

Department for Aging and Disability Services

Senate Ways and Means Committee Meeting January 24, 2013

Overview of the Governor's Mental Health Initiative

Presented by:

Shawn Sullivan, Secretary
Kansas Department for Aging and Disability Services

Need for Mental Health programs

- Mental health is as important as physical health.
 - Estimated that 1 in 5 individuals will be affected at some point in their life by a mental illness.
- Important to recognize the value of mental health in our overall health delivery system.
- If persons with mental illness do not receive treatment, their condition can deteriorate.

Need for Mental Health programs

- Deterioration can require higher levels of care and lead to increased contact with:
 - Law enforcement
 - Jails
 - Foster Care system
 - Emergency Rooms
 - State Hospitals

History of Mental Health reform in Kansas

- In 1990, the Legislature passed the Kansas Mental Health Reform Act
- Goal was to decrease reliance on institutional in-patient psychiatric beds and place more focus on community based services.
- Effort was successful.
 - Today, the State of Kansas has a 305 psych beds capacity
- Must continue to evaluate our mental health delivery system and ensure that it is serving current and emerging populations.

Current Mental Health System

- The system for delivering community based mental health services currently consists of 27 mental health centers.
- The mental health centers are responsible for making sure that a core array of mental health services are available in the areas they serve.
- Centers perform a gatekeeping function using specialized staff to "screen" persons who are at the risk of State hospitalization.
- The purpose of the screening is to ensure that clients who need hospitalization get it, and those that don't need hospitalization get services in the least restrictive environment.
- State regulations require mental health centers to provide necessary mental health services to all clients regardless of their ability to pay.

Governor's Mental Health Initiative Proposal

Initiative Funding

- \$10 million dollar initiative
 - \$5 million of grants Community Mental Health Centers (CMHCs) receive will be re-focused to support at-risk consumers.
- Administration proposal will stabilize SGF funding resources for CMHCs
 - Proposal recognizes the loss of Children Initiatives Fund (CIF) dollars that will occur this year that impacts CMHCs.
 - As a result, Administration proposes to preserve the \$5 million CIF dollars with SGF
- Proposal ensures no overall loss of resources to public mental health system in FY 2014

Regional Recovery Support Centers

Creation of regional recovery support centers

- 5-7 community mental health centers will be chosen to serve as the regional recovery support center
 - Resources will be accessible to all CMHCs in the defined region.
- The regional system will provide the means for CMHCs to have access to resources that they can not always afford to provide.
- These resources will focus on engagement, increasing protective factors and quality of life.
- Funding will be distributed based on several factors including:
 - total projected numbers of individuals at risk in the region who could benefit from the regional infrastructure,
 - needs of those individuals,
 - analysis of current CIF allocations

Regional Recovery Support Centers

\$5 million will be used to enhance or develop:

- Intensive case management and care coordination
- Crisis stabilization services
- Parent and Peer support services
- Employment and Housing supports and options
- Evidenced based services including: in-home family therapy and Dialectal behavioral therapy

Target at-risk populations may include:

- Adults or youth with frequent inpatient admissions
- Adults or youth with a mental illness leaving Department of Corrections or youth detention
- Adults or youth with a mental illness who have frequent contact with law enforcement and judicial system
- Adults or youth with dual or co-occurring diagnosis
- Youth who are at risk for entering state custody

Increased effectiveness for at-risk consumers

More effective programs for at-risk consumers

- \$5 million will continue to be allocated to the 27 Kansas Community Mental Health Centers to support at-risk consumers.
- CMHCs must demonstrate outcomes for this targeted population
 - Tax dollars must support effective programs

The Need for Change

- Regional Recovery Support Centers provide new opportunities
 - Expand availability of proven services and professional expertise statewide.
 - -Will allow consumers to receive more specialized and evidenced based services anywhere
 - -This will bring evidence-based practices to rural areas.
 - Equip the mental health system to serve a wider variety of challenges through resource sharing.
 - Encourage a systemic perspective rather than having 27 separate entities.
 - -Potential for more efficiencies and more cost-savings
 - -May generalize to other areas such as administrative functions.

The Need for Change

- Ensuring Accountability for Individual Services
 - Opportunity to know how State dollars are being spent
 - -Increased ability to determine actual costs to serve most challenging individuals.
 - -Increased ability to determine what is actually working/not working
 - ✓ Necessary to help us target how to spend limited resources
 - Re-focus the Mental Health system on serving the most challenging individuals in a community setting.
 - Potential for new resources to be developed

Mental Health Task Force

<u>Creation of a taskforce to comprehensively study Kansas'</u> <u>mental health system</u>

- New taskforce will comprehensively evaluate our current mental health system and make recommendations to transform the system.
- Taskforce will look at best practices to increase protective factors for person with or at risk of mental illness
- Taskforce members will include persons who have experienced recovery as well as professionals from broad multi-disciplinary expertise.

Implementation

- KDADS staff is currently working on developing policy framework.
- KDADS is developing plans for implementation that will include:
 - impact analysis to ensure families currently supported by CIF funds will continue to be supported within the new system of care
 - a stakeholder analysis that will identify who needs to be engaged in implementation
 - communication plan that provides transparency for the process.
- Time-line of events is projected to be developed by February 1, 2013.
