

Dear Sen. Gossage et al: I support this Bill because it is inconceivable that We-The-People would not have a conscientious right to refuse anything, including but not limited to invasive procedures (which a vaccination is) which have not been demonstrated to be essential for the health of our society. There's a reason there's no federal law mandating vaccines for children. We put it in the power of the states. The KDHE simply wants more and more power. Until the Covid horror happened with the push-through of "The Jab", Americans had trusted their health-care institutions. That's gone now.

Kathy Brown, Esq.
