SB19

PROPONENT

IN PERSON TESTIMONY TO PUBLIC HEALTH AND WELFARE COMMITTEE

FESTUS J. KREBS III MD MBA

Chairwoman Gossage and Distinguished Members of the Committee:

My name is Festus Krebs III and I am a Kansas citizen and a currently licensed medical doctor and proponent of SB19.

Recently most of the population was forced to accept injections of a new genetic transfer material called mRNA, which was labeled “safe and effective”. Many who refused were required to leave school, quit or be fired from their jobs, or face severe recriminations. Over the last three years, hundreds of reports have shown that this injection was of little to no benefit to any of the population worldwide, and in fact has caused millions of deaths and chronic diseases of adults and children. It has become the single greatest manmade medico-biological disaster in US history. And it was mandated.

Adverse outcomes to vaccinations are not restricted to the new mRNA injections. It should be pointed out that the current CDC-recommended vaccination schedule for children includes almost 80 injections by age 18. Recent scrutiny of the adverse outcomes of the many vaccines in this schedule is being conducted and the results are truly worrisome.

SB19 will prevent a recurrence of this type of disastrous outcome for the people of Kansas, partly by reinstating patient bodily autonomy and the legal requirement of informed consent of the patient, or parent of the child.

I thank you for your time and consideration.

Festus J. Krebs III MD MBA
