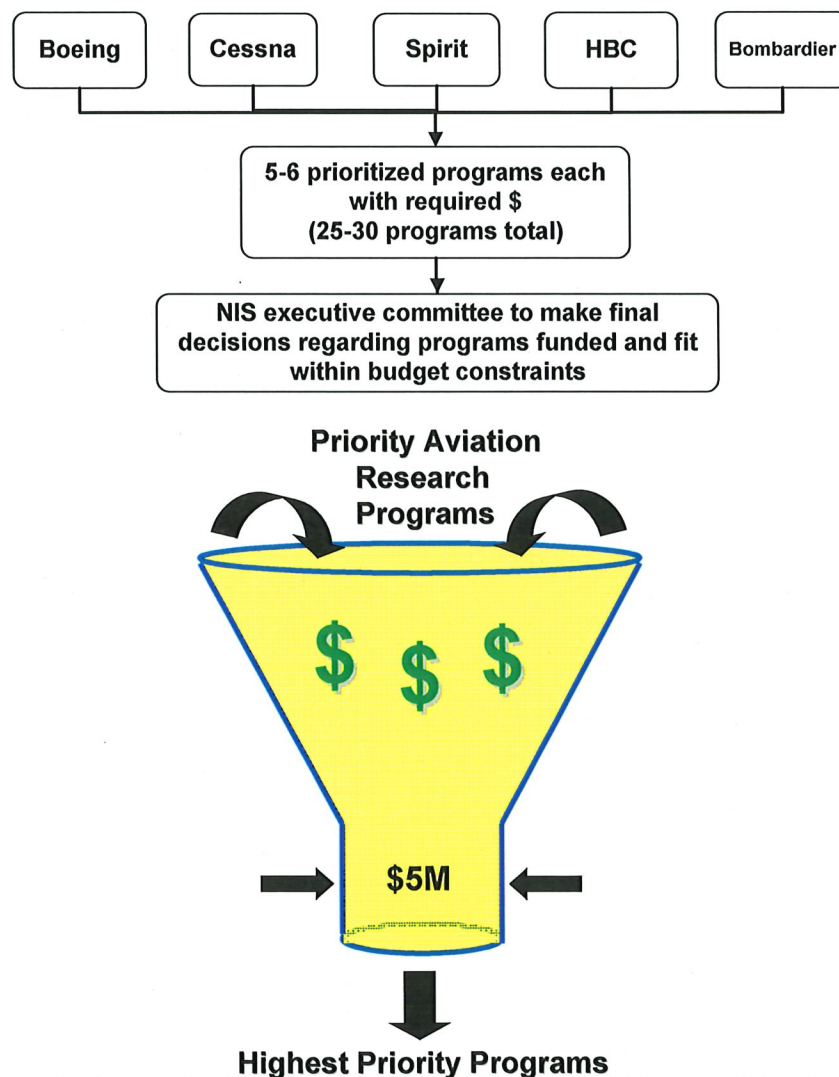

The primary purpose of the program is to transition research directly onto the production floor but it has also been instrumental in attracting federal funding dollars and industry contract dollars into the State. As of the fiscal year end of 2009, this program has generated a 9:1 match with respect to the State dollars invested

Program Protocol Procedures

The protocol which the executive committee follows is based upon each industrial representative presenting 5-6 high priority research project within their company and sharing with the total group. These projects are summarized in a combined list and discussed among the executive committee which projects have overlap and may be combined, which projects bring the highest return on investment (from providing the greatest competitive advantage for the Kansas aviation cluster) and which projects could achieve specific goals in the required time frame. Budgets are also placed with each project. Based upon the funding provided by the State legislature, the project listing is trimmed or rescaled to fit within the NIS budget year as well as the allowable funding. The following figures depict this process.

NIS Funding Protocol

DETAILED PROGRAM REVIEW FOR 2011

The following sections provide a listing of each project funded by the NIS executive committee for program year 2010 along with a brief project description and a listing of the categorized expenditures incurred by each specific project.

A summary listing is provided for NIS funding years of 2004-2010.

Research Topics for 2011

Project	Title	PI	FY 2011 Budgeted Funding
11-002	Repair of Composite Structures (including sandwich)	Salah	\$834,443
11-003	Blind or One-Sided Fastener Usage in Composite Structures (Production and Repair Applications)	Raju	\$150,000
11-019	Quiet Interiors Development	Hoffman	\$189,721
11-011	Adhesive Joint Characterization and Testing	Aldag	\$439,721
11-017	Composite Bearing Allowables Baseline	Seneviratne	\$189,721
11-026	Electromagnetic Characterization of Composite Fuselages	Skinner	\$160,000
11-030	Effects of Manufacturing Defects on Composites Materials (NDI Development)	Aldag	\$289,721
11-031	Engine Inlet Ice Protection System	Papadakis	\$100,000
11-032	Influence of Environmental Knock-down Factors in Composite Design Structural Margins	Tomblin / Seneviratne	\$250,000
11-037	Acoustical impact to composite sandwich structures (dampening, core shear and thermal)	Sharma	\$70,839
11-039	Simulation and modeling of bird strike testing	Olivares	\$132,500
11-040	Large Scale Tooling Prediction for Composite Structures	Minaie	\$250,000
11-042	Thermal Effects of Paint on Composite Structures	Tomblin/Lovingfoss	\$100,000
11-043	Virtual Environment Study (including ECS systems - CATIA to VR)	Toledo	\$200,000
11-044	Legacy Domain and Data Knowledge Preservation	Malzahn	\$125,000
11-045	Ground Deice Fluid Equivalency (Papadakis)	Papadakis	\$200,000
11-046	Fastened Joint B-Basis Allowables	Salah	\$150,000
11-047	Stacked Drilling of Composites and Titanium	Krishnan	\$200,000
11-048	Mechanical and Microstructural Property Evaluation of Joined and Deposited Titanium Structures	Burford	\$200,000
11-049	Damage Growth of Fluid Ingression in Sandwich Panels	Seneviratne	\$239,721
11-050	Laminate Level testing 5330	Seneviratne	\$500,000
11-051	Modeling Direct Effects of Lightning		\$0
N50019	Administration / Liaison		\$25,000
			\$4,996,387

The use of fasteners in aircraft constrained by accessibility to one side of a joint were reviewed with regard to installation processes, hole quality, corrosion, and performance under fatigue loading.

9 | Page

5-11

The turbulent boundary layer (TBL) is the dominant noise source at cruise in modern aircraft. It is necessary to better understand this source of noise to design effective noise control treatments. This project will conduct large scale computational fluid dynamics (CFD) simulations as one means of better understanding this source of noise.

10 | Page 5-12

This investigation addressed defects that could occur in adhesively bonded joints during the manufacture or operation of the joints. Environmental durability of adhesive joints was also tested.

11 | Page 5-12

This project will develop methodology of predicting conservative bearing allowables for new design and the means to combine the bearing capabilities of uni-directional and plain-weave laminates.

12 | Page 5-14

Currently no analytical methods are available for predicting the indirect effects of lightning, therefore extensive and expensive testing is required to show compliance of new designs to FAA requirements. This project will develop a predictive tool correlated with test data to enable the design of robust systems and permit substantial verification with a minimum amount of testing.

13 | Page

5-12

Applications of composite materials in very large, primary structures are becoming commonplace however, defects occurring during the lay-up and cure cycles result in significant rework or worst case, scrap of a part. Understanding the criticality of defect size and density on strength and fatigue properties has the potential to improve manufacturing time and part quality. This project consists of two parts: 1) evaluation and calibration of NDI techniques for determining porosity and 2) understanding the effect of porosity on strength and fatigue properties.

14 | Page 5-16

Safe operation of jet engines in icing conditions requires utilization of ice protection systems (IPS) to prevent the formation of ice accretions that would adversely affect engine performance and aircraft safety. This project will focus on the design, fabrication and testing of light weight, low-power Electro-Expulsive and or hybrid ice protection systems that will keep the inlet lip free or nearly free ($< 1\text{mm}$) of ice.

15 | Page 5-17

A common problem encountered with composites is their sensitivity to environmental conditions such as temperature and moisture. The current practice for the static test article is to account for these environmental enhancement factors in a manner similar to the load enhancement factor approach. This project will document a procedure for applying environmental enhancement and scatter factors to account for the static test condition environment and provide some results for the effects of environment as related to temperature and moisture.

16 | Page *5-18*

Interior noise in the aircraft cabin is contributed by a variety of sources. Use of composite fuselage structures and floor panels reduces overall weight with increased stiffness while the honeycomb sandwich composite panel is known to have higher radiation efficiency and low coincidence frequency. This results in lower sound Transmission Loss (TL) and hence increased noise levels inside the aircraft. By increasing the core stiffness the sound transmission loss can be increased. An effort to research and procure the available damping, insulation and core materials with varying properties will be made during the initial phase of the project.

17 | Page 5-19

Aircraft are susceptible to bird impacts, mostly during takeoff and landing conditions, on forward facing components such as cockpit windshields and wing leading edges. These components should be capable of withstanding the impact load without causing catastrophic failures or penetration that can cause damage to structural members or pilots and passengers. Significant savings in money and time can be achieved by using state of the art modeling tools rather than expensive, time-consuming full scale testing.

18 | Page 5-20

Design and manufacturing of composites with required dimensions has become crucial in the assembly line of polymer-based composite structures. Control over dimensional tolerance in large parts is imperative in order to effectively assemble and integrate composite systems. Failure to control the dimensional tolerance may result in uneven composite assemblies that must be either repaired or rejected. A typical approach used to reduce the distortion of composites is to compensate for the distortion by modifying the shape of the tool in the tool design phase. This approach requires a costly trial-and-error period where different molds have to be physically made and tested until the desired final dimensions of the composite part are achieved. In contrast to this costly method, simulation can be utilized to predict the final part shape.

19 | Page 5-21

Once thought of as a niche material that could be used for secondary structures, composite materials, such as laminates and honeycomb structures are now being used for entire fuselages and wings. The objective of this project is to investigate the use of composite material systems and their interactions with paints (thermal effects).

20 | Page 5-22

This project addresses the current change in design decision tools from time consuming, costly physical mock-ups to a multi-collaborative virtual environment combining knowledge-based engineering, behavioral simulation software, computers, and immersive visualization systems. A system and procedural process will be developed to integrate a product lifecycle management database into a virtual environment that allows designers and engineers to share information and access function, operation, safety, ergonomics and other human factors issues by performing changes in real time.

21 | Page 523

It is difficult to track the myriad of perceptions and thought processes that contribute to engineering accomplished through team based design and complex product realization processes. Knowledge management tools that capture the relevant data are available, but these tools do capture not the mind set or specific acuties that produced the outcome. The goal of this project is development of a template to support the effective translation of legacy domain knowledge into systems accessible to modern engineering groups and processes.

22 | Page 5-24

Aircraft icing on the ground is a common occurrence during wintertime and poses a substantial risk to safe aircraft operation during takeoff. A variety of deicing and anti-icing fluids are used to treat ice and snow deposits on aircraft prior to takeoff. This project will develop methodologies and tools to assist aircraft manufacturers in assessing the aerodynamic effects of ground deicing/anti-icing fluids based on the SAE AMS standard.

23 | Page 5-25

The Metallic Materials Properties Development and Standardization Handbook (MMPDS-04) contains joint design allowables for a variety of fasteners installed in metallic materials. There are a number of fasteners of interest to industry that are either not included in the handbook or the values are for fasteners installed in materials other than those desired. This project will generate B-basis design allowables for a number of these fasteners.

24 | Page J-26

Stacked Drilling of Composites and Titanium

Aircraft manufacturing requires drilling of hundreds of thousands of holes in the aircraft. The typical cost of drilling each hole is 11 – 15 cents per hole, with an increase to as high as \$4.00 per hole when using composites stacked with titanium. This project will establish criteria for machining parameters such as feed and speed to maintain hole quality and increase tool life, thus reducing the cost of drilling.

[illegible]

Titanium structure may be joined in a number of ways. Joining titanium components to form tailored blanks and integral structure can save on production costs and offer opportunities to reduce production and supply chain lead times as well as offering flexibility in manufacturing and a reduced part count. This project will evaluate the mechanical properties of titanium components that have been joined by various methods.

26 | Page 5-28

This project will examine the influence of sandwich parameters such as core size, density, and facesheet/core stiffness ratio on the onset and damage growth rate of sandwich composites. The influence of fluid ingress on the onset and damage growth rate of sandwich composites will also be examined, and a test methodology for determination of Mode I fracture toughness and damage growth rates will be developed.

27 | Page 529

Modern innovative composite design and processing techniques related to the use of composite materials in primary aircraft structures have resulted in the need for new materials and/or process technologies to be qualified for structural use. Federal Aviation Administration (FAA) approved B-basis design allowable for Cytec's 5330 out of autoclave curing epoxy prepreg were generated in an earlier project. The FY11 project will develop laminate material properties and allowables where applicable.

Introduction/Summary

The National Center for Aviation Training (NCAT) technical training advisory board will be created to aid the aerospace industry in Kansas and enable training opportunities that allows the Kansas aviation industry to compete in a global economic environment. This board will be called the State Aviation Technical Training Board (SATTB). It will be executed by industrial representatives through an executive committee comprised of representatives from Boeing, Bombardier-Learjet, Cessna, Hawker Beechcraft and Spirit AeroSystems. Wichita State University (WSU) and the National Institute for Aviation Research (NIAR) will administer the technical training board. A representative from Wichita Area Technical College (WATC) and a representative from Sedgwick County will also be non-voting members of the board to coordinate activities with the training offered by WATC as well as equipment of other infrastructure concerns within the NCAT building.

Each program year, the industry's most pressing training needs will be identified by industry representatives on the executive committee and will be matched to existing expertise within Kansas to offer unique training opportunities within the aerospace cluster in Kansas. The equipment funded via this program will be selected from the five member aviation industry executive committee. Each equipment purchase will be selected with a budget and tied to definitive training deliverables to increase competitiveness within Kansas. WSU will work closely with industry representatives who serve as points of contact and monitor the progress of the equipment purchases along with the link to the training opportunities for the aerospace cluster. WSU will provide a summary report each year which details expenditures made as part of this program to the board and legislature.

Aviation Board Members

John Dieker

Vice President of Operations

Bombardier-Learjet

Jim Walters

Senior Vice-President, Human Resources

Cessna Aircraft

Jeff Turner

President and CEO

Spirit AeroSystems

Jeff Jones

Vice President, Safety Quality, Training, Mfg Tech

Hawker Beechcraft

Brad Gorsuch

Director of Operations

Boeing Defense, Space & Security

Bill Buchanan

County Manager

Sedgwick County Government

Ray Frederick

Interim President

Wichita Area Technical College

Board Administrator

John Tomblin

Executive Director, NIAR

Wichita State University

Legislative Language

"That during the fiscal year ending June 30, 2011, notwithstanding the provisions of any other statute, in addition to the other purposes for which expenditures may be made from the aviation infrastructure account of the state economic development initiatives fund for fiscal year 2011 by Wichita State University by this or other appropriation act of the 2010 regular session of the legislature, the moneys appropriated in the aviation infrastructure account of the state economic development initiatives fund for fiscal year 2011 may only be expended for training equipment expenditures of the National Center for Aviation Training.

(d) During the fiscal years ending June 30, 2010, and June 30, 2011, in addition to the other purposes for which expenditures may be made by Wichita State University from moneys appropriated from the state general fund or any special revenue fund for the above agency for fiscal year 2010 or fiscal year 2011 by chapter 124 or chapter 144 of the 2009 Session Laws of Kansas, or by this or other appropriation act of the 2010 regular session of the legislature, expenditures shall be made by Wichita State University from the state general fund or from any special revenue fund for fiscal year 2010 and fiscal year 2011, after consultation with the National Institute for Aviation Research, to provide for the establishment of a technical training board: Provided, That, except as otherwise provided in this subsection (d), such board shall be similar in composition to the aviation research board and shall advise the president of Wichita State University, and others representing Wichita State University, on all expenditures from the aviation infrastructure account of the state economic development initiatives fund for fiscal year 2010 and fiscal year 2011: Provided further, That such board shall review and evaluate all such expenditures: And provided further, That the executive director of the National Institute for Aviation Research shall be the administrator for the technical training board: And provided further, That the membership of the technical training board shall include representatives of Sedgwick County and representatives of the Wichita Area Technical College as ex-officio, nonvoting members: And provided further, That the technical training board shall prepare and submit a report to the legislature, which shall be presented to the education budget committee of the house of representatives and to the appropriate subcommittee of the ways and means committee of the senate, not later than the 10th calendar day of the 2011 regular session of the legislature, detailing the findings of the technical training board regarding the expenditures by Wichita State University from the aviation infrastructure account of the state economic development initiatives fund for fiscal year 2010 and fiscal year 2011."

SATTB Operational Flow

Board advisory to what organization	The President of Wichita State University, and others representing Wichita State university
Board Membership	Such board shall be similar in composition to the aviation research board; 1 member from each OEM, SEDCO and WATC as non voting members
Executive Director	The Executive Director of the National Institute for Aviation Research shall be the administrator for the technical training board
Expenditures from the aviation infrastructure account of the state economic development initiatives fund	Expenditures shall be made by Wichita State University following all State of Kansas guidelines from the state general fund or from any special revenue fund
Reporting	Executive Director of SATTB prepares and SATTB approves

State of Kansas and Wichita State University Purchasing Guidelines

The following is a summary of the Wichita State University purchasing guidelines. Details may be found in chapter 14 of the Wichita State University Policies and Procedures Manual (http://webs.wichita.edu/inaudit/ch_14.htm).

General Purchasing Policies

All purchases of materials and contractual services in the amount of \$5,000 or more will be made by the Office of Purchasing. This office also manages and controls the system for direct departmental purchases less than \$5,000. The Office of Purchasing establishes contractual service agreements for professional services and service maintenance agreements and maintain all statewide open-end contracts. The Office of Purchasing cannot purchase items for individuals for their personal use and as a general policy, no University purchase orders will be awarded to University employees.

State Contracts for Supplies and Services:

Contracts for commonly used equipment, supplies, and services have been developed by the State of Kansas Division of Purchases. A complete listing of state contracts is available at the Office of Purchasing. Copies and updates of these contracts are maintained by the Office of Purchasing and are forwarded to departments expected to have need for the items covered by the contract. State contracts for commonly used equipment and materials must be utilized unless it can be clearly demonstrated that an alternative purchase would be in the best interest of the University. Approval by the Office of Purchasing is required when deviating from this policy, **prior to acquisition**.

Used Equipment:

The University does not generally purchase used equipment. However, if it can be demonstrated that it is advantageous to do so, used equipment may be purchased from an established and reliable vendor of the type of equipment to be purchased. Normal purchase procedures are required for this type of purchase.

Purchases Less Than \$5,000

Many items are required to be purchased using state or local contracts, University sources, Kansas State Use Catalog, or otherwise require advance approval from the University, the Kansas Board of Regents. For those goods and services that are not available from one of the above sources, departments may be authorized to make purchases direct from any vendor when the delivered

dollar value of the purchase is less than \$5,000, no additional orders for like products or services will be placed again within 30 days (which would make the overall accumulated purchase exceed the \$5,000 limit), or the purchase of the desired product or service is not otherwise restricted. Departments are responsible for checking to see if their desired purchases are restricted items and are encouraged to contact the Office of Purchasing for help in doing so.

Some contracts allow for an exception to be granted prior to purchase for items that are on contract, but are found at a lower price elsewhere with the same quality and specifications. A Prior Authorization for Off-Contract Purchase form shall be completed by the department and submitted, along with an indication of the funding source, to the Office of Purchasing for consideration. Certain items such as personal computer systems and certain vendors such as those in the Kansas State Use Catalog are not subject to granting of this exception.

The Office of Internal Audit and the Office of Purchasing will conduct periodic audits to determine whether or not items are being purchased that are available from University sources or from state-contracted vendors, unauthorized items are being purchased, and/or purchases are being split up into increments of less than \$5,000 (in order to bypass procedures for larger purchases). They will also check to see how effectively departments are making follow-up inquiries to obtain credit on tax charged by vendors, accurate and prompt notification of items to the University's Accounts Payable Department, and whether adequate departmental control records are being kept. Departmental delegated purchasing authority can and will be revoked by the Director of Purchasing if found to be abused or used irresponsibly.

Purchases Greater Than \$5,000

Competitive bids on purchases of \$5,000 or more, including purchases using research or grant funds, will be obtained by the Office of Purchasing, either by telephone or written request. The processing time for award of a purchase order could be a few days to multiple weeks depending upon the complexity of the purchase. The Office of Purchasing will conduct all negotiations with vendors in cooperation with the respective department. All bids, regardless of the source of funds, that are estimated to be in the amount of \$50,000 or more, must be advertised and open for a minimum of two (2) weeks and processed with the receipt of formal written bids.

Specifications

The Office of Purchasing has authority to challenge an ordering department concerning the quality, quantity, and type of material requested in order to serve the best interests of the University. However, the final decision and the

responsibility for justification of the quality and quantity rests with the user department. A department will not be asked to accept inferior products, only to evaluate recommended alternatives.

Preparing Specifications:

Specifications should be developed with the knowledge that a bid shall be awarded to the bidder who submits the lowest price for a good or service that meets the stated specifications with delivery within a time frame that meets the University's need and is reasonable for the particular industry under current market conditions.

In obtaining material or equipment which meets the requirements for performance and quality, the preparation of clear and complete specifications is essential. Specifications may be as simple as a list of requirements that could be described over the telephone, or very complex requiring detailed explanation in writing. Kansas statutes prohibit specifications from being fixed in a manner to effectively exclude any responsible bidder from offering a comparable product or service. The Office of Purchasing will assist in the preparation of specifications upon request.

In general, specifications should be as simple as possible while specific enough to assure that no loophole exists by which a vendor may take advantage of competitors or the buyer. Specify the brand and model number of the desired equipment (e.g, Model 351OD ATT facsimile or equivalent) including the names and model numbers of two or more manufacturers whenever possible. Identify the features and/or characteristics considered essential to the function or intended use of the product. Flexible specifications allow more competition and better pricing.

Specifications should be edited for nonessential proprietary features or characteristics of the named brands which tend to effectively exclude competition in bidding. Minor deviations in size and operational characteristics from those set forth in the specifications will be considered when such deviations do not deter the user from accomplishing the intended use or function at the desired level of performance.

Ethical Conduct and Vendor Representatives

Departments should always contact more than one vendor whenever possible and be sure to provide each with exactly the same information to obtain multiple price quotes. Inform sales representatives that several sources are being evaluated, but do not discuss the amount budgeted for the purchase or prices offered by competitors. Discuss all aspects of the needed product using a life-cycle approach. Learn about the long-term implications of owning the product with respect to reliability, availability, and cost of maintenance and repairs, operational skills required for its use, trade-in-value of unit at the end of cycle, energy consumption, and other such operating concerns. Have the vendor provide all of the technical information needed to write a complete and detailed

specification. Be wary of overreacting to vendor-created crises that call for a hasty decision such as an upcoming price increase or potential stock-out of the desired product and do not offer verbal commitments to buy (the University is committed only by means of an authorized purchase order). The purchase requisition should be submitted as early as possible and should include pertinent information about the suggested vendor such as the name of the company, their representative, address, and telephone and fax number.

Conflict of Interest:

The State of Kansas has statutory laws covering gratuities and conflict of interest which provide that, among other things, no state employee in his or her capacity shall participate in the making of a contract with any person or business with which the employee has a substantial interest. No employee of the State of Kansas may accept gifts, gratuities, or special discounts from persons or firms having business with any state agency or governmental entity. These laws apply to all individuals on the state payroll, regardless of the type of funds used (general use, restricted fees, research, endowment, etc.). Only gifts donated to the University through the WSU Foundation are acceptable.

Externally Sponsored Research Programs

Procurement for externally sponsored research programs must comply with the following: University policies; state or federal laws and regulations; and requirements of the funding source. All procurement for externally sponsored research programs will be processed through the Office of Purchasing. Federal procurement standards¹ and any special constraints imposed by the sponsoring agency must be observed. Expenditures require funding approval from the Office of Research Administration and all applicable research budgets and purchasing requisitions shall be routed through the Office of Research Administration prior to forwarding to the Office of Purchasing.

Ordering From Kansas Correctional Industries and Organizations Listed with the Kansas State Use Catalog

There are a number of products and services available from certain state agencies and organizations listed with the Kansas State Use Catalog. Kansas law mandates that such suppliers be used by other state agencies. If the suppliers are unable to supply the product ordered or cannot meet delivery requirements, the ordering department will be notified immediately and the Office of Purchasing will work with the department to obtain the required statutory exceptions to proceed pursuant to normal purchasing policies and procedures. Departments seeking an exemption for the procurement of consumable supplies or services may do so through the Office of Purchasing on a case-by-case basis. If an exemption is granted, a copy of the written approval must accompany the purchase requisition.

Anti-Kickback

Purpose:

To state University policy with regard to the establishment of procedures designed to prevent and detect possible violations of 41 U.S. Code Sections 51-58 (the Anti-Kickback Act of 1986).

Preamble:

The Anti-Kickback Act of 1986 was passed to deter subcontractors from making payments, and contractors from accepting payments, for the purpose of improperly obtaining or rewarding favorable treatment in connection with a contract or contractual action entered into by the United States for the purpose of obtaining supplies, materials, equipment, or service of any kind.

Policy Statement:

1. When the University has reasonable grounds to believe that a violation of the Anti-Kickback Act of 1986 may have occurred, the University shall promptly report in writing the possible violation. Such reports shall be made to the inspector general of the contracting department or agency of the United States, the head of the contracting department or agency of the United States if the department or agency does not have an inspector general, or the Department of Justice.
2. The University shall cooperate fully with any Federal agency investigating a possible violation of the Anti-Kickback Act of 1986.
3. The University shall incorporate the following language in all subcontracts entered into by the University to obtain supplies, materials, equipment, or service of any kind in connection with a University contract with a department or agency of the United States that exceed \$100,000.
 - a. When the university has reasonable grounds to believe that a violation of the Anti-Kickback Act of 1986 may have occurred, the university shall promptly report in writing the possible violation. Such reports shall be made to the inspector general of the contracting department or agency of the United States, the head of the contracting department or agency of the United States if the department or agency does not have an inspector general, or the Department of Justice.
 - b. The university shall cooperate fully with any Federal agency investigating a possible violation of the Anti-Kickback Act of 1986.

- c. The Contracting Officer may (1) offset the amount of the kickback against any monies owed by the United States under the prime contract and/or (2) direct that the Prime Contractor withhold from sums owed a contractor under the prime contract the amount of the kickback. The Contracting Officer may order that monies withheld under subdivision c. (1) of this clause be paid over to the United States Government unless the Government has already offset those monies under subdivision c. (2) of this clause. In either case, the Prime Contractor shall notify the Contracting Officer when the monies are withheld.
- d. The university agrees to incorporate the substance of this clause, including subparagraph d., in all subcontracts under this contract which exceed \$100,000.

6-12

Protocol and Timeline for Equipment Expenditures

1. Initial equipment list will be collected by NIAR/WSU from WATC, Sedgwick County, WSU/NIAR and any aviation company which describes specific training needs. This list will be developed prior to the first board meeting each year with the following information:

- (1) Detailed Equipment Description
- (2) Estimated Cost
- (3) Justification for equipment in supporting the training needs of the aviation industry

Timeframe : July / August

2. This equipment list will be combined and summarized prior to the SATTB board meeting for board member review prior to the meeting. This will be sent to each board member via email at least two weeks prior to the SATTB board meeting. These should be prioritized by the aviation industry to fit within the available yearly budget.

Timeframe : August / September

3. The SATTB board meeting will approve an equipment expenditure list along with an estimated budget for purchasing.

Timeframe : August / September SATTB Board Meeting

4. Approval by the President of WSU (or others representing WSU)

Timeframe : following August / September SATTB Board Meeting

5. Following the State of Kansas and WSU procurement guidelines, purchases will be made according to the approved equipment list. A monthly update will be provided via email to all board members showing an estimated versus actual cost. This monthly update will also be transmitted to the SCTETA board for inclusion in their monthly meeting.

Timeframe : September through December

6. SATTB board meeting to review progress to date and reconciliation of any open action items. Final expenditure plan approved for the existing or anticipated balance of the equipment funds. Draft of the expenditure report to the legislature to be reviewed at that time.

Timeframe : December SATTB Board Meeting

7. Approval by the President of WSU (or others representing WSU)

Timeframe : following December SATTB Board Meeting

8. Report prepared and delivered to KS legislature by WSU

Timeframe : January

9. Finalized purchasing per the SATTB board approved expenditure plan

Timeframe : January through June

10. Updated final report for the SATTB board and KS legislature

Timeframe : July

NCAT FACILITY

The National Center for Aviation Training built by Sedgwick County fuses Kansas' aviation experience and expertise with cutting-edge instructional techniques and technology to forge a new educational standard. The 224,000 sq. ft. facility will provide for significant growth capacity for students to engage in aviation and advanced manufacturing training along with strong FAA involvement and support. The \$50 million campus offers capacity to train up to 1,500 students and the Jabara Airport location allows ready access to aircraft for hands-on training.

Figures 1 – 3 show the layout of the facility along with the specific curriculum areas being focused on with these equipment expenditures. All equipment purchases using these funds will be located in the NCAT facilities.

		\$ 5,000,000.00	\$ 5,000,000.00

EQUIPMENT DESCRIPTION CORRESPONDING TO
AVIATION INDUSTRY NEED

6-25

ANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
CAD/CAM - CATIA			
	DVI System	\$56,100	This system allows the instructor display to be projected out to all of the students' displays. When teaching CATIA, FiberSim, Analysis, etc. type courses the icons and options are fairly small. The projector(s) in each room helps to demonstrate the use of the software when teaching however in a lot of cases it can be hard for the attendees to see the screen clearly enough from the 2nd and 3rd row of the classroom. In addition, it allows the instructor to project to just certain students or bring a student's display to the instructor and/or projector. This helps when some students need more demonstration than others or if they have a circumstance that needs to be discussed amongst the group. We have a similar system although it is VGA in some of our rooms at NIAR and it has proven to be very beneficial for the attendees. This will make these three labs equivalent to M167.
	Monitors/Room Speakers	\$16,000	<p>Some of the industry style courses are providing materials in an electronic form or are providing videos for the students to watch as they work. In addition, some of the instruction is done in a follow along fashion. The issue that arises is that it is very hard for the attendees to watch the instructor work and be able to work on the their machine at the same time. With dual monitors, this allows for an area to project the instructor's display to and/or to be used for pdf's or videos while the student does the work alongside on their first display.</p> <p>Front wall mounted speakers and all necessary audio hook ups for instructor computer along with laptop hook up. This would be nice for when you are presenting something to a class requiring sound.</p>
	Commercial Licenses	\$90,000	More and more companies are asking us to help with various projects that require commercial licenses. We have the personnel and computer resources to help with these projects but the cost of commercial licenses makes it hard to ramp up effectively. With these in place we can help industry with their overload situations without them having to go outside of Kansas or hire a lot of people for a short term.

6-26

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
CAD/CAM - CATIA			
	High End Workstations	\$11,500	Three high end workstations for working with industry level CAD data. Allows us to handle the large data packages used by the aviation industry in order to better understand their requirements.
	Portable Inspection Devices and Scanning Head And Laser Tracker and Laser Scanning Technologies	\$100,000 \$280,000	We are doing more and more reverse engineering and we don't have easy access to the laser scanning equipment necessary to perform the job. We hope to get this equipment and be able to not only use it on projects but to integrate it with our CATIA labs to provide training on the use of reverse engineering software and its integration with CATIA. This is becoming more and more of a need in industry due to a lot of companies inspecting back to a 3D model instead of a printed drawing.
Composites			
	Laser Projection	\$82,500	Composite manufacturing industries are swiftly moving to the use of laser technology to ensure the most accurate ply orientation and ply placement during composite parts fabrication. With the purchase of this equipment WATC can create an advanced composite course. Graduates of the advanced course will provide composite manufactures with trained personnel capable of operating, maintaining and programming laser projection equipment.
	Debulk and Cure Tables	\$24,000	The cure tables will be used to cure laminates instead of using the ovens and autoclaves. This saves money and reduces landfill waste from the bagging supplies normally used during an oven cure operation. During fabrication, many of the new "out of autoclave" resin systems are dependent on multiple debulk cycles. The debulk tables reduce debulk time and the cost and waste of bagging materials used during debulk cycles.
	Micro Duster Air Filtration	\$26,000	The Micro dusters are needed to help insure the dust particle counts are at levels equal or better than industry clean rooms. The Micro Duster filters will be placed near the two ply cutting machines in the large layup room.

6-27

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Composites			
	3' x 3' Oven	\$20,000	The oven will have the same controller used for large ovens used in industry. This controller is capable of multi segment programming and programmed heat up/ ramp rates. Compared to the large ovens, this smaller oven is more efficient for small batch cure cycles and training of oven operation. The oven will be set up with a communications port so data / cure cycles can be archived in the same manner as the factory.
	Saws	\$13,500	The industrial saws selected for purchase are heavy duty construction. The same saws are used in industry to cut and trim composite parts and assemblies. Training on industry equipment and understanding how to safely operate and maintain this equipment prior to using them in the factory is important.
	Processing and Storage	\$97,021	This purchase would cover several items including: 1) room surveillance equipment that provides the ability to monitor, record and archive the time, date, temperature and humidity of all the rooms and freezer at NCAT 2) a dust particle collection pump providing the capability to measure air quality in the layup rooms. Air quality is a requirement of composite manufacturing and students will be trained in the importance of checking it 3) all appropriate safety equipment is included in this budget. Students must be trained to understand and properly use all safety equipment.
Advanced Manufacturing/Robotics			
	Basic/Advanced Programmable Logic Controls Equipment	\$98,000	These are beginning pieces of equipment will allow training to begin in PLC for industry and will allow the Robotics program to begin with the first certificate of completion of PLC for students interested in the Robotics AAS degree.
	Industrial Instrumentation Trainers	\$112,000	These trainers will provide the basic equipment needed to begin teaching several classes in the Robotics program. Needed for the first semester of the program.
	Introductory Robotics Programming Equipment	\$16,000	This system will provide the basic introductory equipment for ROB100 - this course is used in Robotics Technology and Electromechanical Systems.

6-28

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Advanced Manufacturing/Robotics			
	Material Handling and Machining Robot	\$100,000	To teach the student how to pick and place a part using vacuum. How to use auxiliary equipment to aid the robot in processing the part, to make use of interchangeable tooling to use the robot for multiple functions, and to machine a part using a pneumatic router. This cell will use vision to locate the shapes to be routed. It will also introduce advanced functions such as program shift and user frames to allow the student to teach a program on process stand #1 and transfer it to process stand #2. This robot is in the number one priority space because it will be used in ROB 100 which is required for both Robotics Program and Electromechanical Systems Technology Program .

6-29

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Advanced Manufacturing/Robotics			
	Robotic Rail System And e-NDE Process Control And Robotic End Effector for Composite Drilling	\$90,000	<p>Rail system will be used for facilitating interaction between the robots and the MTS FSW welder to achieve fully automated robotic cell. Students will receive education and training in coordinated robotic motion in a robotic cell equipped with industry-capable robots and manufacturing systems. The robot rail system will enable the currently installed lab robots to interact as well as to operate independently. It will provide a seventh axis to the ABB IRB 6600 robot, allowing it to interact with the ABB IRB 7700 robot and other production-capable lab equipment. Students will first learn to program the lab robots and to define their coordinated motion with CAD/CAM software. They will then learn to actually operate the robots for coordinated tasks to carry out drilling, fastening, welding, and other advanced automated assembly operations. Research will be carried out in advanced assembly and joining processing for aircraft structure development and maintenance.</p> <p>Students and researchers will receive education and training in advanced e-NDE (electronic Non-destructive Evaluation) techniques for joining and processing technologies. These new techniques are based on process monitoring and have been shown to increase the accuracy and precision of probability of detection (POD) analyses when compared to conventional inspection techniques for friction stir welding, for example. In FSW the transverse force feedback signal is correlated with defect formation. e-NDE is a real-time, non-destructive "green" evaluation system for predicting weld quality using feedback signals monitored during the welding process. It provides a control system with important feedback information about joint quality. The control system will be used in research to analyze the process parameters in terms of the feedback information to certify sound, flawless joints. Research will be conducted to extend e-NDE to real-time inspection to reduce and potentially eliminate the need for secondary inspection operations like X-ray, and ultrasonic inspection steps. Students will receive education and training in robotic drilling and machining of composites for fastening composites to composites and composites to metals. An advanced orbital end effector will give students experience in drilling through multiple layer stack-ups of composites and metals with state-of-the-art equipment. The system will provide researchers and developers with instrumented equipment for evaluating cutters and procedures for drilling advanced materials. Tooling and flexible fixturing components and units designed to enable the drilling of complex aircraft components will ensure students are trained in real-life applications.</p>

6-30

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Machining			
	Clausing Colchester Lathes	\$55,700	To serve students in lab and match machines purchased in FY2010.
	Bridgeport Mills	\$110,000	To update all mill machines in lab to current standard equipment.
	HAAS SR100 Router	\$40,212	Entrusted equipment from Haas; if not purchased by spring 2011, equipment will be removed by Haas and not replaced.
	Haas VF-2S5TR Vertical Machining Center w/ 5 axis capability	\$96,579	Entrusted equipment from Haas; if not purchased by spring 2011, equipment will be removed by Haas and not replaced.
	Haas VF-2S5TR Vertical Machining Center w/ 2 axis capability	\$68,112	Entrusted equipment from Haas; if not purchased by spring 2011, equipment will be removed by Haas and not replaced.
Paint Applications and Advanced Coatings			
	Paint Application Equipment	\$45,956	Spray guns and equipment used for application of interior and exterior aircraft coatings. Equipment is used in aircraft industry by paint suppliers, OEM's, and refinishers. Equipment covers variety of application methods used for items from small parts to full aircraft.
	Color Technology	\$89,662	Equipment used by aircraft paint suppliers, OEM's, refinish shops to develop color matches in standard and special effect coatings, and equipment used by aircraft paint suppliers and OEM's to evaluate color evaluation skill of technicians and painters.

6-31

MANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Paint Applications and Advanced Coatings			
	Materials/ Material Handling	\$56,499	Equipment used to prepare aircraft surfaces prior to coating application and to detail finished coating film. Equipment includes materials for masking, sanding, design layout, polishing and cleaning.
	Safety/Maintenance	\$20,266	Supplies for set-up, use, and maintenance of aerospace applications equipment.
	Storage	\$29,073	Equipment for storage of materials, tools, test equipment, etc.
	Paint Testing Equipment	\$36,544	Equipment used by aircraft paint suppliers, OEM's, refinish shops to develop color matches in standard and special effect coatings and testing equipment used to measure various properties of painted objects and for measurements during coatings application process.
	Corrosion Test Chamber	\$23,740	Used for general testing of coatings and especially newer non-chrome primer technologies. Required by industry coatings specifications.
	Environmental Exposure Chambers	\$75,607	Used to stress coated panels at extremes of temperature, at programmed intervals to simulate changes in climate due to altitude and test humidity resistance of painted parts. Testing is requirement of military and OEM specifications.
	Test Equipment	\$28,033	Used by aerospace paint suppliers, military, and OEM's to study tensile properties of films of paint, adhesives, and sealants.
	Weathering Chambers	\$77,897	Used for accelerated weathering testing of painted panels, product development and approval. Commonly used by aircraft paint suppliers, military, and OEM's to test and approve coatings for use on aircraft.
	Installation/Maintenance	\$9,685	Installation of machinery, access to water and/or electricity required for operation.

6-22

ANUFACTURING			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Paint Applications and Advanced Coatings			
	Test Chambers	\$13,371	To work with the paint booth and mixing room in the Paint lab in order to meet competencies outlined in the Paint program.
	Materials/ Material Handling	\$34,843	Supply lab for instruction on aircraft coatings blending and testing of wet and cured coatings. Equipment is representative of tools operated by lab technicians, engineers, and painters in the aircraft industry.
	Safety/ Maintenance	\$4,591	Safety and maintenance equipment for lab exercises.
	Test Equipment	\$36,688	Supply lab for instruction on aircraft coatings blending and testing of wet and cured coatings. Equipment is representative of tools operated by lab technicians, engineers, and painters in the aircraft industry.
	Installation	\$1,500	Installation of machinery, access to water and/or electricity required for operation.
Electromechanical/Mechanical Systems			
	Safety	\$6,900	IND 100 Industrial Safety training will be provided in the first semester of the Electormechanical Systems program.
	Direct and Alternating Current	46,500	IND 106 Direct and Alternating Current Circuits provided for training in electrical circuitry used in aviation production. Needed in the first semester of the Electormechanical Systems program.
	Industrial Wiring	\$4,800	IND 108 Industrial Wiring provides training for electrical wiring used in maintenance and repair of aviation production processes. Needed in the first semester of the Electormechanical Systems program.
	DC and AC Motors and Motor Control	\$54,850	IND 110 DC and AC Motors and IND 112 Fundamentals of Motor Controls - provides for training in the repair and maintenance of motors used in aviation production processes. Needed in the first semester of the Electormechanical Systems program.

6-32

AVIATION MAINTENANCE			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Avionics			
	Digital Training System	\$139,198	Simulators and test stations in order to create a teaching and learning environment for students for digital training of avionics instruction.
Airframe/Powerplant			
	Systems Trainers, Cut Away Articles	\$67,176	Trainers to assist with teaching of hydraulic, pressurization anti-skid and air conditioning for Airframe I and II students.
	Weld Shop Supplies	\$14,342	Tables, storage and vises for the welding shop for Airframe I and II students.
	Student Test Articles and Test Equipment	\$36,231	Pilot static system trainer for Airframe I and II students.
	Component Trainers	\$100,755	Trainers for voltage, brake drums, master cylinders, generators, starters, alternators, calipers and brake systems for Airframe I and II students.
	Power Plant Trainers	\$138,044	Trainers that simulate fuel systems carburetion, injection, electrical and thrust reverse for Powerplant I and II students.
	Power Plant Equipment and Tools	\$141,847	Instructor tools, generator test bench, valve grinder and compression tools, engine test kits and tools for Powerplant I and II students.
	Propeller Equipment and Training Articles	\$14,169	Propeller blade trainers, drive units and blade prop storage.
	Powerplant Articles (Engines)	\$1,063,384	New engines (Lycoming and Pratt Whitney) and tools for Powerplant I and II students to provide real world learning experiences on a variety of engines.

48-9

AVIATION MAINTENANCE			
Curriculum	Equipment	Approved Budget	E Equipment Description Corresponding with Industry Need
Airframe/Powerplant			
	Supplies to Sustain Engines/Support Rebuilds	\$82,098	Overhaul kits to enable the ability for students to re-build engines in existing planes. All supplies will be used in Powerplant I and II to teach re-building of turbine and reciprocating engines.
	Student Component Trainer Supplies	\$80,120	Carburetor, magneto overhaul kits for turbine and reciprocating engines for Powerplant I and II
	Hanger Maintenance, Tools and Supplies	\$95,879	Pressure washer, Instructor tool sets, tool crib toolset, assorted hardware and high-temp degreaser cleaner to meet competencies for students in the General portion of the A&P program.
	Training Materials for Aircraft and Aircraft Support	\$61,769	Tools and equipment needed for support of all aviation programs that utilize the hanger.
	Support Items for All Labs and Hanger	\$17,775	Support items for the labs and hanger for the aviation programs.
	Battery Shop	\$8,635	Aircraft batteries, battery charger and workbenches for the Powerplant I and II students.

6-35

AVIATION MAINTENANCE			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Non-Destructive Inspection			
	Lubricant Spectrometer, FTIR Analyzer, Viscometer, and Particle Counter	\$135,000	Simultaneous analysis of multiple wear metals in aircraft engine oil, analyze aircraft engine oil for oxidation, nitration, sulfation, water, coolant, fuel, soot, and additive depletion, determine the viscosity of aircraft lubricants, count wear metal particles in aircraft lubricating fluids and identify them with shape recognition software. This equipment is used to analyze engine and hydraulic fluids for serviceability in support of Airframe and Powerplant training. This type of analysis is common during aircraft servicing and troubleshooting. Cross over applications include ground transportation, oil and gas processing, agribusiness food and feed manufacture, chemical industries, and power generation. Students will learn to operate and calibrate instruments to industry specifications. Further instruction will be given on test result interpretation, failure levels, predicting failure timelines, determining preventative maintenance practices and their intervals.
	Vibration Analyzer and Software	\$51,000	Monitors and analyzes aircraft engine bearing for wear or damage. Vibration analysis can be used to identify causes of vibration (propellers, turbines, accessories) that lead to noise, structural fatigue and crew discomfort. Vibration analysis is used on both new products and on aircraft undergoing service. Cross over applications include ground transportation, oil and gas processing, agribusiness food and feed manufacture, chemical industries, and power generation. Students will learn to operate and calibrate instruments to industry specifications. Further instruction will be given on test result interpretation, failure levels, predicting failure timelines, determining preventative maintenance practices and their intervals.
	Thermal Imaging Cameras	\$34,000	Large area scanning for disbond and delaminated aircraft surfaces is especially important as more composite structures are introduced into service. This is a newer technology that is starting to be used more within the aircraft industry because of the speed and accuracy at which bonded structures can be evaluated. A secondary use is for aircraft electrical system scanning for heat producing electrical problems. Cross over applications include ground transportation and power generation. Students will learn to operate and calibrate instruments to industry specifications.

989

AVIATION MAINTENANCE			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Non-Destructive Inspection			
	Acoustic Emission System	\$13,500	In-service monitoring of aircraft structures, particularly composite structures. The technology is designed to monitor structures while in service in real time or in capture time elapsed. This technology has been evolving for many years and is becoming more mature leading to its acceptance as a viable method of structural monitoring. Acoustic emission technology is vital to research efforts on aging aircraft structures and is also the leading technology in research being done on wind power generation structures. Cross over applications include ground transportation and power generation. Students will learn to operate and calibrate instruments to industry specifications. Further instruction will be given on installation and interpretation.
	Eddy Current	\$45,500	The Eddy Array modules add another capability to the ultrasonic phased array system. With the addition of the Eddy Array modules, the students will be able to take full advantage of the existing equipment for both education and also the industry research endeavors on the manufacture and repair of composite aircraft surfaces. Cross over applications include ground transportation, oil and gas processing, agribusiness food and feed manufacture, chemical industries, and power generation. Students will learn to operate and calibrate instruments to industry specifications.
NCAT GENERAL			
Data Center			
	Desktop Virtualization	\$152,349	Used to run any aviation industry programs/software at NCAT. Rapidly reconfigure NCAT computer labs for aviation industry training.
Classrooms			
	Computers	\$125,000	Replace outdated NCAT student computers to keep up with aviation industry standards.

6-37

NCAT GENERAL			
Curriculum	Equipment	Approved Budget	Equipment Description Corresponding with Industry Need
Distance Learning			
	HD Monitors, Cameras, Speakers, Microphones, Software, Video Equipment	\$80,000	Equip classrooms at NCAT to accommodate video conferencing, video recording and interactive distance learning to train aviation workers remotely.
